

## **Errata for the 2006 Pedon PC/SRITB Training video (April 3<sup>rd</sup>)**

a. Dwain Daniels is the team leader for the Digital Editing Team  
b. A profile description report has been created and included with Pedon PC 3.0

c. There is a description of how to modify forms provided on the video at 1:04:00 that does work. However, Sal provided some additional information that is very useful. To ensure that all of your edits stick;

1. go to Tools > options > view
2. Check the hidden objects box
3. Look under forms for the f\_phroizon and f\_phorizon2

forms.

4. Open the forms in design view.

5. You may have to right click and choose data sheet view to view the forms as a grid.

6. Now if you make edits and save them, they will definitely “stick”.

7. Remember to keep backups, and make saves often while customizing forms.
