# **Soil Survey of Washoe County, Nevada, Central Part Volume 1**

# How To Use This Soil Survey

## General Soil Map

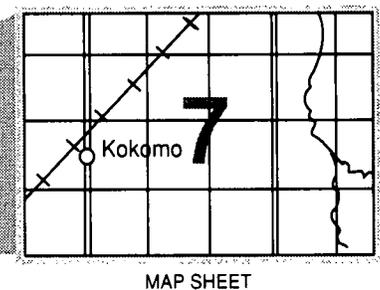

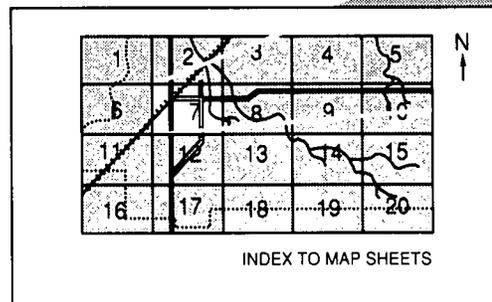

The general soil map, which is the color map preceding the detailed soil maps, shows the survey area divided into groups of associated soils called general soil map units. This map is useful in planning the use and management of large areas.

To find information about your area of interest, locate that area on the map, identify the name of the map unit in the area on the color-coded map legend, then refer to the section **General Soil Map Units** for a general description of the soils in your area.

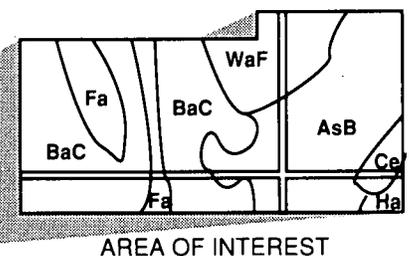

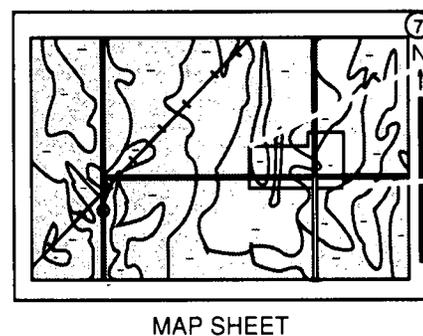

## Detailed Soil Maps

The detailed soil maps follow the general soil map. These maps can be useful in planning the use and management of small areas.

To find information about your area of interest, locate that area on the **Index to Map Sheets**, which precedes the soil maps. Note the number of the map sheet, and turn to that sheet.

Locate your area of interest on the map sheet. Note the map unit symbols that are in that area. Turn to the **Index to Map Units** (see Contents), which lists the map units by symbol and name and shows the page where each map unit is described.

NOTE: Map unit symbols in a soil survey may consist only of numbers or letters, or they may be a combination of numbers and letters.

The **Summary of Tables** shows which table has data on a specific land use for each detailed soil map unit. See **Contents** for sections of this publication that may address your specific needs.

---

This soil survey is a publication of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (formerly the Soil Conservation Service) has leadership for the Federal part of the National Cooperative Soil Survey.

Major fieldwork for this soil survey was completed in 1988. Soil names and descriptions were approved in 1990. Unless otherwise indicated, statements in this publication refer to conditions in the survey area in 1988. This survey was made cooperatively by the United States Department of Agriculture, Natural Resources Conservation Service; the United States Department of the Interior, Bureau of Land Management and Bureau of Indian Affairs; and the University of Nevada, Agricultural Experiment Station. It is part of the technical assistance furnished to the Washoe-Storey Soil Conservation District.

Soil maps in this survey may be copied without permission. Enlargement of these maps, however, could cause misunderstanding of the detail of mapping. If enlarged, maps do not show the small areas of contrasting soils that could have been shown at a larger scale.

All programs and services of the Natural Resources Conservation Service are offered on a nondiscriminatory basis, without regard to race, color, national origin, religion, sex, age, marital status, or handicap.

# Foreword

---

This soil survey contains information that can be used in land-planning programs in the survey area. It contains predictions of soil behavior for selected land uses. The survey also highlights limitations and hazards inherent in the soil, improvements needed to overcome the limitations, and the impact of selected land uses on the environment.

This soil survey is designed for many different users. Farmers, ranchers, foresters, and agronomists can use it to evaluate the potential of the soil and the management needed for maximum food and fiber production. Planners, community officials, engineers, developers, builders, and home buyers can use the survey to plan land use, select sites for construction, and identify special practices needed to ensure proper performance. Conservationists, teachers, students, and specialists in recreation, wildlife management, waste disposal, and pollution control can use the survey to help them understand, protect, and enhance the environment.

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are shallow to bedrock. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

These and many other soil properties that affect land use are described in this soil survey. Broad areas of soils are shown on the general soil map. The location of each soil is shown on the detailed soil maps. Each soil in the survey area is described. Information on specific uses is given for each soil. Help in using this publication and additional information are available at the local office of the Natural Resources Conservation Service or the Cooperative Extension Service.

# Soil Survey of Washoe County, Nevada, Central Part

---

By Edward W. Blake, Natural Resources Conservation Service

Fieldwork by Edward W. Blake, Carl M. Hasty, James F. Spear, Carole E. Jett, and H. David Pickel, Natural Resources Conservation Service

United States Department of Agriculture, Natural Resources Conservation Service,  
in cooperation with  
the United States Department of the Interior, Bureau of Land Management and Bureau of Indian Affairs, and University of Nevada, Agricultural Experiment Station

This survey area is in the northwestern part of Nevada (fig. 1). It has an area of 1,492,538 acres. It is bordered on the west by Lassen County, California, and on the east by Humboldt and Pershing Counties, Nevada. The southern part of the county is included in the "Soil Survey of Washoe County, Nevada, South Part," which was published in 1983.

The public land in the survey area is administered by the United States Department of the Interior, Bureau of Land Management and Bureau of Indian Affairs.

## General Nature of the Survey Area

This section gives general information about the survey area. It describes water supply, economic enterprises, transportation facilities, history, drainage, soil landscapes, geology, and climate.

## Water Supply

Dorothy Palmer, agricultural engineer, Natural Resources Conservation Service, helped prepare this section.

The largest body of water in the survey area is Pyramid Lake, which is within the Pyramid Lake Indian Reservation. The main source of water for Pyramid Lake is the Truckee River. Small tributaries on the east side of the Virginia Mountain Range also drain into the lake. These tributaries are supplied by spring runoff and

convection storms. Pyramid Lake is used mainly for recreation. It also provides habitat for Lahontan cutthroat trout and for cui-ui, an endangered fish species.

The sources of water for the Hualapai farming area are surface runoff and ground water. About 60 percent of the runoff in the survey area occurs as streamflow. After the distribution of seasonal runoff and the infiltration losses along the flow path, about 10 percent of this runoff arrives at points of use. About 40 percent of the runoff in the survey area occurs as local sheet flow, which is not available for use.

Because streamflow is an unpredictable source of water, ground-water wells provide most of the water for agricultural and domestic uses. The depth of these wells varies, depending on the location. Natural springs along the west side of the Granite Range have been developed for irrigation. Also, they are the main source of water for Gerlach.

The source of water for the Buffalo Hills and the Fox Range is the intermittent streamflow provided by spring runoff and convection storms. Smoke and Buffalo Creeks, which are perennial streams in the Buffalo Hills, are sources of irrigation water for some pastures. Because of a lack of upstream water control, most of the runoff from the streamflow eventually ends up on playas, where it evaporates. Natural springs in the mountain ranges throughout the survey area have been developed to provide water for livestock.

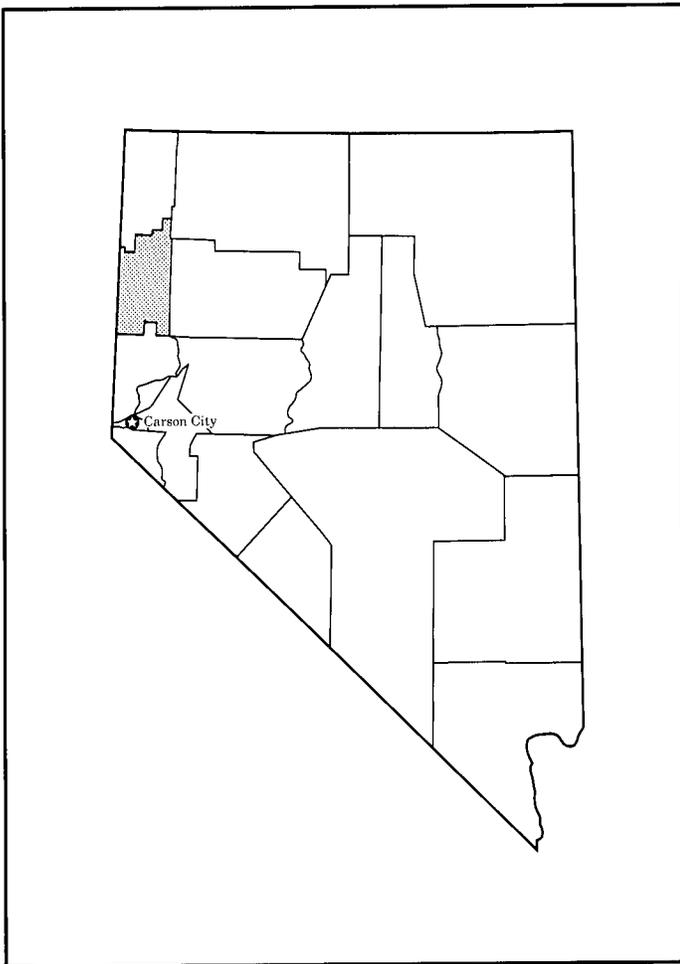

Figure 1.—Location of Washoe County, Central Part, in Nevada.

## Economic Enterprises

John Capurro, district conservationist, Natural Resources Conservation Service, wrote this section.

The main source of employment in manufacturing in the survey area is U.S. Gypsum, which is at Empire, Nevada. For many years, this company has been a major part of the economy of the survey area.

Tourism and gaming make up a small part of the local economy. Gaming revenues are derived mainly from hunting and fishing enthusiasts who pass through Gerlach on their way to the northern part of Washoe County.

Rising prices for precious metals have renewed interest in mining in the general vicinity of the survey area. A large mine adjacent to the northern boundary of the survey area has been in production in recent years. A smaller mine at the northern end of the Lake Range is scheduled to begin production.

Irrigated crop production in the survey area is limited mainly to areas of the Haulapai Valley, the San Emidio Desert, and the extreme eastern part of Honey Lake Valley. Irrigation water for these areas is provided by deep wells and is applied by sprinkler systems. The available water supply limits agricultural production. Therefore, most of the land in these areas is used for livestock grazing.

## Transportation Facilities

John Capurro, district conservationist, Natural Resources Conservation Service, wrote this section.

This survey area is sparsely populated. Most inhabited areas are in remote locations. Consequently, motor vehicles are the primary means of transportation. The existing network of unpaved, improved, all-weather roads serves most of the survey area. State Route 34, a paved highway, provides the primary access to Gerlach. State Route 81 connects Gerlach to Cedarville, California, to the northwest. A railroad crosses the survey area from east to west. Trains make periodic stops in Gerlach.

## History

Charles Welch, civil engineering technician, Natural Resources Conservation Service, wrote this section.

The original inhabitants of this survey area were the Paiute Indians. John C. Fremont was the first explorer of the area to make recorded observations. He led a party on an expedition to find the legendary Buenaventura River. This river was thought to flow from the Rocky Mountains to San Francisco Bay.

The Applegate Road and Noble Trail were early routes winding westward through the survey area. They were traveled by thousands of emigrants to northern California. The Applegate Road brushes the northeast corner of the survey area. Noble Trail crosses Black Rock and Smoke Creek Deserts. In 1854, John Dreibelbis surveyed and mapped both of these deserts for the Pacific Railroad.

Gerlach and Empire are the only communities in the survey area. Founded in 1906, Gerlach was named after the Gerlach Land and Livestock Company. At one time all of Gerlach was owned by the railroad, which was then the mainstay of the local economy. Local citizens later purchased the land and buildings from the railroad. Empire is about 5 miles south of Gerlach, near a gypsum mine.

The early economy of the survey area was based mainly on ranching and on some mining. Also, the railroad provided many jobs. The earliest large cattle ranches were the Miller Ranch, the Lux Ranch, and the

**CHART 1.—CLASSIFICATION OF BOLSON LANDFORMS**

Landforms			Parts of landforms

Gerlach Land and Livestock Company. They were established by the 1880's.

**Drainage**

Water from most of the tributaries in the survey area eventually ends up on bolson floors. The mainly intermittent flow of these streams derives from spring runoff and from convection storms in summer. In contrast, the streams on the eastern side of the Virginia Mountains flow into Pyramid Lake.

**Soil Landscapes**

The landforms in the survey area consist of numerous north-south oriented mountain ranges, valleys, and volcanic plateaus. Elevations range from 9,200 feet in the mountains to 3,800 feet in the valleys. The shapes, genetic relationships, and geographic scales of the topography observed in the field are used

to classify the landforms in the survey area (14). The two general classes—bolson and semibolson—are successively divided into smaller and genetically more homogeneous classes (charts 1 and 2). The broadest class is major physiographic parts, each of which is made up of several genetically related major landforms. These landforms in turn may consist of several genetically related component landforms. The component landforms are the smallest single units considered in combined terms of their form, constituent materials, and genetic history. Some component landforms, such as fan piedmont remnants, have distinctive topographic parts with quite different geomorphic histories. These parts are called landform elements. The landform elements that are erosional surfaces are subdivided into slope components. In the section "General Soil Map Units," landscape positions are given for each of the major components. These generally are major physiographic parts, major landforms, or component landforms. In the section

CHART 2.—CLASSIFICATION OF SEMIBOLSON LANDFORMS

I Major physiographic part	Landforms		Parts of landforms

“Detailed Soil Map Units,” broad landscape positions are specified for each map unit in the description of map unit setting. These are major physiographic parts or major landforms. Landscape positions also are given for each major component and contrasting inclusion in the map unit. These generally are component landforms, landform elements, or slope components.

**Geology**

The geology of the survey area is complex. The major rock types in the area are volcanic flow rocks, which are dominantly basalt and lesser amounts of

andesite and breccia. These rocks are generally Tertiary in age. Although they are throughout the survey area, they are dominantly in the Buffalo Hills, the Virginia Mountains, and the Fox and Lake Ranges. Examples of soils that formed in material weathered from these rocks are the Jaybee, Old Camp, and Oppio soils at the lower elevations; the Devada, Tunnison, Dosie, and Wylo soils at the middle elevations; and the Home Camp, Newlands, Ninemile, Hutchley, and Thulepah soils at the higher elevations.

In the northern and western parts of the survey area, tuff commonly underlies these flows. The tuff is commonly exposed on escarpments or in areas where

the basalt cap has been eroded away. Verdico, Chalco, and Corral are examples of soils that formed in material weathered from this rock.

The granitic rocks in the survey area are chiefly granodiorite and some quartz monzonite. They are Cretaceous in age and are correlative with the Sierra Nevada batholith. These rocks are dominant in the southern part of the Granite Range and are less abundant in the Virginia Mountains and the Fox Range. Examples of soils that formed in material weathered from these rocks are the Slocave and Kaffur soils at the lower elevations; the Graufels, Glenbrook, Berit, Deanran, and Noslo soils at the middle elevations; and the Hastee, Granipeak, Squawval, and Tosp soils at the higher elevations.

The metamorphic rocks in the survey area consist mainly of phyllite and schist. These rocks are Jurassic in age and are mainly in the Fox Range. Examples of soils that formed in material weathered from these rocks are Coppereid, Foxcan, Kreza, and Sojur soils.

The most extensive geologic unit in the survey area consists of Pleistocene and Holocene lacustrine sediments that make up the valley floors of the Smoke Creek Desert, the San Emidio Desert, Hualapai Flat, Winnemucca Lake, and Honey Lake Valley. These lake sediments consist mainly of clay and silt. They are in and adjacent to playas. Examples of soils that formed in these sediments are the Ragtown, Umberland, and Dedmount soils on lake plain terraces along playa margins. The lacustrine sediments are coarser textured along the higher lake plain terraces. Examples of soils that formed in these coarser textured sediments are Mazuma, Swingler, and Smaug on middle lake plain terraces. Trocken, Bluewing, and Veta are examples of soils that formed in the coarser textured lacustrine sediments of Holocene age on the higher lake plain terraces and alluvial fans.

## Climate

In Washoe County, summers are hot, especially at the lower elevations, and winters are cold. At the lower elevations, precipitation is normally light during all months of the year and the land is used mainly for range. At the higher elevations, precipitation is much greater and snow accumulates to a considerable depth. Some of the snowmelt irrigates crops in nearby valleys. Climatic data for Cedarville, California, and for Nixon, Sand Pass, and Reno, Nevada, reflect the climatic diversity of the survey area.

Table 1 gives data on temperature and precipitation for the survey area as recorded at Cedarville, California, and at Nixon, Reno, and Sand Pass, Nevada. Table 2 shows probable dates of the first freeze in fall and the

last freeze in spring. Table 3 provides data on the length of the growing season.

In winter, the average temperature is 33 degrees F and the average daily minimum temperature is 22 degrees F. In summer, the average temperature is 69 degrees F and the average daily maximum temperature is 87 degrees F.

Growing degree days are shown in table 1. They are equivalent to "heat units." Beginning in spring, growing degree days accumulate by the amount that the average temperature each day exceeds a base temperature (40 degrees F). The normal monthly accumulation is used to schedule single or successive plantings of a crop between the last freeze in spring and the first freeze in fall.

The total annual precipitation is about 6 inches at Nixon, Nevada; 7 inches at Sand Pass and Reno, Nevada; and 13 inches at Cedarville, California. About 33 percent of the total usually falls from April through September. The growing season for most crops falls within this period.

## How This Survey Was Made

This survey was made to provide information about the soils and miscellaneous areas in the survey area. The information includes a description of the soils and miscellaneous areas and their location and a discussion of their suitability, limitations, and management for specified uses. Soil scientists observed the steepness, length, and shape of slopes; the landforms; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They dug many holes to study the soil profile, which is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed. The unconsolidated material is devoid of roots and other living organisms. It has not been changed by other biological activity.

The soils and miscellaneous areas in the survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind or segment of the landscape. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landscape, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Individual soils on the landscape commonly merge into one another as their characteristics gradually

change. To construct an accurate map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. The system of taxonomic classification used in the United States is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior

of the soils under different uses. Interpretations for all the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

The descriptions, names, and delineations of the soils on the maps of this survey area do not fully agree with those on the maps of adjacent survey areas. Differences result from a better knowledge of soils, modifications in series concepts, and variations in the intensity of mapping or the extent of soils within the survey areas.

# General Soil Map Units

---

The general soil map at the back of this publication shows broad areas that have a distinctive pattern of soils, relief, and drainage. Each map unit on the general soil map is a unique natural landscape. Typically, it consists of one or more major soils or miscellaneous areas and some minor soils or miscellaneous areas. It is named for the major soils or miscellaneous areas. The soils or miscellaneous areas making up one unit can occur in another but in a different pattern.

The general soil map can be used to compare the suitability of large areas for general land uses. Areas of suitable soils or miscellaneous areas can be identified on the map. Likewise, areas that are not suitable can be identified.

Because of its small scale, the map is not suitable for planning the management of a farm or field or for selecting a site for a road, building, or other structure. The soils in any one map unit differ from place to place in slope, depth, drainage, and other characteristics that affect management.

In the descriptions of the general soil map units, a landscape position for each major component is specified. The landscape components are generally selected from the more general categories—major physiographic parts (such as mountains), major landforms (such as fan piedmonts), or component landforms (such as inset fans).

The 19 general map units in this survey area have been grouped into general kinds of landscapes for broad interpretive purposes.

## Areas Dominated by Soils and Playas on Bolson Floors, Inset Fans, and Alluvial Fans

This group consists of six map units. It makes up about 36 percent of the survey area.

### 1. Playas

This map unit consists of very deep, nearly level, very poorly drained soils on the lowest part of lake plains. Elevations are 3,800 to 4,000 feet. The average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 12 percent of the survey area.

Playas are typically stratified and moderately fine textured or fine textured throughout. They are strongly saline and sodic. They are ponded after winter and spring rains or after summer convection storms. The Playas are barren.

This map unit is used mainly for recreation.

### 2. Mazuma-Ragtown-Trocken

This map unit consists of very deep, nearly level to moderately sloping, moderately well drained or well drained soils on lake plain terraces. Elevations are 3,800 to 4,400 feet. The average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 12 percent of the survey area.

Mazuma and similar soils are very deep, nearly level or gently sloping, and well drained. They are on lake plain terraces. Typically, the surface layer is medium textured or moderately coarse textured. The substratum is stratified and moderately coarse textured. These soils support mainly shadscale, bud sagebrush, bottlebrush squirreltail, and black greasewood.

Ragtown and similar soils are very deep, nearly level, and moderately well drained. They are on the lower lake plain terraces. Typically, they have a moderately fine textured surface layer and a fine textured substratum. They support mainly black greasewood and shadscale.

Trocken and similar soils are very deep, gently sloping or moderately sloping, and well drained. They are on the upper lake plain terraces. Typically, they have a moderately coarse textured surface layer and a stratified, moderately coarse textured substratum. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

Of minor extent in this map unit are Smaug, Isolde, Umlerland, Veta, Voltaire, and Zorravista soils. Smaug soils are on the higher lake plain terraces. They support mainly winterfat. Isolde soils are on dunes

superimposed on lake plain terraces. They support mainly black greasewood and Indian ricegrass. Umberland soils are on the lowest lake plain terraces. They support mainly inland saltgrass, black greasewood, and iodinebush. Veta soils are on alluvial fans. They support mainly Wyoming big sagebrush, spiny hopsage, and bottlebrush squirreltail. Voltaire soils are on flood plains. They support mainly Nevada bluegrass and meadow barley. Zorravista soils are on dunes superimposed on lake plain terraces. They support mainly basin big sagebrush and Indian ricegrass.

This map unit is used mainly for rangeland and wildlife habitat.

### 3. Trocken-Bluewing

This map unit consists of very deep, moderately sloping or strongly sloping, well drained or excessively drained soils on lake plain terraces and inset fans. Elevations are 3,800 to 4,400 feet. The average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 3 percent of the survey area.

Trocken and similar soils are very deep, gently sloping or strongly sloping, and well drained. They are on the upper lake plain terraces. Typically, they have a moderately coarse textured surface layer and a stratified, moderately coarse textured substratum. They support mainly shadscale, Bailey greasewood, bud sagebrush, and bottlebrush squirreltail.

Bluewing and similar soils are very deep, gently sloping to strongly sloping, and excessively drained. They are on inset fans. Typically, they have a coarse textured surface layer and a stratified, coarse textured substratum. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

Of minor extent in this map unit are Ruhe, Ganaflan, and Mazuma soils on lake plain terraces and Labkey soils on barrier bars. Ruhe soils support mainly Nevada dalea, littleleaf horsebrush, and Indian ricegrass. Ganaflan soils support mainly shadscale, Bailey greasewood, bud sagebrush, and bottlebrush squirreltail. Mazuma soils support mainly shadscale and bud sagebrush. Labkey soils support mainly shadscale and bud sagebrush.

This map unit is used mainly for rangeland and wildlife habitat.

### 4. Typic Torriorthents-Trocken-Smaug

This map unit consists of very deep, nearly level to moderately sloping, well drained soils on lake plain terraces. Elevations are 3,800 to 4,400 feet. The

average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 4 percent of the survey area.

Typic Torriorthents and similar soils are very deep, nearly level or gently sloping, and well drained. They are on the lake plain terraces adjacent to Pyramid Lake. Typically, the surface layer is medium textured. The substratum is stratified and is coarse textured to moderately fine textured. These soils support mainly Russian thistle and inland saltgrass.

Trocken and similar soils are very deep, nearly level to moderately sloping, and well drained. They are on lake plain terraces. Typically, they have a moderately coarse textured surface layer and a stratified, moderately coarse textured substratum. They support mainly shadscale, winterfat, and bud sagebrush.

Smaug and similar soils are very deep, nearly level to moderately sloping, and well drained. They are on lake plain terraces. Typically, they have a medium textured surface layer and a medium textured substratum. They support mainly winterfat.

Of minor extent in this map unit are Swingler and Ganaflan soils on lake plain terraces, Hawsley soils on dunes and sand sheets, and Bluewing soils on fan skirts and inset fans. Swingler soils support mainly shadscale and black greasewood. Ganaflan soils support mainly shadscale and bud sagebrush. Hawsley soils support mainly littleleaf horsebrush, Nevada dalea, and Indian ricegrass. Bluewing soils support mainly shadscale and bud sagebrush.

This map unit is used mainly for rangeland and wildlife habitat.

### 5. Juva-Umberland-Mazuma

This map unit consists of very deep, nearly level and gently sloping, somewhat poorly drained or well drained soils on alluvial fans and lake plain terraces. Elevations are 3,900 to 4,200 feet. The average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 2 percent of the survey area.

Juva and similar soils are very deep, nearly level, and well drained. They are on alluvial fans. Typically, they have a moderately coarse textured surface layer and a stratified, moderately coarse textured substratum. They support mainly alfalfa in irrigated areas and Bailey greasewood, shadscale, and bud sagebrush in native areas.

Umberland and similar soils are very deep, nearly level, and somewhat poorly drained. They are on lake

plain terraces. Typically, they have a moderately fine textured surface layer and a fine textured substratum. They support mainly inland saltgrass, Torrey quailbush, black greasewood, and basin wildrye.

Mazuma and similar soils are very deep, nearly level to gently sloping, and well drained. They are on lake plain terraces. Typically, they have a medium textured surface layer and a stratified, moderately coarse textured substratum. They support mainly Bailey greasewood, shadscale, and bud sagebrush.

Of minor extent in this map unit are Benin, Slaw, and Jerval soils. Benin soils are on lake plain terraces. They support mainly Torrey quailbush, black greasewood, and basin wildrye. Slaw soils are on alluvial flats. They support mainly Torrey quailbush, black greasewood, and basin wildrye. Jerval soils are on the higher lake plain terraces. They support mainly Bailey greasewood, shadscale, and bud sagebrush.

This map unit is used mainly for rangeland, wildlife habitat, and cropland.

#### **6. Gitakup-Chuckles-Ragtown**

This map unit consists of very deep, nearly level, moderately well drained soils on lake plain terraces. Elevations are 3,900 to 4,000 feet. The average annual precipitation is 5 to 7 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 3 percent of the survey area.

Gitakup and similar soils are very deep, nearly level, and moderately well drained. They are on lake plain terraces. Typically, they have a moderately fine textured surface layer, a fine textured subsoil, and a moderately fine textured substratum. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

Chuckles and similar soils are very deep, nearly level, and moderately well drained. They are on lake plain terraces. Typically, they have a medium textured surface layer and a medium textured substratum. They support mainly shadscale, black greasewood, and bud sagebrush.

Ragtown and similar soils are very deep, nearly level, and moderately well drained. They are on the lower lake plain terraces. Typically, they have a moderately fine textured surface layer and a fine textured substratum. They support mainly black greasewood.

Of minor extent in this map unit are Playas and Umberland, Dun Glen, and Zorravista soils. Playas are on the lowest part of lake plains. They are barren. Umberland soils are on the lower lake plain terraces. They support mainly inland saltgrass. Dun Glen soils are on the higher lake plain terraces. They support mainly shadscale, bud sagebrush, and bottlebrush

squirreltail. Zorravista soils are on dunes superimposed on lake plain terraces and alluvial fans. They support mainly basin big sagebrush and Indian ricegrass.

This map unit is used mainly for rangeland and wildlife habitat. Scattered small areas are used for urban development.

#### **Areas Dominated by Soils on Fan Piedmonts, Alluvial Fans, and Lake Plains**

This group consists of four map units. It makes up about 7 percent of the survey area.

#### **7. Jerval-Dorper**

This map unit consists of very deep, gently sloping to strongly sloping, well drained soils on fan piedmonts. Elevations are 4,400 to 4,900 feet. The average annual precipitation is 6 to 8 inches. The average annual air temperature is 50 to 52 degrees F. The frost-free period is 120 to 130 days.

This map unit makes up about 1 percent of the survey area.

Jerval and similar soils are very deep, gently sloping to strongly sloping, and well drained. They are on fan piedmont remnants. Typically, they have a medium textured surface layer, a moderately fine textured subsoil, and a moderately coarse textured substratum. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

Dorper and similar soils are very deep, gently sloping or moderately sloping, and well drained. They are on fan piedmont remnants. Typically, they have a medium textured surface layer, a fine textured subsoil, and a moderately coarse textured substratum. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

Of minor extent in this map unit are Kumiva, Toulon, and Shawave soils. Kumiva soils are on inset fans. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail. Toulon soils are on beach bars at the lower elevations. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail. Shawave soils are on the higher fan piedmont remnants. They support mainly Wyoming big sagebrush, Sandberg bluegrass, and bottlebrush squirreltail.

This map unit is used mainly for rangeland and wildlife habitat.

#### **8. Buffaran-Fulstone-Phing**

This map unit consists of shallow and very deep, gently sloping to strongly sloping, well drained soils on fan piedmonts. Elevations are 4,300 to 5,400 feet. The average annual precipitation is 8 to 10 inches. The average annual air temperature is 48 to 50 degrees F. The frost-free period is 100 to 110 days.

This map unit makes up about 2 percent of the survey area.

Buffaran and similar soils are shallow, gently sloping to strongly sloping, and well drained. They are on fan piedmont remnants. Typically, they have a stony, medium textured surface layer; a fine textured subsoil; and a strongly cemented duripan. They support mainly Wyoming big sagebrush, bottlebrush squirreltail, and Sandberg bluegrass.

Fulstone and similar soils are shallow, gently sloping or moderately sloping, and well drained. They are on fan piedmont remnants. Typically, they have a very stony, medium textured surface layer; a fine textured subsoil; and an indurated duripan. They support mainly Lahontan sagebrush, bottlebrush squirreltail, and Sandberg bluegrass.

Phing and similar soils are very deep, gently sloping or moderately sloping, and well drained. They are on fan piedmont remnants. Typically, they have a stony, moderately coarse textured surface layer; a fine textured subsoil; and a stratified, moderately coarse textured and coarse textured substratum.

Of minor extent in this map unit are Corral, Jaybee, and Cleaver soils. Corral soils are on the side slopes of old lake terraces or pediment remnants. They support mainly Wyoming big sagebrush, Sandberg bluegrass, and bottlebrush squirreltail. Jaybee soils are on hill and plateau remnants. They support mainly Lahontan sagebrush, Sandberg bluegrass, and bottlebrush squirreltail. Cleaver soils are on the lower fan piedmont remnants. They support mainly shadscale, bud sagebrush, and bottlebrush squirreltail.

This map unit is used mainly for rangeland and wildlife habitat.

### **9. Veta-Haybourne**

This map unit consists of very deep, gently sloping and moderately sloping, well drained soils on alluvial fans and lake plains. Elevations are 4,000 to 4,400 feet. The average annual precipitation is 8 to 10 inches. The average annual air temperature is 49 to 51 degrees F. The frost-free period is 100 to 110 days.

This map unit makes up about 3 percent of the survey area.

Veta and similar soils are very deep, gently sloping or moderately sloping, and well drained. They are on alluvial fans and lake plain terraces. Typically, they have a moderately coarse textured surface layer and subsoil and a stratified, moderately coarse textured substratum. They support mainly Wyoming big sagebrush, bottlebrush squirreltail, and Sandberg bluegrass.

Haybourne and similar soils are very deep, gently sloping or moderately sloping, and well drained. They

are on alluvial fans and lake plain terraces. Typically, they have a moderately coarse textured surface layer, subsoil, and substratum. They support mainly Wyoming big sagebrush, bottlebrush squirreltail, and Sandberg bluegrass.

Of minor extent in this map unit are Langston, Trocken, Zorravista, Fulstone, and Kayo soils. Langston soils are on alluvial fan remnants and high lake terraces. They support mainly Wyoming big sagebrush, bottlebrush squirreltail, and Sandberg bluegrass. Trocken soils are on the lower alluvial fans and lake terraces. They support mainly shadscale and bud sagebrush. Zorravista soils are on dunes. They support mainly basin big sagebrush and Indian ricegrass. Fulstone soils are on alluvial fan remnants and fan piedmont remnants. They support mainly Lahontan sagebrush and Sandberg bluegrass. Kayo soils are on alluvial fans. They support mainly Wyoming big sagebrush and bottlebrush squirreltail.

This map unit is used mainly for rangeland and wildlife habitat.

### **10. Leviathan-Haybourne-Springmeyer**

This map unit consists of very deep, nearly level to strongly sloping, well drained soils on alluvial fans and fan piedmonts. Elevations are 4,200 to 5,600 feet. The average annual precipitation is 9 to 11 inches. The average annual air temperature is 47 to 50 degrees F. The frost-free period is 90 to 110 days.

This map unit makes up about 1 percent of the survey area.

Leviathan and similar soils are very deep, moderately sloping or strongly sloping, and well drained. They are on fan piedmont remnants. Typically, they have a very stony, moderately coarse textured surface layer and a moderately fine textured subsoil. They support mainly mountain big sagebrush and bluebunch wheatgrass.

Haybourne and similar soils are very deep, nearly level to moderately sloping, and well drained. They are on the lower fan piedmont remnants. Typically, they have a coarse textured surface layer and a moderately coarse textured subsoil and substratum. They support mainly Wyoming big sagebrush and bottlebrush squirreltail.

Springmeyer and similar soils are very deep, gently sloping or moderately sloping, and well drained. They are on the higher inset fans. Typically, they have a very stony, moderately coarse textured surface layer and a moderately fine textured subsoil and substratum. They support mainly mountain big sagebrush and bluebunch wheatgrass.

Of minor extent in this map unit are Mottsville, Incy, and Barnard soils. Mottsville soils are on fan collars and fan aprons. They support mainly mountain big

sagebrush, antelope bitterbrush, needleandthread, and Indian ricegrass. Incy soils are on dunes. They support mainly Anderson peachbrush, antelope bitterbrush, and needleandthread. Barnard soils are on fan piedmont remnants. They support mainly mountain big sagebrush and bluebunch wheatgrass.

This map unit is used mainly for rangeland and wildlife habitat.

### **Areas Dominated by Soils and Rock Outcrop on Hills and Low Plateaus**

This group consists of three map units. It makes up about 19 percent of the survey area.

#### **11. Slocave-Kaffur-Rock Outcrop**

This map unit consists of very shallow, steep and very steep, well drained soils on hills. Elevations are 4,300 to 5,800 feet. The average annual precipitation is 6 to 10 inches. The average annual air temperature is 48 to 51 degrees F. The frost-free period is 90 to 110 days.

This map unit makes up about 1 percent of the survey area.

Slocave and similar soils are very shallow, steep or very steep, and well drained. They are on the side slopes of hills. Typically, they are moderately coarse textured throughout and are underlain by granitic bedrock. They support mainly shadscale, desert needlegrass, and littleleaf horsebrush.

Kaffur and similar soils are very shallow, steep or very steep, and well drained. They are on the side slopes of hills. Typically, they are moderately coarse textured throughout and are underlain by granitic bedrock. They support mainly Lahontan sagebrush, bluegrass, and Utah juniper.

Rock outcrop is in scattered areas throughout the map unit. It is barren.

Of minor extent in this map unit are Arclay and Jaybee soils. Arclay soils are on the steep, north-facing side slopes of hills. They support mainly Lahontan sagebrush and Thurber needlegrass. Jaybee soils are on hills of volcanic rock. They support mainly Lahontan sagebrush and bluegrass.

This map unit is used mainly for rangeland and wildlife habitat.

#### **12. Coppereid-Foxcan-Sojur**

This map unit consists of very shallow, strongly sloping to very steep, well drained soils on hills. Elevations are 4,400 to 6,000 feet. The average annual precipitation is 8 to 10 inches. The average annual air temperature is 48 to 51 degrees F. The frost-free period is 90 to 110 days.

This map unit makes up about 3 percent of the survey area.

Coppereid and similar soils are very shallow, strongly sloping to steep, and well drained. They are on the side slopes of hills. Typically, they are moderately coarse textured throughout and are underlain by shale bedrock. They support mainly Lahontan sagebrush, Sandberg bluegrass, and bottlebrush squirreltail.

Foxcan and similar soils are very shallow, very steep, and well drained. They are on the back slopes of hills. Typically, they are medium textured throughout and are underlain by shale bedrock. They support mainly Wyoming big sagebrush, Utah juniper, and Thurber needlegrass.

Sojur and similar soils are very shallow, very steep, and well drained. They are on the back slopes of hills. Typically, they are medium textured throughout and are underlain by phyllite bedrock. They support mainly shadscale.

Of minor extent in this map unit are Kreza and Phliss soils on the crests and shoulders of hills and Rock outcrop in scattered areas throughout the unit. Kreza soils support mainly Lahontan sagebrush and Sandberg bluegrass. Phliss soils support mainly Wyoming big sagebrush and Sandberg bluegrass. Rock outcrop is barren.

This map unit is used mainly for rangeland and wildlife habitat.

#### **13. Jaybee-Old Camp-Pickup**

This map unit consists of very shallow to moderately deep, moderately sloping to steep, well drained soils on hills and low plateaus. Elevations are 4,300 to 6,000 feet. The average annual precipitation is 8 to 12 inches. The average annual air temperature is 47 to 50 degrees F. The frost-free period is 80 to 100 days.

This map unit makes up about 15 percent of the survey area.

Jaybee and similar soils are very shallow or shallow, moderately sloping to moderately steep, and well drained. They are on the crests and shoulders of hills and on the summits and shoulders of low plateaus. Typically, they have a very cobbly, moderately coarse textured surface layer and a moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly Lahontan sagebrush, Sandberg bluegrass, and Thurber needlegrass.

Old Camp and similar soils are shallow, moderately steep or steep, and well drained. They are on the side slopes of hills and low plateaus. Typically, they have a very stony, medium textured surface layer and a moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly Wyoming big

sagebrush, Sandberg bluegrass, and Thurber needlegrass.

Pickup and similar soils are moderately deep, moderately steep or steep, and well drained. They are on the north-facing side slopes of hills and low plateaus. Typically, they have a very stony, medium textured surface layer and a fine textured subsoil and are underlain by volcanic bedrock. They support mainly Lahontan sagebrush and bluebunch wheatgrass.

Of minor extent in this map unit are Reywat soils, Rock outcrop, and Theon soils. Reywat soils are on the upper, north-facing side slopes of hills and plateaus. They support mainly mountain big sagebrush and bluebunch wheatgrass. Rock outcrop is in scattered areas throughout the unit. It is barren. Theon soils are on the lower side slopes of hills and plateaus. They support mainly shadscale.

This map unit is used mainly for rangeland and wildlife habitat.

#### **Areas Dominated by Soils and Rock Outcrop on Mountains and Plateaus**

This group consists of six map units. It makes up about 38 percent of the survey area.

#### **14. Devada-Tunnison-Softscrabble**

This map unit consists of shallow to very deep, nearly level to steep, well drained soils on mountains and plateaus. Elevations are 5,000 to 6,200 feet. The average annual precipitation is 10 to 14 inches. The average annual air temperature is 45 to 50 degrees F. The frost-free period is 65 to 90 days.

This map unit makes up about 20 percent of the survey area.

Devada and similar soils are shallow, nearly level to moderately steep, and well drained. They are on the summits and shoulders of plateaus and on the crests and shoulders of mountains. Typically, they have a very stony, medium textured surface layer and a fine textured subsoil and are underlain by volcanic bedrock. They support mainly low sagebrush, Thurber needlegrass, and bluebunch wheatgrass.

Tunnison and similar soils are moderately deep, nearly level to moderately steep, and well drained. They are on the summits and shoulders of plateaus. Typically, they have a very cobbly, fine textured surface layer and fine textured underlying material. They are underlain by volcanic bedrock. They support mainly low sagebrush, Sandberg bluegrass, and Hooker balsamroot.

Softscrabble and similar soils are very deep, strongly sloping to steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a stony, medium textured surface layer and a medium

textured or moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, and Thurber needlegrass.

Of minor extent in this map unit are Pickup, Reywat, Chalco, Boulder Lake, and Hart Camp soils. Pickup and Reywat soils are on the lower side slopes of mountains and plateaus. Pickup soils support mainly Lahontan sagebrush and bluebunch wheatgrass. Reywat soils support mainly mountain big sagebrush and bluebunch wheatgrass. Chalco soils are on the lower side slopes of plateaus and pediment remnants. They support mainly low sagebrush, Thurber needlegrass, and Sandberg bluegrass. Boulder Lake soils are in interplateau basins. They support mainly silver sagebrush, Nevada bluegrass, and Baltic rush. Hart Camp soils are on the shoulders of plateaus. They support mainly mountain big sagebrush, antelope bitterbrush, and bluebunch wheatgrass.

This map unit is used mainly for rangeland and wildlife habitat.

#### **15. Reywat-Wylo-Old Camp**

This map unit consists of shallow, moderately sloping to very steep, well drained soils on mountains and plateaus. Elevations are 4,300 to 8,000 feet. The average annual precipitation is 8 to 12 inches. The average annual air temperature is 47 to 50 degrees F. The frost-free period is 75 to 100 days.

This map unit makes up about 10 percent of the survey area.

Reywat and similar soils are shallow, moderately steep to very steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a very stony, medium textured surface layer and a medium textured or moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, and Thurber needlegrass.

Wylo and similar soils are shallow, moderately sloping to steep, and well drained. They are on the crests and side slopes of mountains and on the summits and side slopes of plateaus. Typically, they have a very stony, medium textured surface layer and a fine textured subsoil and are underlain by volcanic bedrock. They support mainly Lahontan sagebrush, bluebunch wheatgrass, and Thurber needlegrass.

Old Camp and similar soils are shallow, moderately steep or steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a very stony, medium textured surface layer and a medium textured or moderately fine textured subsoil and are underlain by volcanic bedrock. They support

mainly Wyoming big sagebrush, Thurber needlegrass, and Sandberg bluegrass.

Of minor extent in this map unit are Rock outcrop and Jaybee, Manogue, Glenbrook, and Theon soils. Rock outcrop is in scattered areas throughout the map unit. It is barren. Jaybee soils are on the lower plateaus and hills. They support mainly Lahontan sagebrush, Sandberg bluegrass, and Thurber needlegrass. Manogue soils are on the summits of plateaus and the crests of mountains. They support mainly Lahontan sagebrush and bottlebrush squirreltail. Glenbrook soils are on the side slopes of mountains. They support mainly Wyoming big sagebrush and desert needlegrass. Theon soils are on the lowest side slopes and crests of hills. They support mainly shadscale and bottlebrush squirreltail.

This map unit is used mainly for rangeland and wildlife habitat.

#### **16. Softscrabble-Terca-Hutchley**

This map unit consists of shallow or very deep, moderately sloping to very steep, well drained soils on mountains and plateaus. Elevations are 5,500 to 8,000 feet. The average annual precipitation is 10 to 16 inches. The average annual air temperature is 42 to 47 degrees F. The frost-free period is 65 to 90 days.

This map unit makes up 3 percent of the survey area.

Softscrabble and similar soils are very deep, moderately steep or steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a very stony, medium textured surface layer and a moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, and basin wildrye.

Terca and similar soils are shallow, moderately steep to very steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a very stony, medium textured surface layer and a moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, antelope bitterbrush, and basin wildrye.

Hutchley and similar soils are shallow, moderately sloping to moderately steep, and well drained. They are on the crests and shoulders of mountains. Typically, they have a very cobbly, moderately coarse textured surface layer and a medium textured or moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly low sagebrush and Sandberg bluegrass.

Of minor extent in this map unit are Thulepah soils, Rock outcrop, and Indiano soils. Thulepah soils are on

the higher side slopes of mountains and plateaus. They support mainly mountain big sagebrush, snowberry, and mountain brome. Rock outcrop is in scattered areas throughout the map unit. It is barren. Indiano soils are on the lower side slopes of mountains and plateaus. They support mainly mountain big sagebrush, bluebunch wheatgrass, and Thurber needlegrass.

This map unit is used mainly for rangeland and wildlife habitat.

#### **17. Graufels-Glenbrook-Rock Outcrop**

This map unit consists of shallow or moderately deep, moderately steep to very steep, somewhat excessively drained soils on mountains. Elevations are 5,000 to 6,200 feet. The average annual precipitation is 10 to 14 inches. The average annual air temperature is 46 to 48 degrees F. The frost-free period is 75 to 100 days.

This map unit makes up about 1 percent of the survey area.

Graufels and similar soils are moderately deep, moderately steep or steep, and somewhat excessively drained. They are on the side slopes of mountains. Typically, they have a bouldery, coarse textured surface layer and coarse textured underlying material. They are underlain by granitic bedrock. They support mainly mountain big sagebrush, antelope bitterbrush, and needlegrass.

Glenbrook and similar soils are shallow, moderately steep to very steep, and somewhat excessively drained. They are on the side slopes of mountains. Typically, they are coarse textured throughout and are underlain by granitic bedrock. They support mainly mountain big sagebrush, green ephedra, antelope bitterbrush, and desert needlegrass.

Rock outcrop is in scattered areas throughout the map unit. It is barren.

Of minor extent in this map unit are Sumine soils on the side slopes of mountains. These soils are underlain by volcanic bedrock. They support mainly mountain big sagebrush and bluebunch wheatgrass.

This map unit is used mainly for rangeland and wildlife habitat.

#### **18. Berit-Hastee-Rock Outcrop**

This map unit consists of very shallow or deep, moderately steep to very steep, well drained or somewhat excessively drained soils on mountains. Elevations are 4,800 to 9,000 feet. The average annual precipitation is 12 to more than 16 inches. The average annual air temperature is 40 to 47 degrees F. The frost-free period is 60 to 80 days.

This map unit makes up about 2 percent of the survey area.

Berit and similar soils are very shallow, moderately steep to very steep, and somewhat excessively drained. They are on the side slopes of mountains. Typically, they have an extremely bouldery, moderately coarse textured surface layer and a moderately fine textured subsoil and are underlain by granitic bedrock. They support mainly Utah juniper, mountain big sagebrush, and bluebunch wheatgrass.

Hastee and similar soils are deep, very steep, and well drained. They are on the side slopes of mountains. Typically, they have an extremely bouldery, moderately coarse textured surface layer and coarse textured underlying material. They are underlain by granitic bedrock. They support mainly mountain big sagebrush, snowberry, mountain brome, and Columbia needlegrass.

Rock outcrop is in scattered areas throughout the map unit. It is barren.

Of minor extent in this map unit are Granipeak, Noslo, and Arclay soils. Granipeak soils are on the side slopes of mountains. They support mainly mountain big sagebrush, snowberry, and bluebunch wheatgrass. Noslo and Arclay soils are on the lower side slopes of mountains. Noslo soils support mainly Lahontan sagebrush and bluebunch wheatgrass. Arclay soils support mainly Lahontan sagebrush and Sandberg bluegrass.

This map unit is used mainly for rangeland and wildlife habitat.

### **19. Home Camp-Newlands-Ninemile**

This map unit consists of shallow to deep, moderately sloping to moderately steep, well drained soils on mountains and plateaus. Elevations are 6,000 to 7,600 feet. The average annual precipitation is 14 to 16 inches. The average annual air temperature is 42 to 46 degrees F. The frost-free period is 60 to 75 days.

This map unit makes up about 2 percent of the survey area.

Home Camp and similar soils are moderately deep, moderately sloping to moderately steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a stony, medium textured surface layer and a fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, and Idaho fescue.

Newlands and similar soils are deep, moderately sloping to moderately steep, and well drained. They are on the side slopes of mountains and plateaus. Typically, they have a stony, medium textured surface layer and a moderately fine textured subsoil and are underlain by volcanic bedrock. They support mainly mountain big sagebrush, bluebunch wheatgrass, and Idaho fescue.

Ninemile and similar soils are shallow, moderately sloping or strongly sloping, and well drained. They are on the crests of mountains and the summits of plateaus. Typically, they have a very stony, medium textured surface layer and a fine textured subsoil and are underlain by volcanic bedrock. They support mainly low sagebrush, bluebunch wheatgrass, and Idaho fescue.

Of minor extent in this map unit are Hart Camp, Devada, Softscrabble, and Pickup soils. Hart Camp soils are on the shoulders of plateaus. They support mainly antelope bitterbrush, mountain big sagebrush, and bluebunch wheatgrass. Devada soils are on the crests of the lower mountains and the summits of plateaus. They support mainly low sagebrush, bluebunch wheatgrass, and Thurber needlegrass. Softscrabble soils are on the lower side slopes of mountains and plateaus. They support mainly mountain big sagebrush, bluebunch wheatgrass, and basin wildrye. Pickup soils are on the lower side slopes of mountains and plateaus. They support mainly Lahontan sagebrush and bluebunch wheatgrass.

This map unit is used mainly for rangeland and wildlife habitat.

## Detailed Soil Map Units

---

The map units on the detailed maps at the back of this soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions in this section, along with the maps, can be used to determine the suitability and potential of a unit for specific uses. The soil properties and characteristics described can be used to plan the management needed for those uses. More information about each map unit, or soil, is given under the headings "Use and Management of the Soils" and "Soil Properties."

A map unit delineation on a map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils or miscellaneous areas. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils and miscellaneous areas are natural phenomena and have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some included areas that belong to other taxonomic classes.

The presence of included areas in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into segments that have similar use and management requirements. The delineation of such landscape segments on the map provides sufficient information for the development of resource plans, but if intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soils that have profiles that are almost alike make up a *soil series*. The soils of a series have major horizons that are similar in composition, thickness, and arrangement. Soils of one series can differ in texture of the upper layer or of the underlying layers. They also can differ in slope, stoniness, salinity, wetness, degree of erosion, and other characteristics that affect their

use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Fulstone very stony loam, 4 to 15 percent slopes, is a phase of the Fulstone series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are called complexes or associations.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Ragtown-Isolde complex, 0 to 15 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Devada-Tunnison association is an example.

This survey includes *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Playas is an example. Some areas that are too small to be delineated are identified by special symbols on the soil maps.

Table 4 gives the acreage and proportionate extent of each map unit. Other tables (see "Summary of Tables") give properties of the soils and the limitations, capabilities, and potentials for many uses.

The Glossary defines many of the terms used in describing the soils or miscellaneous areas. The following paragraphs explain some of the headings used in the map unit descriptions.

Map unit setting is given for the entire map unit. The landscape positions indicated under the heading "Map unit setting" generally are broader than those given for each major component of the map unit.

Composition is given for the major components of the

map unit and for the contrasting inclusions. Contrasting inclusions are soils or miscellaneous areas that differ from the soils or miscellaneous areas for which the unit is named. Inclusions can either be similar or contrasting. Similar inclusions are components that differ from the components for which the unit is named in ways that do not significantly affect use and management. In the "Composition" section, a single percentage is provided for a named soil and the similar inclusions because their use and management are similar. Contrasting inclusions differ from the components for which the unit is named more significantly than the similar inclusions. The differences would result in different use and management requirements if the contrasting inclusions were extensive enough to be managed separately. For most uses, contrasting inclusions have a limited effect on use and management.

Inclusions generally are in small areas and could not be mapped separately because of the scale used in mapping. Some small areas of strongly contrasting inclusions are identified by a special symbol on the detailed soil maps. A few inclusions may not have been observed and consequently are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the inclusions on the landscape.

A description of the characteristics of the major components in the map unit follows the description of composition. These characteristics include classification, position on the landscape, parent material, slope range, elevation, and dominant present vegetation. Also included are climatic data, a typical profile, and important soil and water features.

Information about the contrasting inclusions follows the description of the characteristics of the major components. This information includes classification, position on the landscape, and distinctive present vegetation.

Interpretive groups are specified at the end of the map unit descriptions. The capability classification and range site for each major component and the range site for each contrasting inclusion are identified.

## 120—Home Camp-Newlands association

### *Map Unit Setting*

*Position on landscape:* Plateaus

### *Composition*

*Major components:*

- Home Camp stony loam, 4 to 30 percent slopes—60 percent

- Newlands stony loam, 4 to 30 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids very gravelly clay loam, 4 to 15 percent slopes—5 percent
- Inclusion 2: Ninemile extremely cobbly loam, 0 to 8 percent slopes—5 percent
- Inclusion 3: Rock outcrop—4 percent
- Inclusion 4: Cumulic Cryaquolls loam, 8 to 15 percent slopes—1 percent

### *Characteristics of the Home Camp Soil*

*Classification:* Argic Cryoborolls, clayey-skeletal, montmorillonitic

*Position on landscape:* Side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 4 to 30 percent

*Elevation:* 6,000 to 7,600 feet

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

### *Climatic Data*

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free period:* About 60 days

### *Typical Profile*

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 17 inches

*Texture:* Very gravelly sandy clay loam, very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 to 26 inches

*Texture:* Very gravelly clay

*Structure:* Subangular blocky

*Consistence:* Slightly hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 26 inches

*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.0 to 6.0 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Characteristics of the Newlands Soil**

*Classification:* Argic Cryoborolls, fine-loamy, mixed

*Position on landscape:* Side slopes of plateaus

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 4 to 30 percent

*Elevation:* 6,000 to 7,600 feet

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free period:* About 60 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 10 percent

*Depth:* 0 to 8 inches

*Texture:* Stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 41 inches

*Texture:* Clay loam, gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 41 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 6.4 to 9.6 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, frigid

*Position on landscape:* Summits of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

##### **Inclusion 2**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, frigid

*Position on landscape:* Summits of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

##### **Inclusion 3**

*Position on landscape:* Summits and rims of plateaus

*Distinctive present vegetation:* None

##### **Inclusion 4**

*Classification:* Cumulic Cryaquolls

*Position on landscape:* Side slopes of plateaus adjacent to seeps and springs

*Distinctive present vegetation:* Sedge, rush

#### **Interpretive Groups**

*Capability classification:* Home Camp and Newlands soils—VIIIs, nonirrigated

*Range site:* Home Camp and Newlands soils—023XY007NV; Inclusion 1—023XY008NV; Inclusion 2—023XY017NV; Inclusion 3—none; Inclusion 4—023XY013NV

## 131—Devada-Hart Camp-Tunnison association

### Map Unit Setting

*Position on landscape:* Plateaus

### Composition

*Major components:*

- Devada extremely stony loam, 0 to 8 percent slopes—35 percent
- Hart Camp very stony loam, 4 to 15 percent slopes—25 percent
- Tunnison very cobbly clay, 0 to 8 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Tunnison cobbly clay, 0 to 8 percent slopes—7 percent
- Inclusion 2: Softscrabble stony loam, 15 to 50 percent slopes—6 percent
- Inclusion 3: Rock outcrop—2 percent

### Characteristics of the Devada Soil

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly convex or smooth summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,600 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches

*Texture:* Extremely stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 12 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Characteristics of the Hart Camp Soil

*Classification:* Aridic Argixerolls, loamy, mixed, frigid, shallow

*Position on landscape:* Undulating shoulders of plateaus

*Parent material:* Residuum derived from tuff

*Slope range:* 4 to 15 percent

*Elevation:* 5,600 to 6,200 feet

*Dominant present vegetation:* Mountain big sagebrush, antelope bitterbrush, bluebunch wheatgrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 70 days

### Typical Profile

*Surface cover:* Stones and boulders, 10 percent; cobbles, 5 percent; pebbles, 5 percent

*Depth:* 0 to 3 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 13 inches

*Texture:* Gravelly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.7 to 3.4 inches

*Water-supplying capacity:* 11 to 13 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Tunnison Soil**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Smooth or slightly concave summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,600 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 3 percent; cobbles, 40 percent; pebbles, 15 percent

*Depth:* 0 to 1 inch

*Texture:* Very cobbly clay

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 31 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 31 to 38 inches

*Texture:* Weathered bedrock

*Depth:* 38 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.3 to 5.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Summits of plateaus

*Distinctive present vegetation:* Rubber rabbitbrush, bottlebrush squirreltail, Hooker balsamroot

#### **Inclusion 2**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing side slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 3**

*Position on landscape:* Summits and rims of plateaus

*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Devada, Hart Camp, and Tunnison soils—VIIIs, nonirrigated

*Range site:* Devada soil—023XY031NV; Hart Camp soil—023XY015NV; Tunnison soil—023XY044NV; Inclusion 1—023XY001NV; Inclusion 2—023XY007NV; Inclusion 3—none

## **133—Devada-Tunnison-Softscrabble association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### Composition

#### Major components:

- Devada extremely stony loam, 2 to 15 percent slopes—45 percent
- Tunnison very cobbly clay, 2 to 8 percent slopes—25 percent
- Softscrabble stony loam, 15 to 30 percent slopes—15 percent

#### Contrasting inclusions:

- Inclusion 1: Lithic Xerollic Haplargids very gravelly loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Lithic Xerollic Camborthids very stony clay, 2 to 8 percent slopes—5 percent
- Inclusion 3: Hart Camp stony loam, 4 to 15 percent slopes—3 percent
- Inclusion 4: Rock outcrop—2 percent

### Characteristics of the Devada Soil

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly convex summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 2 to 15 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Characteristics of the Tunnison Soil

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits and side slopes of plateaus

*Parent material:* Residuum derived from basalt

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 31 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 31 to 38 inches

*Texture:* Weathered bedrock

*Depth:* 38 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.3 to 5.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Shoulders of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

**Inclusion 2**

*Position on landscape:* Summits and rims of plateaus

*Distinctive present vegetation:* None

**Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* The lower, convex summits of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Hooker balsamroot

**Inclusion 4**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Distinctive present vegetation:* Rubber rabbitbrush, bottlebrush squirreltail, Hooker balsamroot

**Interpretive Groups**

*Capability classification:* Devada and Tunnison soils—VIIs, nonirrigated

*Range site:* Devada soil—023XY031NV; Tunnison soil—023XY044NV; Inclusion 1—023XY031NV; Inclusion 2—none; Inclusion 3—023XY021NV; Inclusion 4—023XY001NV

**137—Devada-Tunnison-Rock outcrop association**

**Map Unit Setting**

*Position on landscape:* Plateaus

**Composition**

*Major components:*

- Devada extremely stony loam, 4 to 15 percent slopes—40 percent
- Tunnison extremely stony clay, 4 to 15 percent slopes—35 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids very cobbly loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Devada extremely stony loam, 15 to 30 percent slopes—3 percent
- Inclusion 3: Tunnison cobbly clay, 4 to 15 percent slopes—2 percent

**Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly convex summits of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Characteristics of the Tunnison Soil**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 40 percent; cobbles, 30 percent; pebbles, 15 percent

*Depth:* 0 to 1 inch

*Texture:* Extremely stony clay

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 31 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Depth:* 13 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing back slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 5,100 to 5,400 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.0 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Convex summits of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Hooker balsamroot

#### **Inclusion 3**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* South- and west-facing side slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 4**

*Classification:* Aridic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Intermittent stream terraces

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Interpretive Groups**

*Capability classification:* Devada, Reywat, and Tunnison soils—VIIIs, nonirrigated

*Range site:* Devada soil—023XY031NV; Reywat soil—023XY039NV; Tunnison soil—023XY044NV; Inclusion 1—none; Inclusion 2—023XY021NV; Inclusion 3—023XY039NV; Inclusion 4—023XY009NV

## **150—Skedaddle-Old Camp-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Plateaus, hills, and mountains

### **Composition**

#### *Major components:*

- Skedaddle very stony loam, 30 to 50 percent slopes—45 percent
- Old Camp extremely stony loam, 30 to 50 percent slopes—25 percent
- Rock outcrop—15 percent

#### *Contrasting inclusions:*

- Inclusion 1: Pickup very stony loam, 30 to 50 percent slopes—5 percent
- Inclusion 2: Jaybee very cobbly sandy loam, 4 to 30 percent slopes—5 percent
- Inclusion 3: Xerollic Haplargids very stony sandy loam, 8 to 30 percent slopes—4 percent
- Inclusion 4: Fluventic Haploxerolls stony loam, 2 to 15 percent slopes—1 percent

### **Characteristics of the Skedaddle Soil**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Convex back slopes of plateaus, hills, and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 6,000 feet

*Dominant present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 20 percent; pebbles, 25 percent

*Depth:* 0 to 5 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

### Characteristics of the Rock Outcrop

*Position on landscape:* Summits and side slopes of plateaus, hills, and mountains  
*Kind of rock:* Basalt

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* North-facing side slopes of hills and mountains  
*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### Inclusion 2

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* Summits and shoulders of small plateau remnants  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 3

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Toe slopes of hills  
*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Inclusion 4

*Classification:* Fluventic Haploxerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Inset fan remnants  
*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Interpretive Groups

*Capability classification:* Skedaddle and Old Camp soils—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Skedaddle soil—023XY030NV; Old Camp soil—026XY022NV; Rock outcrop—none; Inclusion 1—023XY037NV; Inclusion 2—023XY047NV; Inclusion 3—023XY006NV; Inclusion 4—023XY006NV

## 151—Skedaddle-Jaybee-Rock outcrop association

### Map Unit Setting

*Position on landscape:* Hills, mountains, and plateaus

### Composition

*Major components:*

- Skedaddle very stony loam, 15 to 50 percent slopes—45 percent
  - Jaybee very cobbly sandy loam, 4 to 30 percent slopes—30 percent
  - Rock outcrop—10 percent
- Contrasting inclusions:*
- Inclusion 1: Pickup very stony loam, 30 to 50 percent slopes—7 percent
  - Inclusion 2: Old Camp very stony loam, 30 to 50 percent slopes—4 percent
  - Inclusion 3: Manogue very cobbly clay, 2 to 8 percent slopes—4 percent

### Characteristics of the Skedaddle Soil

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic  
*Position on landscape:* Shoulders and back slopes of plateaus, hills, and mountains  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 15 to 50 percent  
*Elevation:* 4,200 to 5,600 feet  
*Dominant present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

### Climatic Data

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 20 percent; pebbles, 25 percent  
*Depth:* 0 to 5 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 8 inches

*Texture:* Weathered bedrock

*Depth:* 8 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 12 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.3 to 1.0 inch

*Water-supplying capacity:* 6 to 9 inches

*Runoff:* Rapid

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits and shoulders of plateau remnants

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,200 to 5,600 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches

*Texture:* Gravelly clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Summits and side slopes of plateaus, hills, and mountains

*Kind of rock:* Basalt

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* North-facing side slopes and back slopes of plateaus and mountains

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### **Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing back slopes of plateaus and mountains

*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Skedaddle and Jaybee soils—VIIIs; Rock outcrop—VIIIIs

*Range site:* Skedaddle soil—023XY030NV; Jaybee soil—023XY047NV; Rock outcrop—none; Inclusion 1—023XY037NV; Inclusion 2—026XY022NV; Inclusion 3—023XY047NV

## 160—Dun Glen-Davey-Hawsley association

### Map Unit Setting

*Position on landscape:* Lake plain terraces, alluvial fans, and sand sheets

### Composition

*Major components:*

- Dun Glen very fine sandy loam, 2 to 4 percent slopes—45 percent
- Davey loamy fine sand, 2 to 4 percent slopes—25 percent
- Hawsley loamy sand, 4 to 15 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Camborthids fine sandy loam, 0 to 4 percent slopes—5 percent
- Inclusion 2: Zorravista fine sand, 2 to 8 percent slopes—4 percent
- Inclusion 3: Badland, 4 to 30 percent slopes—4 percent
- Inclusion 4: Smaug very fine sandy loam, 2 to 8 percent slopes—2 percent

### Characteristics of the Dun Glen Soil

*Classification:* Typic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* The lower lake plain terraces

*Parent material:* Loess and volcanic ash over mixed alluvium

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 4 inches

*Texture:* Very fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 4 to 11 inches

*Texture:* Very fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 11 to 60 inches

*Texture:* Fine sandy loam, very fine sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 6.8 to 8.0 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### Characteristics of the Davey Soil

*Classification:* Xerollic Camborthids, sandy, mixed, mesic

*Position on landscape:* Alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Indian ricegrass

### Climatic Data

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Pebbles, 10 percent

*Depth:* 0 to 4 inches

*Texture:* Loamy fine sand

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 17 inches

*Texture:* Fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 to 42 inches

*Texture:* Loamy fine sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 42 to 60 inches

*Texture:* Silt loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 6.4 to 8.0 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

#### **Characteristics of the Hawsley Soil**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on alluvial fans and lake plain terraces

*Parent material:* Mixed alluvium and water-reworked eolian deposits

*Slope range:* 4 to 15 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Loamy sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 8 to 42 inches

*Texture:* Stratified fine sand and sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 42 to 60 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very rapid

*Available water capacity:* 3.6 to 4.8 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Camborthids, fine-loamy, mixed, mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

##### **Inclusion 2**

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Dunes superimposed on lake plain terraces

*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

#### **Inclusion 3**

*Position on landscape:* Eroded lake plain terraces

*Distinctive present vegetation:* None

#### **Inclusion 4**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Interpretive Groups**

*Capability classification:* Dun Glen soil—IIe, Davey soil—IIIs, Hawsley soil—IVs, irrigated; Dun Glen soil—VIIc, Davey and Hawsley soils—VIIs, nonirrigated

*Range site:* Dun Glen soil—024XY002NV; Davey soil—023XY051NV; Hawsley soil—027XY009NV; Inclusion 1—024XY003NV; Inclusion 2—023XY011NV; Inclusion 3—none; Inclusion 4—024XY004NV

### **170—Zorravista-Davey association**

#### **Map Unit Setting**

*Position on landscape:* Sand dunes, sand sheets, and alluvial fans

#### **Composition**

*Major components:*

- Zorravista fine sand, 2 to 8 percent slopes—50 percent
- Davey loamy fine sand, 2 to 8 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Dun Glen sandy loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Xeric Torriorthents gravelly loamy fine sand, 2 to 4 percent slopes—5 percent
- Inclusion 3: Xerollic Camborthids gravelly loamy sand, 4 to 30 percent slopes—5 percent

#### **Characteristics of the Zorravista Soil**

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Sand dunes and sand sheets superimposed on beach terraces and alluvial fans

*Parent material:* Sandy eolian material derived from mixed rock sources

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 3 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 60 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

#### **181—Tunnison-Devada association**

##### **Map Unit Setting**

*Position on landscape:* Plateaus

### Composition

#### Major components:

- Tunnison cobbly clay, 0 to 8 percent slopes—60 percent
- Devada extremely stony loam, 0 to 8 percent slopes—25 percent

#### Contrasting inclusions:

- Inclusion 1: Tunnison very stony clay, 0 to 8 percent slopes—6 percent
- Inclusion 2: Rock outcrop—5 percent
- Inclusion 3: Lithic Xerollic Camborthids cobbly clay, 0 to 8 percent slopes—4 percent

### Characteristics of the Tunnison Soil

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Rubber rabbitbrush, bottlebrush squirreltail, Hooker balsamroot

#### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### Typical Profile

*Surface cover:* Cobbles, 20 percent; pebbles, 10 percent

*Depth:* 0 to 1 inch

*Texture:* Cobbly clay

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 31 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 31 to 38 inches

*Texture:* Weathered bedrock

*Depth:* 38 inches

*Texture:* Unweathered bedrock

#### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.3 to 4.4 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Devada Soil

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly convex summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### Typical Profile

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

#### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Concave summits of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 31 to 38 inches

*Texture:* Weathered bedrock

*Depth:* 38 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.3 to 4.4 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Rubble Land**

*Position on landscape:* Side slopes of plateaus

*Surface cover:* Stones, boulders, and cobbles, 90 to 100 percent

### **Characteristics of the Very Cobbly Tunnison Soil**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 8 to 15 percent

*Elevation:* 5,700 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 3 percent; cobbles, 40 percent; pebbles, 15 percent

*Depth:* 0 to 1 inch

*Texture:* Very cobbly clay

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 31 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 31 to 38 inches

*Texture:* Weathered bedrock

*Depth:* 38 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.3 to 5.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing side slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 2**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* South- and west-facing side slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* Convex summits and shoulders of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Hooker balsamroot

#### **Inclusion 4**

*Classification:* Pachic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* East-, west-, and south-facing side slopes of plateaus

*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

### **Interpretive Groups**

*Capability classification:* Tunnison soils—VIIIs, nonirrigated; Rubble land—VIIIIs

*Range site:* The cobbly Tunnison soil—023XY001NV; Rubble land—none; the very cobbly Tunnison soil—023XY044NV; Inclusion 1—023XY007NV; Inclusion

2—023XY039NV; Inclusion 3—023XY021NV;  
Inclusion 4—023XY016NV

## 183—Tunnison complex, 0 to 8 percent slopes

### Map Unit Setting

*Position on landscape:* Interplateau basins and plateaus

### Composition

*Major components:*

- Tunnison very cobbly clay, 0 to 8 percent slopes—50 percent
- Tunnison cobbly clay, 0 to 4 percent slopes—40 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids extremely cobbly clay loam, 2 to 8 percent slopes—4 percent
- Inclusion 2: Typic Chromoxererts cobbly clay, 0 to 4 percent slopes—3 percent
- Inclusion 3: Devada extremely cobbly loam, 4 to 8 percent slopes—3 percent

### Characteristics of the Very Cobbly Tunnison Soil

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Interplateau basins

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,700 to 6,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 3 percent; cobbles, 40 percent; pebbles, 15 percent

*Depth:* 0 to 1 inch

*Texture:* Very cobbly clay

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

023XY001NV; Inclusion 1—023XY021NV; Inclusion 2—023XY001NV; Inclusion 3—023XY031NV

## 190—Swingler complex, 2 to 4 percent slopes

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major components:*

- Swingler fine sandy loam, 2 to 4 percent slopes—50 percent
- Swingler loamy sand, 2 to 4 percent slopes—40 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents very fine sandy loam, 4 to 15 percent slopes—8 percent
- Inclusion 2: Veta gravelly fine sandy loam, 2 to 4 percent slopes—2 percent

### Characteristics of Swingler Fine Sandy Loam

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Mixed alluvium over lacustrine sediments

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 6 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 6 to 60 inches

*Texture:* Stratified very fine sandy loam and silt loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Very strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 8.4 to 10.9 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—moderate

*Potential for frost action:* Low

**Characteristics of Swingler Loamy Sand**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Thin sand sheets superimposed on lake plain terraces

*Parent material:* Mixed alluvium over lacustrine sediments

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Black greasewood, Nevada dalea, Indian ricegrass

**Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Loamy sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 4 to 60 inches

*Texture:* Stratified very fine sandy loam and silt loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Very strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 8.4 to 10.9 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—moderate

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Side slopes of lake plain terraces

*Distinctive present vegetation:* Black greasewood, seepweed, shadscale

**Inclusion 2**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Fan aprons adjacent to lake plain terraces

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Swingler fine sandy loam—Ile, irrigated; VIIc, nonirrigated; Swingler loamy sand—VIIs, nonirrigated

*Range site:* Swingler fine sandy loam—024XY003NV; Swingler loamy sand—027XY012NV; Inclusion 1—027XY025NV; Inclusion 2—023XY038NV

**193—Swingler-Ragtown association****Map Unit Setting**

*Position on landscape:* Lake plain terraces

**Composition**

*Major components:*

- Swingler silt loam, 0 to 2 percent slopes—55 percent
- Ragtown clay loam, 0 to 2 percent slopes—30 percent

*Contrasting inclusions:*

- Inclusion 1: Trocken gravelly sandy loam, 0 to 4 percent slopes—6 percent
- Inclusion 2: Playas—6 percent
- Inclusion 3: Mazuma loamy sand, 0 to 4 percent slopes—2 percent
- Inclusion 4: Typic Torriorthents loamy sand, 2 to 8 percent slopes—1 percent

### **Characteristics of the Swingler Soil**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Mixed alluvium over lacustrine sediments

*Texture:* Clay loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches

*Texture:* Clay

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Alluvial fans adjacent to the highest lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Position on landscape:* The lowest part of lake plain terraces  
*Distinctive present vegetation:* None

#### **Inclusion 3**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The higher lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 4**

*Classification:* Typic Torriorthents, sandy, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces  
*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

### **Interpretive Groups**

*Capability classification:* Swingler soil—IIIs, irrigated; Swingler and Ragtown soils—VIIs, nonirrigated

*Available water capacity:* 3.0 to 4.0 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Langston Soil**

*Classification:* Xerollic Haplargids, fine-loamy over sandy or sandy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fan remnants and the upper lake plain terraces

*Parent material:* Mixed alluvium over lacustrine sediments

*Slope range:* 4 to 15 percent

*Elevation:* 4,000 to 4,900 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 2 percent; pebbles, 60 percent

*Depth:* 0 to 4 inches  
*Texture:* Gravelly loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 4 to 20 inches  
*Texture:* Gravelly loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 20 to 60 inches  
*Texture:* Stratified very gravelly sand and extremely gravelly sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.8 to 4.2 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* The higher alluvial fans

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 4**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower alluvial fans and lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Veta soil—IVs, irrigated; Veta soil—VIIs, Langston soil—VIs, nonirrigated

*Range site:* Veta soil—023XY038NV; Langston soil—023XY038NV; Inclusion 1—024XY002NV; Inclusion 2—023XY038NV; Inclusion 3—024XY004NV; Inclusion 4—024XY002NV

## **212—Veta-Trocken association**

### **Map Unit Setting**

*Position on landscape:* Alluvial fans

### **Composition**

*Major components:*

- Veta gravelly sandy loam, 2 to 4 percent slopes—60 percent
- Trocken gravelly sandy loam, 2 to 4 percent slopes—30 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents loamy sand, 0 to 4 percent slopes—8 percent
- Inclusion 2: Typic Torriorthents very fine sandy loam, 0 to 4 percent slopes—2 percent

### **Characteristics of the Veta Soil**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* The upper alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Pebbles, 30 percent

*Depth:* 0 to 6 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 18 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 to 60 inches

*Texture:* Stratified extremely gravelly loamy sand to very gravelly loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 3.0 to 4.0 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

### **Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* The lower alluvial fans  
*Parent material:* Mixed alluvium  
*Slope range:* 2 to 4 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 3 inches  
*Texture:* Gravelly sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches  
*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 3.0 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, sandy, mixed, mesic  
*Position on landscape:* Lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic  
*Position on landscape:* Lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Veta soil—IVs, irrigated; Veta and Trocken soils—VIIs, nonirrigated  
*Range site:* Veta soil—023XY038NV; Trocken soil—024XY002NV; Inclusion 1—024XY002NV; Inclusion 2—024XY002NV

## **220—Cewat very stony fine sandy loam, 4 to 15 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Alluvial fans and beach terraces cut into toe slopes of plateaus

### **Composition**

*Major component:*

- Cewat very stony fine sandy loam, 4 to 15 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Haplargids stony loam, 4 to 15 percent slopes—7 percent
- Inclusion 2: Fluventic Haploxerolls stony loam, 2 to 8 percent slopes—2 percent
- Inclusion 3: Skedaddle very stony loam, 15 to 30 percent slopes—1 percent

### **Characteristics of the Cewat Soil**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Alluvial fans and beach terraces cut into toe slopes of plateaus  
*Parent material:* Water-reworked residuum and colluvium derived from volcanic rock  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,800 to 4,400 feet  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 110 days

### Typical Profile

*Surface cover:* Stones and boulders, 2 percent; cobbles, 45 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony fine sandy loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 30 inches

*Texture:* Very gravelly loam, extremely gravelly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral or moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 30 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 1.8 to 3.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Typic Haplargids, loamy, mixed, mesic, shallow

*Position on landscape:* Slightly concave lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Fluventic Haploxerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Stream terraces adjacent to alluvial fans

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### Inclusion 3

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Hills adjacent to the higher alluvial fans and the toe slopes of plateaus

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

### Interpretive Groups

*Capability classification:* Cewat soil—IVs, irrigated; VIIs, nonirrigated

*Range site:* Cewat soil—023XY038NV; Inclusion 1—024XY002NV; Inclusion 2—023XY005NV; Inclusion 3—023XY030NV

## 241—Benin complex

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major components:*

- Benin silty clay loam, 0 to 2 percent slopes, rarely flooded—50 percent
- Benin silty clay loam, 0 to 2 percent slopes, occasionally flooded—35 percent

*Contrasting inclusions:*

- Inclusion 1: Slaw silty clay loam, 0 to 2 percent slopes—5 percent
- Inclusion 2: Aquic Torriorthents silty clay loam, 0 to 2 percent slopes—5 percent
- Inclusion 3: Benin loamy sand, 0 to 2 percent slopes—3 percent
- Inclusion 4: Zorravista fine sand, 2 to 15 percent slopes—2 percent

### Characteristics of the Rarely Flooded Benin Soil

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Black greasewood, inland saltgrass, basin wildrye

### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 8 to 60 inches  
*Texture:* Silty clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Very hard, very firm  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm  
*Sodicity:* SAR more than 23

**Soil and Water Features**

*Frequency of flooding:* Rare  
*Permeability:* Very slow  
*Available water capacity:* 9.0 to 9.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Characteristics of the Occasionally Flooded Benin Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,100 feet  
*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

**Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 1 inch  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 1 to 60 inches

*Texture:* Silty clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, very firm

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR 23 to 68

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—occasional; duration—very brief; months—November through June  
*Permeability:* Very slow  
*Available water capacity:* 9.0 to 9.8 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torrifluents, fine-silty, mixed (calcareous), mesic  
*Position on landscape:* The lower stream terraces  
*Distinctive present vegetation:* Torrey quailbush, black greasewood, basin wildrye

**Inclusion 2**

*Classification:* Aquic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Lake plain terraces adjacent to seeps  
*Distinctive present vegetation:* Silver buffaloberry, black greasewood, Torrey quailbush, inland saltgrass

**Inclusion 3**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Lake plain terraces adjacent to dunes  
*Distinctive present vegetation:* Torrey quailbush, black greasewood, basin wildrye

**Inclusion 4**

*Classification:* Xeric Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

**Interpretive Groups**

*Capability classification:* The rarely flooded Benin soil—

IVs, irrigated, VIIIs, nonirrigated; the occasionally flooded Benin soil—VIIw, nonirrigated

*Range site:* The rarely flooded Benin soil—024XY011NV; the occasionally flooded Benin soil—024XY015NV; Inclusion 1—024XY015NV; Inclusion 2—024XY063NV; Inclusion 3—024XY015NV; Inclusion 4—023XY011NV

## 250—Old Camp-Reywat-Jaybee association

### *Map Unit Setting*

*Position on landscape:* Hills and mountains

### *Composition*

*Major components:*

- Old Camp very stony loam, 30 to 50 percent slopes—50 percent
- Reywat very stony loam, 30 to 50 percent slopes—25 percent
- Jaybee very cobbly sandy loam, 4 to 15 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Fluventic Haploxerolls stony loam, 2 to 8 percent slopes—2 percent
- Inclusion 3: Bombadil very stony fine sandy loam, 4 to 15 percent slopes—2 percent

### *Characteristics of the Old Camp Soil*

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-, east-, and west-facing back slopes of hills and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 15 percent; pebbles, 35 percent

*Depth:* 0 to 1 inch

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 15 inches

*Texture:* Very stony clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### *Characteristics of the Reywat Soil*

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing back slopes of hills and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; pebbles, 25 percent

*Depth:* 0 to 10 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 14 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 to 19 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 19 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Crests and shoulders of hills and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches

*Texture:* Gravelly clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Ridges and side slopes of hills and mountains

*Distinctive present vegetation:* None

##### **Inclusion 2**

*Classification:* Fluventic Haploxerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Stream terraces adjacent to hills

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

##### **Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* The lower crests and shoulders of hills and mountains

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Interpretive Groups**

*Capability classification:* Old Camp, Reywat, and Jaybee soils—VIIIs, nonirrigated

*Range site:* Old Camp soil—026XY022NV; Reywat soil—023XY039NV; Jaybee soil—023XY047NV; Inclusion 1—none; Inclusion 2—023XY005NV; Inclusion 3—023XY006NV

## **251—Old Camp-Jaybee-Pickup association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

*Major components:*

- Old Camp extremely stony loam, 30 to 50 percent slopes—35 percent
- Jaybee very cobbly sandy loam, 4 to 15 percent slopes—30 percent
- Pickup very stony loam, 30 to 50 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Reywat very stony loam, 30 to 50 percent slopes—3 percent
- Inclusion 3: Skedaddle very stony loam, 30 to 50 percent slopes—1 percent

### **Characteristics of the Old Camp Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing back slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches

*Texture:* Gravelly clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Pickup Soil**

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* North-facing back slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,700 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent

*Depth:* 0 to 8 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 34 inches

*Texture:* Very gravelly clay

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 34 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.2 to 4.4 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing, concave back slopes of plateaus at the higher elevations

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 3**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* The lower back slopes of plateaus north of Smoke Creek

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

### **Interpretive Groups**

*Capability classification:* Old Camp, Jaybee, and Pickup soils—VIIs, nonirrigated

*Range site:* Old Camp soil—026XY022NV; Jaybee soil—023XY047NV; Pickup soil—023XY037NV; Inclusion 1—none; Inclusion 2—023XY039NV; Inclusion 3—023XY030NV

## **258—Old Camp-Reywat-Theon association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Old Camp very gravelly fine sandy loam, 15 to 50 percent slopes—50 percent
- Reywat very stony loam, 30 to 50 percent slopes—25 percent
- Theon very gravelly loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Singatse very stony fine sandy loam, 15 to 50 percent slopes—5 percent

### **Characteristics of the Old Camp Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-, west-, and east-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 14 inches

*Texture:* Very stony clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,700 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches  
*Texture:* Very gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches  
*Texture:* Very cobbly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 18 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 6,000 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 48 degrees F  
*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 7 percent; cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Platy parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 15 inches

*Texture:* Gravelly clay loam, gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic

*Position on landscape:* The lower, south-, east-, and west-facing crests and side slopes of hills

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 2

*Position on landscape:* Crests and side slopes of hills

*Distinctive present vegetation:* None

**Inclusion 3**

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Channels and fanettes adjacent to toe slopes of hills

*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

**Inclusion 4**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Convex back slopes of hills

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

**Interpretive Groups**

*Capability classification:* Pickup and Wylo soils—VIIIs

*Range site:* Pickup soil—023XY037NV; Wylo soil—023XY037NV; Inclusion 1—023XY047NV; Inclusion 2—none; Inclusion 3—027XY029NV; Inclusion 4—023XY030NV

**271—Wylo-Pickup-Bucklake association****Map Unit Setting**

*Position on landscape:* Plateaus

**Composition**

*Major components:*

- Wylo very stony loam, 8 to 30 percent slopes—40 percent
- Pickup very stony loam, 30 to 50 percent slopes—30 percent
- Bucklake extremely stony loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Reywat very stony loam, 30 to 50 percent slopes—9 percent
- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Softscrabble very stony loam, 30 to 50 percent slopes—2 percent

**Characteristics of the Wylo Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 6,000 feet

- Inclusion 1: Skedaddle very cobbly loam, 30 to 75 percent slopes—5 percent
  - Inclusion 2: Typic Torriorthents very cobbly sandy loam, 30 to 75 percent slopes—5 percent
  - Inclusion 3: Devada very stony loam, 15 to 50 percent slopes—3 percent
  - Inclusion 4: Xerollic Haplargids very stony loam, 2 to 15 percent slopes—2 percent

### **Characteristics of the Wylo Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* South-facing back slopes of plateaus and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,700 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Platy parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 15 inches

*Texture:* Gravelly clay loam, gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing back slopes of plateaus and mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 50 to 75 percent

*Elevation:* 4,400 to 5,700 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 18 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Rock Outcrop

*Position on landscape:* Summits and shoulders of plateaus and mountains

*Kind of rock:* Basalt

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* South-facing back slopes of plateaus

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

#### Inclusion 2

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* The lower, west-facing back slopes of plateaus

*Distinctive present vegetation:* Shadscale, desert needlegrass

#### Inclusion 3

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* The higher back slopes of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

#### Inclusion 4

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic

*Position on landscape:* Concave toe slopes of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Interpretive Groups

*Capability classification:* Wylo and Reywat soils—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Wylo soil—023XY037NV; Reywat soil—023XY039NV; Rock outcrop—none; Inclusion 1—023XY030NV; Inclusion 2—027XY027NV; Inclusion 3—023XY031NV; Inclusion 4—023XY047NV

## 280—Bombadil-Old Camp-Reywat association

### Map Unit Setting

*Position on landscape:* Plateaus

### Composition

*Major components:*

- Bombadil very stony fine sandy loam, 8 to 30 percent slopes—45 percent
- Old Camp very stony loam, 30 to 50 percent slopes—25 percent
- Reywat very stony loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Jaybee very cobbly sandy loam, 4 to 15 percent slopes—5 percent
- Inclusion 2: Zorravista fine sand, 2 to 15 percent slopes—4 percent
- Inclusion 3: Softscrabble very stony loam, 30 to 50 percent slopes—3 percent
- Inclusion 4: Rock outcrop—3 percent

### Characteristics of the Bombadil Soil

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basic igneous rock

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 5,900 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches  
*Texture:* Very stony fine sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches  
*Texture:* Loam  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches  
*Texture:* Clay loam  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.1 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Old Camp Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* South-, east-, and west-facing back slopes of plateaus  
*Parent material:* Residuum and colluvium derived from basalt or andesite  
*Slope range:* 30 to 50 percent  
*Elevation:* 4,400 to 5,900 feet  
*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 15 percent; pebbles, 35 percent

*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Small plateau remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Dunes, mostly adjacent to Dry Valley

*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

##### **Inclusion 3**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing, concave back slopes of plateaus at the higher elevations

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

##### **Inclusion 4**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Bombadil, Old Camp, and Reywat soils—VIIIs, irrigated

*Range site:* Bombadil soil—023XY006NV; Old Camp soil—026XY022NV; Reywat soil—023XY039NV; Inclusion 1—023XY047NV; Inclusion 2—023XY011NV; Inclusion 3—023XY041NV; Inclusion 4—none

#### **282—Bombadil-Hefed-Rubble land association**

##### **Map Unit Setting**

*Position on landscape:* Mountains

##### **Composition**

*Major components:*

- Bombadil very stony loam, 15 to 50 percent slopes—45 percent
- Hefed very stony sandy loam, 30 to 75 percent slopes—35 percent
- Rubble land—10 percent

*Contrasting inclusions:*

- Inclusion 1: Fireball very stony sandy loam, 15 to 50 percent slopes—4 percent
- Inclusion 2: Singatse very stony sandy loam, 15 to 50 percent slopes—2 percent

- Inclusion 3: Indiano very stony sandy loam, 15 to 50 percent slopes—2 percent
- Inclusion 4: Rock outcrop—2 percent

### **Characteristics of the Bombadil Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Crests and slightly convex back slopes of mountains

*Parent material:* Residuum and colluvium derived from basic igneous rock

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches

*Texture:* Loam

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches

*Texture:* Clay loam

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.1 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Hefed Soil**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Toe slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 30 to 75 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 30 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 12 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 60 inches

*Texture:* Stratified very cobbly sandy loam and very gravelly sandy loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Mildly alkaline or moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 1.3 to 4.2 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Very rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Rubble Land**

*Position on landscape:* Side slopes of mountains

*Surface cover:* Stones, boulders, and cobbles, 90 to 100 percent

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing toe slopes of mountains

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower, south- and east-facing side slopes of mountains

*Distinctive present vegetation:* Shadscale, desert needlegrass

**Inclusion 3**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* North-facing, concave back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Inclusion 4**

*Position on landscape:* Summits and side slopes of mountains

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Bombadil and Hefed soils—VIIIs, nonirrigated; Rubble land—VIIIs

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches  
*Texture:* Clay loam  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.1 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

### **Characteristics of the Corral Soil**

*Classification:* Xerollic Haplargids, loamy, mixed, mesic, shallow  
*Position on landscape:* Summits and shoulders of plateaus  
*Parent material:* Residuum and colluvium derived from tuff  
*Slope range:* 4 to 15 percent  
*Elevation:* 4,700 to 5,500 feet  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 15 percent

*Depth:* 0 to 4 inches

*Texture:* Stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 12 inches

*Texture:* Loam

*Structure:* Angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.8 to 3.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Back slopes and shoulders of plateaus

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terrace remnants adjacent to the lower shoulders of plateaus

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Lake plain terrace remnants adjacent to the lower shoulders of plateaus

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Bombadil and Corral soils—VIIIs, nonirrigated

*Range site:* Bombadil soil—023XY006NV; Corral soil—023XY006NV; Inclusion 1—023XY006NV; Inclusion 2—024XY004NV; Inclusion 3—023XY038NV

**310—Jaybee-Pickup association****Map Unit Setting**

*Position on landscape:* Plateaus

**Composition**

*Major components:*

- Jaybee very cobbly sandy loam, 4 to 30 percent slopes—70 percent
- Pickup very stony loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Jaybee very cobbly sandy loam, 30 to 50 percent slopes—4 percent
- Inclusion 3: Manogue cobbly clay, 2 to 8 percent slopes—3 percent
- Inclusion 4: Old Camp extremely stony loam, 30 to 50 percent slopes—2 percent

**Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,300 to 5,600 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches  
*Texture:* Very cobbly sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches  
*Texture:* Gravelly clay  
*Structure:* Prismatic  
*Consistence:* Hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 0.9 to 1.7 inches

*Elevation:* 4,300 to 5,700 feet  
*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 30 percent; pebbles, 40 percent

*Depth:* 0 to 6 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 22 inches  
*Texture:* Gravelly clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Very hard, very firm  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 22 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 2.7 to 5.5 inches

*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—8  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### **Characteristics of the Old Camp Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* South- and west-facing back slopes of mountains  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 30 to 50 percent  
*Elevation:* 4,300 to 5,700 feet  
*Dominant present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 15 percent; pebbles, 35 percent

*Depth:* 0 to 2 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 14 inches  
*Texture:* Very stony clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None

*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.0 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic  
*Position on landscape:* Concave crests of mountains  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* North-facing side slopes of mountains  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 3**

*Position on landscape:* Crests and side slopes of mountains  
*Distinctive present vegetation:* None

#### **Inclusion 4**

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic  
*Position on landscape:* The lower lake terraces on toe slopes of mountains  
*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Interpretive Groups**

*Capability classification:* Jaybee, Oppio, and Old Camp soils—VIIIs, nonirrigated  
*Range site:* Jaybee soil—023XY047NV; Oppio soil—023XY047NV; Old Camp soil—026XY022NV; Inclusion 1—023XY047NV; Inclusion 2—023XY039NV; Inclusion 3—none; Inclusion 4—023XY006NV

## **315—Jaybee-Bombadil-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

#### *Major components:*

- Jaybee very cobbly sandy loam, 8 to 15 percent slopes—45 percent
- Bombadil very stony loam, 8 to 15 percent slopes—25 percent
- Rock outcrop—15 percent

#### *Contrasting inclusions:*

- Inclusion 1: Reywat very stony loam, 8 to 30 percent slopes—6 percent
- Inclusion 2: Old Camp very stony loam, 30 to 50 percent slopes—4 percent
- Inclusion 3: Pickup very stony loam, 30 to 50 percent slopes—3 percent
- Inclusion 4: Manogue very cobbly clay, 2 to 8 percent slopes—2 percent

### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* Summits of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 8 to 15 percent  
*Elevation:* 4,300 to 5,700 feet  
*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches  
*Texture:* Very cobbly sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches  
*Texture:* Gravelly clay  
*Structure:* Prismatic  
*Consistence:* Hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 0.9 to 1.7 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

**Characteristics of the Bombadil Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* South-facing back slopes of plateaus  
*Parent material:* Residuum and colluvium derived from basic igneous rock  
*Slope range:* 8 to 15 percent  
*Elevation:* 4,300 to 5,700 feet  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches  
*Texture:* Loam  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches  
*Texture:* Clay loam

*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches  
*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.1 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

**Characteristics of the Rock Outcrop**

*Position on landscape:* Summits and shoulders of plateaus  
*Kind of rock:* Basic igneous rock

**Contrasting Inclusions****Inclusion 1**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* North-facing side slopes of plateaus  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* South-facing back slopes of plateaus  
*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* The higher, north-facing back slopes of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

**Inclusion 4**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* Concave summits of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Jaybee and Bombadil soils—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Jaybee soil—023XY047NV; Bombadil soil—023XY006NV; Rock outcrop—none; Inclusion 1—023XY039NV; Inclusion 2—026XY022NV; Inclusion 3—023XY037NV; Inclusion 4—023XY047NV

**316—Jaybee-Manogue-Fulstone association****Map Unit Setting**

*Position on landscape:* Fan piedmonts and plateau remnants

**Composition**

*Major components:*

- Jaybee very cobbly sandy loam, 4 to 30 percent slopes—50 percent
- Manogue very cobbly clay, 2 to 8 percent slopes—25 percent
- Fulstone very stony loam, 2 to 8 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Bombadil very stony fine sandy loam, 4 to 15 percent slopes—5 percent
- Inclusion 2: Rock outcrop—3 percent
- Inclusion 3: Smaug very fine sandy loam, 4 to 15 percent slopes—2 percent

**Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits and shoulders of plateau remnants

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,400 to 5,200 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Cobbles, 20 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Manogue Soil**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* Concave summits of plateau remnants

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 2 to 8 percent

*Elevation:* 4,400 to 5,200 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; cobbles, 40 percent; pebbles, 10 percent

*Depth:* 0 to 4 inches

*Texture:* Very cobbly clay

*Structure:* Granular

*Consistence:* Hard, very firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 25 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, very firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 25 to 47 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Hard, firm

*Reaction:* Moderately alkaline

*Salinity:* 2 to 8 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 47 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 5.6 to 8.3 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Fulstone Soil**

*Classification:* Abruptic Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,400 to 5,200 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 5 inches

*Texture:* Very stony loam

*Structure:* Platy parting to granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 17 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 to 40 inches

*Texture:* Indurated hardpan

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—7

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 inches

*Texture:* Weathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.8 to 3.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Characteristics of the Oppio Soil

*Classification:* Xerollic Haplargids, fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 2 to 8 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 30 percent; pebbles, 40 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 27 inches

*Texture:* Gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, very firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 27 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.7 to 5.5 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing, convex back slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Inclusion 2**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

**Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Crests of hills and summits of plateaus

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Inclusion 4**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Concave shoulders of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Jaybee, Corral, and Oppio soils—VIIIs, nonirrigated

*Range site:* Jaybee soil—023XY047NV; Corral soil—023XY006NV; Oppio soil—023XY047NV; Inclusion 1—023XY039NV; Inclusion 2—none; Inclusion 3—023XY006NV; Inclusion 4—023XY047NV

**318—Jaybee-Reywat association****Map Unit Setting**

*Position on landscape:* Back slopes of plateaus

**Composition**

*Major components:*

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing back slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,800 to 5,700 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing, concave back slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 2**

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* Alluvial fans adjacent to toe slopes of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Inclusion 3**

*Position on landscape:* Summits and side slopes of plateaus

*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Jaybee and Reywat soils—VII<sub>s</sub>, irrigated

*Range site:* Jaybee soil—023XY047NV; Reywat soil—023XY039NV; Inclusion 1—023XY039NV; Inclusion 2—023XY031NV; Inclusion 3—none

## **330—Hart Camp-Devada association**

### **Map Unit Setting**

*Position on landscape:* Plateau remnants

### **Composition**

*Major components:*

- Hart Camp very stony loam, 8 to 15 percent slopes—65 percent
- Devada extremely stony loam, 2 to 8 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Haplaquolls silt loam, 0 to 2 percent slopes—6 percent
- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Tunnison very cobbly clay, 0 to 8 percent slopes—4 percent
- Inclusion 4: Cumulic Haplaquolls silt loam, 0 to 2 percent slopes—1 percent

### **Characteristics of the Hart Camp Soil**

*Classification:* Aridic Argixerolls, loamy, mixed, frigid, shallow

*Position on landscape:* Shoulders of plateau remnants

*Parent material:* Residuum and colluvium derived from tuff

*Slope range:* 8 to 15 percent  
*Elevation:* 5,500 to 5,900 feet  
*Dominant present vegetation:* Mountain big sagebrush, antelope bitterbrush, bluebunch wheatgrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 45 degrees F  
*Frost-free period:* About 70 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 5 percent; pebbles, 5 percent

*Depth:* 0 to 6 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 15 inches  
*Texture:* Gravelly loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 15 to 19 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.7 to 3.4 inches  
*Water-supplying capacity:* 11 to 13 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic  
*Position on landscape:* Small summits of plateau remnants  
*Parent material:* Residuum derived from basalt

*Slope range:* 2 to 8 percent  
*Elevation:* 5,500 to 5,900 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches  
*Texture:* Extremely stony loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches  
*Texture:* Clay  
*Structure:* Prismatic  
*Consistence:* Very hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 13 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 12 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.5 to 2.6 inches  
*Water-supplying capacity:* 9 to 11 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Haplaquolls, fine-silty, mixed, frigid  
*Position on landscape:* Seeps on side slopes of plateau remnants and the adjacent stream terraces

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

**Inclusion 2**

*Position on landscape:* Summits of plateaus

*Distinctive present vegetation:* None

**Inclusion 3**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic

*Position on landscape:* Summits of plateau remnants

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Inclusion 4**

*Classification:* Cumulic Haplaquolls, fine-silty, mixed, frigid

*Position on landscape:* Toe slopes of plateaus adjacent to springs

*Distinctive present vegetation:* Rubber rabbitbrush, rush, sedge

**Interpretive Groups**

*Capability classification:* Hart Camp and Devada soils—VIIs, nonirrigated

*Range site:* Hart Camp soil—023XY015NV; Devada soil—023XY031NV; Inclusion 1—023XY009NV; Inclusion 2—none; Inclusion 3—023XY044NV; Inclusion 4—023XY025NV

**340—Reywat-Rock outcrop complex, 15 to 50 percent slopes**

**Map Unit Setting**

*Position on landscape:* Side slopes of mountains

**Composition**

*Major components:*

- Reywat extremely stony loam, 15 to 50 percent slopes—65 percent
- Rock outcrop—25 percent

*Contrasting inclusions:*

- Inclusion 1: Softscabble very stony loam, 30 to 75 percent slopes—8 percent
- Inclusion 2: Bucklake very stony loam, 30 to 50 percent slopes—2 percent

**Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Shoulders and back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,600 to 6,000 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 15 percent; cobbles, 5 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Extremely stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Summits and side slopes of mountains

*Kind of rock:* Basalt

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Slightly concave back slopes of mountains at the higher elevations

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

#### **Inclusion 2**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* South-facing back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Interpretive Groups**

*Capability classification:* Reywat soil—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Reywat soil—023XY039NV; Rock outcrop—none; Inclusion 1—023XY041NV; Inclusion 2—023XY039NV

## **344—Reywat-Ister association**

### **Map Unit Setting**

*Position on landscape:* Back slopes of hills

### **Composition**

*Major components:*

- Reywat very cobbly sandy loam, 8 to 30 percent slopes—75 percent
- Ister very stony loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Terca very gravelly loam, 30 to 50 percent slopes—5 percent
- Inclusion 2: Softscrabble stony loam, 30 to 50 percent slopes—3 percent
- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Reywat Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Convex back slopes of hills

*Parent material:* Residuum and colluvium derived from andesite or rhyolite

*Slope range:* 8 to 30 percent

*Elevation:* 5,400 to 6,000 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 80 days

### **Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 50 to 75 percent

*Elevation:* 5,000 to 6,000 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 3 inches

*Texture:* Very stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 17 inches

*Texture:* Gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.3 to 1.8 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Convex back slopes of mountains

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 30 to 50 percent

*Elevation:* 5,000 to 6,000 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 15 percent; pebbles, 15 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.02; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Back slopes of mountains

*Kind of rock:* Andesite or basalt

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* The higher, west-facing back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 2**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Concave, north-facing side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 3**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* Concave, south-, east-, and west-facing side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 4**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* The lower, convex, south-facing side slopes of mountains

*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass, spiny hopsage

### **Interpretive Groups**

*Capability classification:* Terca and Devada soils—VIIs, nonirrigated; Rock outcrop—VIIIs

*Range site:* Terca soil—023XY039NV; Devada soil—023XY031NV; Rock outcrop—none; Inclusion 1—023XY039NV; Inclusion 2—023XY007NV; Inclusion 3—023XY039NV; Inclusion 4—023XY030NV

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Wylo Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Summits and shoulders of plateau remnants

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

**Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Platy parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 15 inches

*Texture:* Gravelly clay loam, gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Abruptic Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Fan piedmont remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* The lower areas on summits and shoulders of plateau remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Inclusion 3**

*Position on landscape:* Plateau remnants

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Fulstone and Wylo soils—VIIIs, nonirrigated

*Range site:* Fulstone soil—023XY047NV; Wylo soil—023XY037NV; Inclusion 1—023XY047NV; Inclusion 2—023XY047NV; Inclusion 3—none

**421—Fulstone-Chalco association****Map Unit Setting**

*Position on landscape:* Fan piedmonts superimposed on pediments

**Composition**

*Major components:*

- Fulstone very stony loam, 4 to 8 percent slopes—65 percent
- Chalco very stony loam, 8 to 15 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Buffaran cobbly clay loam, 2 to 8 percent slopes—6 percent
- Inclusion 2: Aquic Torriorthents loam, 0 to 8 percent slopes—4 percent
- Inclusion 3: Rock outcrop—3 percent
- Inclusion 4: Xerollic Haplargids cobbly sandy loam, 2 to 8 percent slopes—2 percent

**Characteristics of the Fulstone Soil**

*Classification:* Abruptic Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits of fan piedmont remnants superimposed on pediment remnants

*Parent material:* Mixed alluvium

*Slope range:* 4 to 8 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 5 inches

*Texture:* Very stony loam

*Structure:* Platy parting to granular

*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 5 to 17 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 to 40 inches

*Texture:* Indurated hardpan

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

## **441—Rezave-Theon association**

### **Map Unit Setting**

*Position on landscape:* Hills

### **Composition**

*Major components:*

- Rezave very gravelly loam, 4 to 30 percent slopes—65 percent
- Theon very gravelly loam, 8 to 30 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Fluventic Haploxerolls stony loam, 2 to 4 percent slopes—3 percent
- Inclusion 2: Xeric Torriorthents very gravelly loamy sand, 2 to 4 percent slopes—3 percent
- Inclusion 3: Singatse very gravelly loam, 15 to 50 percent slopes—2 percent
- Inclusion 4: Rock outcrop—2 percent

### **Characteristics of the Rezave Soil**

*Classification:* Lithic Natrargids, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly concave crests and shoulders of hills

*Parent material:* Residuum derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 50 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 2 to 15 inches

*Texture:* Clay loam

*Structure:* Prismatic, angular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR 13 to 30

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.6 to 2.3 inches

*Water-supplying capacity:* 6 to 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Theon Soil**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Slightly convex crests and shoulders of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 8 to 30 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Shadscale, Bailey greasewood, bottlebrush squirreltail, desert needlegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 2 to 11 inches  
*Texture:* Very gravelly loam, very gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 11 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 8 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 0.6 to 1.0 inch  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Fluventic Haploxerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Stream terraces adjacent to toe slopes of hills  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### Inclusion 2

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Channels adjacent to toe slopes of hills  
*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

#### Inclusion 3

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Back slopes of hills  
*Distinctive present vegetation:* Shadscale, desert needlegrass

#### Inclusion 4

*Position on landscape:* Crests and side slopes of hills  
*Distinctive present vegetation:* None

### Interpretive Groups

*Capability classification:* Rezave and Theon soils—VIIIs, nonirrigated  
*Range site:* Rezave soil—027XY013NV; Theon soil—027XY019NV; Inclusion 1—023XY005NV; Inclusion 2—027XY029NV; Inclusion 3—027XY027NV; Inclusion 4—none

### 460—Chill-Jaybee association

#### Map Unit Setting

*Position on landscape:* Back slopes of hills

#### Composition

*Major components:*

- Chill very stony sandy loam, 30 to 50 percent slopes—50 percent
- Jaybee very cobbly loam, 30 to 50 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Ister very cobbly loam, 15 to 50 percent slopes—5 percent
- Inclusion 2: Xerollic Haplargids stony loam, 2 to 15 percent slopes—4 percent
- Inclusion 3: Chill very stony loam, 4 to 15 percent slopes—4 percent
- Inclusion 4: Rock outcrop—2 percent

#### Characteristics of the Chill Soil

*Classification:* Xerollic Haplargids, loamy, mixed, mesic, shallow

*Position on landscape:* Back slopes of hills

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 14 inches  
*Texture:* Gravelly sandy clay loam  
*Structure:* Subangular blocky  
*Consistence:* Hard, firm  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 to 21 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 6 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 0.6 to 1.5 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid

2—023XY006NV; Inclusion 3—023XY006NV;  
Inclusion 4—none

## 491—Oppio very stony loam, 4 to 15 percent slopes

### Map Unit Setting

*Position on landscape:* Summits of plateaus

### Composition

*Major component:*

- Oppio very stony loam, 4 to 15 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Manogue cobbly clay, 2 to 8 percent slopes—3 percent
- Inclusion 2: Haybourne gravelly sandy loam, 2 to 8 percent slopes—3 percent
- Inclusion 3: Zorravista fine sand, 4 to 15 percent slopes—3 percent
- Inclusion 4: Rock outcrop—1 percent

### Characteristics of the Oppio Soil

*Classification:* Xerollic Haplargids, fine, montmorillonitic, mesic

*Position on landscape:* Summits of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 30 percent; pebbles, 40 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 27 inches

*Texture:* Gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, very firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 27 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.7 to 5.5 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* Alluvial fans adjacent to toe slopes of hills

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Inclusion 3

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Dunes superimposed on plateaus

*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

#### Inclusion 4

*Position on landscape:* Rims of plateaus

*Distinctive present vegetation:* None

### Interpretive Groups

*Capability classification:* Oppio soil—VIIs, nonirrigated

*Range site:* Oppio soil—023XY047NV; Inclusion 1—023XY047NV; Inclusion 2—023XY006NV; Inclusion 3—023XY011NV; Inclusion 4—none

## 500—Smaug very fine sandy loam, 2 to 8 percent slopes

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major component:*

- Smaug very fine sandy loam, 2 to 8 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Camborthids fine sandy loam, 2 to 8 percent slopes—8 percent
- Inclusion 2: Swinger fine sandy loam, 0 to 4 percent slopes—4 percent
- Inclusion 3: Typic Torriorthents very fine sandy loam, 8 to 30 percent slopes—2 percent
- Inclusion 4: Zorravista fine sand, 2 to 8 percent slopes—1 percent

### Characteristics of the Smaug Soil

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Silty lacustrine material

*Slope range:* 2 to 8 percent

*Elevation:* 4,000 to 4,400 feet

*Dominant present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 10 inches

*Texture:* Very fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 10 to 60 inches

*Texture:* Silt loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 8 to 16 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 8.3 to 9.5 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—moderate

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Typic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* Fan aprons below lake plain terraces

*Distinctive present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

#### Inclusion 3

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Side slopes of lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Inclusion 4

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Dunes superimposed on lake plain terraces

*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

### Interpretive Groups

*Capability classification:* Smaug soil—VII<sub>s</sub>, nonirrigated

*Range site:* Smaug soil—024XY004NV; Inclusion 1—024XY014NV; Inclusion 2—024XY003NV; Inclusion 3—024XY002NV; Inclusion 4—023XY011NV

## 510—Bucklake-Bombadil-Reywat association

### Map Unit Setting

*Position on landscape:* Plateaus

### **Composition**

#### *Major components:*

- Bucklake extremely stony loam, 30 to 50 percent slopes—40 percent
- Bombadil very stony loam, 4 to 15 percent slopes—30 percent
- Reywat very stony loam, 30 to 50 percent slopes—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Devada very stony loam, 2 to 15 percent slopes—3 percent
- Inclusion 3: Skedaddle stony loam, 15 to 50 percent slopes—2 percent

### **Characteristics of the Bucklake Soil**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* South-facing side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,900 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 85 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 17 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Extremely stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 12 inches

*Texture:* Gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 24 inches

*Texture:* Gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 24 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.9 to 5.8 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Bombadil Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Summits of plateaus

*Parent material:* Residuum and colluvium derived from basic igneous rock

*Slope range:* 4 to 15 percent

*Elevation:* 4,400 to 5,900 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches

*Texture:* Loam

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches  
*Texture:* Clay loam  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.1 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Reywat Soil

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* North-facing side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,900 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 4 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 18 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Rims of plateaus

*Distinctive present vegetation:* None

#### Inclusion 2

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Summits of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

#### Inclusion 3

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Slightly convex side slopes of plateaus

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

### **Interpretive Groups**

*Capability classification:* Bucklake, Bombadil, and Reywat soils—VIIIs, nonirrigated

*Range site:* Bucklake soil—023XY039NV; Bombadil soil—023XY006NV; Reywat soil—023XY039NV; Inclusion 1—none; Inclusion 2—023XY031NV; Inclusion 3—023XY030NV

## **511—Bucklake-Corral-Rubble land association**

### **Map Unit Setting**

*Position on landscape:* Side slopes of plateaus

### **Composition**

*Major components:*

- Bucklake extremely stony loam, 30 to 50 percent slopes—40 percent
- Corral extremely stony loam, 30 to 50 percent slopes—25 percent
- Rubble land—20 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Reywat very stony loam, 30 to 50 percent slopes—5 percent
- Inclusion 3: Corral extremely stony loam, 50 to 75 percent slopes—3 percent
- Inclusion 4: Chalco very stony loam, 15 to 50 percent slopes—2 percent

### **Characteristics of the Bucklake Soil**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* The upper side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 4,700 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 17 percent; cobbles, 25 percent; pebbles, 20 percent  
*Depth:* 0 to 4 inches  
*Texture:* Extremely stony loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Slight

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aridic Argixerolls, loamy, mixed, frigid, shallow

*Position on landscape:* North-facing side slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush, bluebunch wheatgrass

#### Inclusion 2

*Position on landscape:* Rims of plateaus

*Distinctive present vegetation:* None

#### Inclusion 3

*Classification:* Cumulic Haplaquolls, fine-loamy, mixed, frigid

*Position on landscape:* Side slopes of plateaus adjacent to springs

*Distinctive present vegetation:* Rubber rabbitbrush, rush, sedge

### Interpretive Groups

*Capability classification:* Bucklake, Reywat, and Devada soils—Vlls, nonirrigated

*Range site:* Bucklake soil—023XY039NV; Reywat soil—023XY039NV; Devada soil—023XY031NV;

Inclusion 1—023XY015NV; Inclusion 2—none;  
 Inclusion 3—023XY025NV

## 517—Bucklake-Softscrabble-Devada association

### Map Unit Setting

*Position on landscape:* Mountains

### Composition

*Major components:*

- Bucklake very stony loam, 15 to 50 percent slopes—35 percent
- Softscrabble very stony loam, 15 to 50 percent slopes—30 percent
- Devada very stony loam, 4 to 30 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Wylo very stony loam, 2 to 15 percent slopes—6 percent
- Inclusion 2: Xerollic Haplargids very stony sandy loam, 15 to 50 percent slopes—4 percent
- Inclusion 3: Rock outcrop—3 percent
- Inclusion 4: Cumulic Haplaquolls loam, 2 to 30 percent slopes—2 percent

### Characteristics of the Bucklake Soil

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* South-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 5,000 to 6,200 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 85 days

### Typical Profile

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 12 inches  
*Texture:* Gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 12 to 24 inches  
*Texture:* Gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 24 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 2.9 to 5.8 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Softscrabble Soil**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* North-facing back slopes of mountains  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 15 to 50 percent  
*Elevation:* 5,000 to 6,200 feet  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 14 inches  
*Average annual air temperature:* About 45 degrees F  
*Frost-free period:* About 65 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 20 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 20 to 32 inches  
*Texture:* Very cobbly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 32 to 61 inches  
*Texture:* Gravelly loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 61 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 60 to 80 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.2 to 8.7 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic  
*Position on landscape:* Crests and shoulders of mountains  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 4 to 30 percent  
*Elevation:* 5,000 to 6,200 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 15 percent; pebbles, 15 percent

**540—Mazuma complex, 0 to 4 percent slopes****Map Unit Setting**

*Position on landscape:* Lake plain terraces

**Composition**

*Major components:*

- Mazuma loamy fine sand, 0 to 2 percent slopes—60 percent
- Mazuma fine sandy loam, 0 to 4 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Isolde fine sand, 2 to 15 percent slopes—7 percent
- Inclusion 2: Swingler fine sandy loam, 0 to 2 percent slopes—4 percent
- Inclusion 3: Mostly very fine sandy loam, 0 to 2 percent slopes—3 percent

- Inclusion 4: Umberland loam, 0 to 2 percent slopes—1 percent

### **Characteristics of Mazuma Loamy Fine Sand**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Black greasewood, Nevada dalea, Indian ricegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 10 inches

*Texture:* Loamy fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 10 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of Mazuma Fine Sandy Loam**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Slightly concave lake plain terraces at the lower elevations

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* 8 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

*Depth:* 8 to 30 inches

*Texture:* Sandy loam, fine sandy loam

*Structure:* Subangular blocky or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline or very strongly alkaline

*Salinity:* More than 8 mmhos per cm

*Sodicity:* SAR 13 to 36

*Depth:* 30 to 60 inches

*Texture:* Stratified silt loam to sand

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline to very strongly alkaline

*Salinity:* More than 2 mmhos per cm

*Sodicity:* SAR 13 to 36

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Position on landscape:* The higher lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Silt loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 8 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

*Depth:* 8 to 30 inches

*Texture:* Sandy loam, fine sandy loam

*Structure:* Subangular blocky or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline or very strongly alkaline

*Salinity:* More than 8 mmhos per cm

*Sodicity:* SAR 13 to 36

*Depth:* 30 to 60 inches

*Texture:* Stratified silt loam to sand

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline to very strongly alkaline

*Salinity:* More than 2 mmhos per cm

*Sodicity:* SAR 13 to 36

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,200 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Eroded lake plain terraces  
*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces  
*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### **Inclusion 3**

*Position on landscape:* Undrained basins on lake plain terraces  
*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Mazuma and Ragtown soils—VIIs, nonirrigated  
*Range site:* Mazuma soil—024XY003NV; Ragtown soil—027XY025NV; Inclusion 1—024XY003NV; Inclusion 2—027XY016NV; Inclusion 3—none

## **543—Mazuma-Swangler association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major components:*

- Mazuma fine sandy loam, 0 to 4 percent slopes—50 percent
  - Swangler silt loam, 0 to 2 percent slopes—35 percent
- Contrasting inclusions:*
- Inclusion 1: Umlerland silty clay, 0 to 2 percent slopes—5 percent
  - Inclusion 2: Badland, 4 to 30 percent slopes—4 percent
  - Inclusion 3: Mostly fine sandy loam, 0 to 4 percent slopes—3 percent
  - Inclusion 4: Veta very gravelly loamy sand, 2 to 8 percent slopes—3 percent

### **Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The higher lake plain terraces  
*Parent material:* Loamy lacustrine material  
*Slope range:* 0 to 4 percent

*Potential for frost action:* Low

#### **Characteristics of the Swinger Soil**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Mixed alluvium over lacustrine sediments  
*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,200 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 20 percent  
*Depth:* 0 to 6 inches  
*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 6 to 19 inches  
*Texture:* Loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 23 to 68

*Depth:* 19 to 60 inches  
*Texture:* Silt loam, very fine sandy loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 60 to 70 inches  
*Texture:* Stratified silty clay loam and silty clay  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 8.4 to 10.9 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Depressions on lake plain terraces

*Distinctive present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Eroded lake plain terraces

*Distinctive present vegetation:* None

#### **Inclusion 3**

*Classification:* Durorthidic Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Stream terraces

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### **Inclusion 4**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans adjacent to lake plain terraces

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Swingler soil—IIIs, irrigated; Mazuma and Swingler soils—VIIs, nonirrigated

*Range site:* Mazuma soil—024XY003NV; Swingler soil—027XY025NV; Inclusion 1—024XY015NV; Inclusion 2—none; Inclusion 3—024XY006NV; Inclusion 4—023XY038NV

## **545—Mazuma-Davey association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major components:*

- Mazuma fine sandy loam, 2 to 8 percent slopes—40 percent
- Davey sandy loam, 2 to 8 percent slopes—25 percent
- Mazuma fine sandy loam, moderately saline, 2 to 4 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Mostly fine sandy loam, 0 to 4 percent slopes—7 percent
- Inclusion 2: Smaug silt loam, 2 to 8 percent slopes—5 percent

- Inclusion 3: Zorravista fine sand, 2 to 15 percent slopes—3 percent

### **Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* The middle or lower lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Davey Soil**

*Classification:* Xerollic Camborthids, sandy, mixed, mesic

*Position on landscape:* The upper lake plain terraces

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 14 inches

*Texture:* Fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 14 to 67 inches

*Texture:* Fine sand, loamy fine sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.9 to 6.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

#### **Characteristics of the Moderately Saline Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces at the lower elevations

*Parent material:* Loamy lacustrine material

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches

### **Interpretive Groups**

*Capability classification:* Mazuma soil—VIIIs, nonirrigated

*Range site:* Mazuma soil—024XY003NV; Inclusion 1—024XY002NV; Inclusion 2—024XY041NV; Inclusion 3—024XY015NV; Inclusion 4—none

## **548—Mazuma silt loam, 0 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major component:*

- Mazuma silt loam, 0 to 4 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Badland, 4 to 30 percent slopes—6 percent
- Inclusion 2: Aeric Fluvaquents silt loam, 0 to 2 percent slopes—2 percent
- Inclusion 3: Typic Torriorthents fine sandy loam, 0 to 2 percent slopes—2 percent

### **Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 8 to 30 inches  
*Texture:* Sandy loam, fine sandy loam  
*Structure:* Subangular blocky or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline or very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 36

*Depth:* 30 to 60 inches  
*Texture:* Stratified silt loam to sand  
*Structure:* Platy, single grained, or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline to very strongly alkaline  
*Salinity:* More than 2 mmhos per cm  
*Sodicity:* SAR 13 to 36

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.2 to 8.4 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Eroded lake plain terraces  
*Distinctive present vegetation:* None

##### **Inclusion 2**

*Classification:* Aeric Fluvaquents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Channels cut into lake plain terraces  
*Distinctive present vegetation:* Inland saltgrass, Baltic rush, black greasewood

##### **Inclusion 3**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Alluvial flats adjacent to lake plain terraces  
*Distinctive present vegetation:* Black greasewood, inland saltgrass, basin wildrye

#### **Interpretive Groups**

*Capability classification:* Mazuma soil—VIIs, nonirrigated  
*Range site:* Mazuma soil—027XY025NV; Inclusion 1—none; Inclusion 2—024XY044NV; Inclusion 3—024XY011NV

### **549—Mazuma-Smaug association**

#### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

#### **Composition**

*Major components:*

- Mazuma fine sandy loam, 0 to 4 percent slopes—45 percent
  - Smaug fine sandy loam, 0 to 4 percent slopes—40 percent
- Contrasting inclusions:*
- Inclusion 1: Juva fine sandy loam, 0 to 4 percent slopes—7 percent
  - Inclusion 2: Hawsley loamy fine sand, 2 to 8 percent slopes—5 percent
  - Inclusion 3: Xeric Torriorthents gravelly loamy fine sand, 0 to 2 percent slopes—3 percent

#### **Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The slightly higher lake plain terraces  
*Parent material:* Loamy lacustrine material  
*Slope range:* 0 to 4 percent  
*Elevation:* 4,000 to 4,200 feet  
*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile***Depth:* 0 to 8 inches*Texture:* Fine sandy loam*Structure:* Platy*Consistence:* Soft, very friable*Reaction:* Strongly alkaline*Salinity:* Less than 4 mmhos per cm*Sodicity:* SAR less than 13*Depth:* 8 to 60 inches*Texture:* Stratified loamy fine sand to silt loam*Structure:* Platy, single grained, or massive*Consistence:* Slightly hard, very friable*Reaction:* Strongly alkaline*Salinity:* 4 to 16 mmhos per cm*Sodicity:* SAR 13 to 23**Soil and Water Features***Depth to a seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* Moderately rapid*Available water capacity:* 6.2 to 8.4 inches*Water-supplying capacity:* 5 to 7 inches*Runoff:* Slow*Hydrologic group:* B*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Low*Corrosivity:* Steel—high; concrete—high*Potential for frost action:* Low**Characteristics of the Smaug Soil***Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic*Position on landscape:* The slightly lower lake plain terraces*Parent material:* Silty lacustrine material*Slope range:* 0 to 4 percent*Elevation:* 4,000 to 4,200 feet*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail**Climatic Data***Average annual precipitation:* About 7 inches*Average annual air temperature:* About 51 degrees F*Frost-free period:* About 120 days**Typical Profile***Depth:* 0 to 10 inches*Texture:* Fine sandy loam*Structure:* Subangular blocky*Consistence:* Soft, very friable*Reaction:* Moderately alkaline*Salinity:* 2 to 4 mmhos per cm*Sodicity:* SAR less than 6*Depth:* 10 to 60 inches*Texture:* Silt loam*Structure:* Platy*Consistence:* Slightly hard, very friable*Reaction:* Moderately alkaline*Salinity:* 8 to 16 mmhos per cm*Sodicity:* SAR less than 2**Soil and Water Features***Depth to a seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* Moderately slow*Available water capacity:* 8.3 to 9.5 inches*Water-supplying capacity:* 5 to 7 inches*Runoff:* Slow*Hydrologic group:* B*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Low*Corrosivity:* Steel—high; concrete—moderate*Potential for frost action:* Low**Contrasting Inclusions****Inclusion 1***Classification:* Typic Torrifluvents, coarse-loamy, mixed (calcareous), mesic*Position on landscape:* Alluvial fans adjacent to lake plain terraces*Distinctive present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail**Inclusion 2***Classification:* Typic Torripsamments, mixed, mesic*Position on landscape:* Sand sheets superimposed on lake plain terraces*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass**Inclusion 3***Classification:* Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic*Position on landscape:* Stream terraces cut into lake plain terraces*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage**Interpretive Groups***Capability classification:* Mazuma soil—Ile, irrigated; Mazuma soil—VIIc, Smaug soil—VIIs, nonirrigated

## 560—Toulon-Mazuma-Hawsley association

### Map Unit Setting

*Position on landscape:* Lake plain terraces, beach terraces, and sand sheets

### Composition

*Major components:*

- Toulon gravelly loam, 2 to 8 percent slopes—35 percent
- Mazuma loamy fine sand, 0 to 4 percent slopes—30 percent
- Hawsley loamy sand, 2 to 8 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Mazuma fine sandy loam, 2 to 8 percent slopes—8 percent
- Inclusion 2: Davey gravelly sandy loam, 4 to 15 percent slopes—4 percent
- Inclusion 3: Typic Camborthids very fine sandy loam, 4 to 15 percent slopes—2 percent
- Inclusion 4: Mostly fine sandy loam, 0 to 4 percent slopes—1 percent

### Characteristics of the Toulon Soil

*Classification:* Typic Camborthids, sandy-skeletal, mixed, mesic

*Position on landscape:* The middle and upper beach terraces

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Cobbles, 5 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Gravelly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 4 to 15 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 15 to 60 inches

*Texture:* Extremely cobbly coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.4 to 4.2 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### Characteristics of the Mazuma Soil

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Black greasewood, Nevada dalea, Indian ricegrass

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 8 inches

*Texture:* Loamy fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches  
*Texture:* Stratified loamy fine sand to silt loam  
*Structure:* Platy, single grained, or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.2 to 8.4 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—2  
*Hazard of erosion:* By water—slight; by wind—moderate  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Characteristics of the Hawsley Soil**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Sand sheets superimposed on the upper lake plain terraces  
*Parent material:* Mixed alluvium and water-reworked eolian deposits  
*Slope range:* 2 to 8 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Loamy sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 8 to 42 inches  
*Texture:* Stratified fine sand and sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 42 to 60 inches  
*Texture:* Fine sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very rapid  
*Available water capacity:* 3.6 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—2  
*Hazard of erosion:* By water—slight; by wind—moderate  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Xerollic Camborthids, sandy, mixed, mesic  
*Position on landscape:* The upper lake plain terraces  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

##### **Inclusion 3**

*Classification:* Typic Camborthids, coarse-silty, mixed mesic  
*Position on landscape:* The lower lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

##### **Inclusion 4**

*Classification:* Durorthidic Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Stream terraces cut into lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

### **Interpretive Groups**

*Capability classification:* Toulon soil—IVe, Mazuma soil—IIs, Hawsley soil—IVs, irrigated; Toulon, Mazuma, and Hawsley soils—VIIs, nonirrigated

*Range site:* Toulon soil—024XY002NV; Mazuma soil—027XY012NV; Hawsley soil—027XY009NV; Inclusion 1—024XY002NV; Inclusion 2—024XY020NV; Inclusion 3—024XY002NV; Inclusion 4—024XY006NV

## **561—Toulon-Trocken-Mazuma association**

### **Map Unit Setting**

*Position on landscape:* Beach terraces and lake plain terrace remnants

### **Composition**

*Major components:*

- Toulon very cobbly loam, 4 to 8 percent slopes—45 percent
- Trocken gravelly sandy loam, 4 to 8 percent slopes—25 percent
- Mazuma fine sandy loam, 2 to 8 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents fine sandy loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Hawsley fine sand, 4 to 15 percent slopes—5 percent
- Inclusion 3: Xerollic Camborthids gravelly loamy sand, 4 to 8 percent slopes—5 percent

### **Characteristics of the Toulon Soil**

*Classification:* Typic Camborthids, sandy-skeletal, mixed, mesic

*Position on landscape:* Beach terraces adjacent to hills and pediment remnants

*Parent material:* Mixed alluvium

*Slope range:* 4 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Cobbles, 15 percent; pebbles, 20 percent

*Depth:* 0 to 4 inches

*Texture:* Very cobbly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 4 to 15 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 15 to 60 inches

*Texture:* Extremely cobbly coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### Contrasting Inclusions

##### Inclusion 1

*Position on landscape:* Rims of plateaus  
*Distinctive present vegetation:* None

##### Inclusion 2

*Classification:* Xeric Torriorthents, loamy, mixed, nonacid, mesic, shallow  
*Position on landscape:* Back slopes of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

##### Inclusion 3

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic  
*Position on landscape:* Small summits of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

##### Inclusion 4

*Classification:* Typic Natrargids, fine, montmorillonitic, mesic  
*Position on landscape:* Toe slopes of plateaus  
*Distinctive present vegetation:* Black greasewood, seepweed, shadscale

#### Interpretive Groups

*Capability classification:* Verdico and Corral soils—VIIs, nonirrigated  
*Range site:* Verdico soil—023XY047NV; Corral soil—023XY006NV; Inclusion 1—none; Inclusion 2—

023XY047NV; Inclusion 3—023XY047NV; Inclusion 4—027XY025NV

## 581—Verdico-Chalco association

### Map Unit Setting

*Position on landscape:* Plateaus

### Composition

#### Major components:

- Verdico cobbly sandy loam, 8 to 30 percent slopes—45 percent
- Chalco very stony clay loam, 8 to 30 percent slopes—40 percent

#### Contrasting inclusions:

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Old Camp very stony loam, 30 to 50 percent slopes—4 percent
- Inclusion 3: Xerollic Paleargids very stony fine sandy loam, 2 to 15 percent slopes—3 percent
- Inclusion 4: Tunnison very cobbly clay, 0 to 8 percent slopes—3 percent

### Characteristics of the Verdico Soil

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Shoulders of plateaus

*Parent material:* Residuum and colluvium derived from tuff

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Cobbles, 20 percent; pebbles, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Cobbly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 23 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Extremely hard, very firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 23 to 30 inches  
*Texture:* Gravelly clay  
*Structure:* Massive  
*Consistence:* Very hard, very firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 30 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 3.0 to 6.0 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—5  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Chalco Soil**

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic, shallow  
*Position on landscape:* Shoulders of plateaus  
*Parent material:* Residuum and colluvium derived from tuff  
*Slope range:* 8 to 30 percent  
*Elevation:* 4,400 to 5,300 feet  
*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 8 percent; cobbles, 8 percent; pebbles, 35 percent  
*Depth:* 0 to 1 inch  
*Texture:* Very stony clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 1 to 10 inches  
*Texture:* Clay  
*Structure:* Angular blocky  
*Consistence:* Hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 1.3 to 2.6 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Rims of plateaus  
*Distinctive present vegetation:* None

##### **Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* South-facing back slopes of plateaus  
*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

##### **Inclusion 3**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic  
*Position on landscape:* Concave summits and shoulders of plateaus

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

##### **Inclusion 4**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic  
*Position on landscape:* Summits of plateaus  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Verdico and Chalco soils—VIIIs, nonirrigated

*Range site:* Verdico soil—023XY037NV; Chalco soil—023XY037NV; Inclusion 1—none; Inclusion 2—026XY022NV; Inclusion 3—023XY037NV; Inclusion 4—023XY044NV

## **590—Buffaran stony loam, 2 to 15 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan piedmont remnants

### **Composition**

*Major component:*

- Buffaran stony loam, 2 to 15 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Fulstone very stony loam, 2 to 15 percent slopes—4 percent
- Inclusion 2: Corral stony loam, 8 to 30 percent slopes—4 percent
- Inclusion 3: Xeric Torriorthents stony loam, 8 to 30 percent slopes—4 percent
- Inclusion 4: Rock outcrop—3 percent

### **Characteristics of the Buffaran Soil**

*Classification:* Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 15 percent

*Elevation:* 4,400 to 5,800 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 2 inches

*Texture:* Stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches

*Texture:* Gravelly clay loam

*Structure:* Prismatic parting to angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral or mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 to 27 inches

*Texture:* Indurated hardpan

*Depth:* 27 to 60 inches

*Texture:* Cemented hardpan

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.9 to 2.6 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Abruptic Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits of fan piedmont remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Concave side slopes of fan piedmont remnants

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Inclusion 3**

*Classification:* Xeric Torriorthents, loamy, mixed, nonacid, mesic, shallow

*Position on landscape:* Convex side slopes of fan piedmont remnants

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

**Inclusion 4**

*Position on landscape:* Side slopes of fan piedmont remnants

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Buffaran soil—VIIs, nonirrigated

*Range site:* Buffaran soil—023XY006NV; Inclusion 1—023XY047NV; Inclusion 2—023XY006NV; Inclusion 3—023XY030NV; Inclusion 4—none

**591—Buffaran-Bombadil-Rock outcrop association****Map Unit Setting**

*Position on landscape:* Fan piedmont remnants and old lake terraces partly superimposed on hills

**Composition**

*Major components:*

- Buffaran stony loam, 8 to 30 percent slopes—40 percent
- Bombadil very stony loam, 8 to 30 percent slopes—30 percent
- Rock outcrop—20 percent

*Contrasting inclusions:*

- Inclusion 1: Jaybee very cobbly loam, 4 to 30 percent slopes—9 percent
- Inclusion 2: Verdico very stony sandy loam, 8 to 30 percent slopes—1 percent

**Characteristics of the Buffaran Soil**

*Classification:* Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Fan piedmont remnants superimposed on old lake terraces adjacent to hills

*Parent material:* Mixed alluvium

*Slope range:* 8 to 30 percent

*Elevation:* 4,300 to 5,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 2 inches

*Texture:* Stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches

*Texture:* Gravelly clay loam

*Structure:* Prismatic parting to angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral or mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 to 27 inches

*Texture:* Indurated hardpan

*Depth:* 27 to 60 inches

*Texture:* Cemented hardpan

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.9 to 2.6 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Bombadil Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Hills

*Parent material:* Residuum and colluvium derived from basic igneous rock

*Slope range:* 8 to 30 percent

*Elevation:* 4,300 to 5,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 10 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches

*Texture:* Loam

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 10 inches

*Texture:* Clay loam

*Structure:* Prismatic parting to subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 20 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 2.1 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Small peaks and rims of hills

*Kind of rock:* Basic igneous rock

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Convex summits and shoulders of hills

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Summits and shoulders of hills

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Buffaran and Bombadil soils—VIIIs, irrigated; Rock outcrop—VIIIIs

*Range site:* Buffaran soil—023XY006NV; Bombadil soil—023XY006NV; Rock outcrop—none; Inclusion 1—023XY047NV; Inclusion 2—023XY047NV

## **592—Buffaran-Corral association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmont remnants superimposed on old lake terraces

### **Composition**

*Major components:*

- Buffaran stony loam, 4 to 30 percent slopes—50 percent
- Corral very stony sandy loam, 4 to 15 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Bombadil very stony fine sandy loam, 2 to 4 percent slopes—6 percent
- Inclusion 2: Verdico very stony sandy loam, 2 to 8 percent slopes—4 percent
- Inclusion 3: Mazuma fine sandy loam, 2 to 8 percent slopes—3 percent
- Inclusion 4: Rock outcrop—2 percent

Inclusion 4—none

**610—Haybourne-Mottsville-Incy association**

**Map Unit Setting**

*Position on landscape:* Fan piedmont remnants, fan  
collars, fan aprons, and sand dunes

**Composition**

*Major components:*

- Haybourne loamy sand, 0 to 8 percent slopes—40  
percent
- Mottsville loamy coarse sand, 4 to 8 percent slopes—  
35 percent
- Incy sand, 4 to 30 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Torripsammentic Haploxerolls very stony  
loamy coarse sand, 8 to 15 percent slopes—5 percent
- Inclusion 2: Leviathan very stony sandy loam, 4 to 15  
percent slopes—4 percent
- Inclusion 3: Springmeyer sandy loam, 2 to 8 percent  
slopes—1 percent

**Characteristics of the Haybourne Soil**

*Classification:* Xerollic Camborthids, coarse-loamy,  
mixed, mesic

*Position on landscape:* Summits of fan piedmont  
remnants

*Parent material:* Granitic alluvium

*Slope range:* 0 to 8 percent

*Elevation:* 4,100 to 4,800 feet

*Dominant present vegetation:* Wyoming big sagebrush,  
spiny hopsage, needleandthread

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Depth:* 0 to 6 inches

*Texture:* Loamy sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 27 inches

*Texture:* Sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 27 to 60 inches

*Texture:* Stratified sandy loam and loamy sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60  
inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 4.8 to 7.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—  
5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very rapid  
*Available water capacity:* 3.0 to 4.2 inches  
*Water-supplying capacity:* 9 to 11 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—1  
*Hazard of erosion:* By water—slight; by wind—high  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Torripsammentic Haploxerolls, sandy-skeletal, mixed, mesic  
*Position on landscape:* Fan collars  
*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush, needleandthread, Indian ricegrass

##### **Inclusion 2**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* The upper fan piedmont remnants  
*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

##### **Inclusion 3**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic  
*Position on landscape:* Fan skirts adjacent to fan piedmont remnants

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Interpretive Groups**

*Capability classification:* Haybourne soil—IIIe, Mottsville soil—IVs, irrigated; Haybourne, Mottsville, and Incy soils—VIIs, nonirrigated

*Range site:* Haybourne soil—026XY020NV; Mottsville soil—026XY008NV; Incy soil—026XY014NV; Inclusion 1—026XY008NV; Inclusion 2—023XY020NV; Inclusion 3—023XY020NV

## **611—Haybourne-Zorravista-Fulstone association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts and sand dunes

### **Composition**

*Major components:*

- Haybourne sandy loam, 2 to 8 percent slopes—45 percent
- Zorravista fine sand, 4 to 15 percent slopes—25 percent
- Fulstone very stony loam, 2 to 8 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Natrargids loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Xeric Torriorthents gravelly sandy loam, 0 to 2 percent slopes—4 percent
- Inclusion 3: Aquic Torrifluvents silt loam, 0 to 2 percent slopes—4 percent
- Inclusion 4: Smaug very fine sandy loam, 2 to 8 percent slopes—2 percent

### **Characteristics of the Haybourne Soil**

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,200 to 5,200 feet

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 6 inches

*Texture:* Sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 25 inches

*Texture:* Sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 25 to 60 inches

*Texture:* Stratified sandy loam and loamy sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 4.8 to 7.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Zorravista Soil**

*Classification:* Xeric Torripsamments, mixed, mesic

*Position on landscape:* Sand dunes

*Parent material:* Sandy eolian material derived from mixed rocks

*Slope range:* 4 to 15 percent

*Elevation:* 4,200 to 5,200 feet

*Dominant present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 120 days

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Dun Glen Soil

*Classification:* Typic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* The lower fan skirts and lake plain terrace remnants

*Parent material:* Loess and volcanic ash over mixed alluvium

*Slope range:* 2 to 4 percent

*Elevation:* 4,100 to 4,300 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 3 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 10 inches

*Texture:* Very fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 10 to 60 inches  
*Texture:* Fine sandy loam, very fine sandy loam  
*Structure:* Massive  
*Consistence:* Slightly hard, friable  
*Reaction:* Strongly alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 6.8 to 8.0 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Inset fans  
*Distinctive present vegetation:* Wyoming big sagebrush, basin wildrye, arrowleaf balsamroot

#### Inclusion 2

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic  
*Position on landscape:* Low hills adjacent to the higher alluvial fans  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 3

*Classification:* Fluvaquents  
*Position on landscape:* Stream channels cut into alluvial fans and lake plain terrace remnants  
*Distinctive present vegetation:* Willow, cottonwood, basin big sagebrush

### Interpretive Groups

*Capability classification:* Haybourne soil—IIIe, Dun Glen soil—IIe, irrigated; Haybourne soil—VIc, Dun Glen soil—VIIc, nonirrigated

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Fan aprons and fan collars adjacent to alluvial fans  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Xeric Torriorthents, sandy, mixed, mesic  
*Position on landscape:* Fan aprons and beach bars  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, needleandthread

#### Inclusion 3

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic  
*Position on landscape:* The lower lake plain terraces adjacent to alluvial fans  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 4

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic, shallow  
*Position on landscape:* Side slopes of pediments adjacent to alluvial fans  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Interpretive Groups

*Capability subclass:* Haybourne soil—IIIe, irrigated, VIc, nonirrigated  
*Range site:* Haybourne soil—023XY038NV; Inclusion 1—023XY038NV; Inclusion 2—026XY020NV; Inclusion 3—023XY038NV; Inclusion 4—023XY047NV

## 620—Leviathan-Barnard association

### Map Unit Setting

*Position on landscape:* Fan piedmont remnants

### Composition

*Major components:*

- Leviathan very stony sandy loam, 4 to 15 percent slopes—55 percent
- Barnard very stony sandy clay loam, 4 to 8 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Springmeyer very stony sandy loam, 8 to 15 percent slopes—7 percent
- Inclusion 2: Mottsville sand, 4 to 8 percent slopes—3 percent

### Characteristics of the Leviathan Soil

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Summits of fan piedmont remnants  
*Parent material:* Mixed alluvium derived dominantly from granite  
*Slope range:* 4 to 15 percent  
*Elevation:* 4,400 to 5,000 feet  
*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 15 percent

*Depth:* 0 to 8 inches  
*Texture:* Very stony sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Slightly acid  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 60 inches  
*Texture:* Very gravelly sandy clay loam  
*Structure:* Subangular blocky or massive  
*Consistence:* Hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 4.3 to 5.5 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Barnard Soil**

*Classification:* Aridic Durixerolls, fine, montmorillonitic, mesic  
*Position on landscape:* Summits of fan piedmont remnants at the higher elevations  
*Parent material:* Mixed alluvium  
*Slope range:* 4 to 8 percent  
*Elevation:* 4,400 to 5,000 feet  
*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 10 percent; pebbles, 15 percent  
*Depth:* 0 to 15 inches  
*Texture:* Very stony sandy clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2  
*Depth:* 15 to 26 inches  
*Texture:* Clay  
*Structure:* Subangular blocky

*Consistence:* Very hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 26 inches  
*Texture:* Indurated hardpan

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to a hardpan:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 3.4 to 6.8 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic  
*Position on landscape:* Fan aprons and inset fans  
*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

##### **Inclusion 2**

*Classification:* Torripsammentic Haploxerolls, sandy, mixed, mesic  
*Position on landscape:* Fan aprons  
*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush, needleandthread, Indian ricegrass

#### **Interpretive Groups**

*Capability classification:* Leviathan and Barnard soils—VIIIs, nonirrigated  
*Range site:* Leviathan soil—023XY020NV; Barnard soil—023XY020NV; Inclusion 1—023XY020NV; Inclusion 2—026XY008NV

#### **621—Leviathan-Springmeyer-Haybourne association**

*Structure:* Subangular blocky or massive

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.3 to 5.5 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Springmeyer Soil

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,400 to 5,600 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

#### Typical Profile

*Surface cover:* Stones and boulders, 15 percent; cobbles, 5 percent; pebbles, 5 percent

*Depth:* 0 to 7 inches

*Texture:* Very stony sandy loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 7 to 34 inches

*Texture:* Sandy clay loam

*Structure:* Prismatic, subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 34 to 60 inches

*Texture:* Gravelly sandy clay loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 6.3 to 8.0 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Haybourne Soil

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* Fan aprons

*Parent material:* Mixed alluvium

*Slope range:* 4 to 8 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, needleandthread

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Depth:* 0 to 6 inches

*Texture:* Loamy sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 25 inches

*Texture:* Sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 25 to 60 inches

*Texture:* Stratified sandy loam and loamy sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 4.8 to 7.0 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Cumulic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces cut into fan piedmont remnants

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### Inclusion 2

*Classification:* Aridic Durixerolls, fine, montmorillonitic, mesic

*Position on landscape:* The highest fan piedmont remnants

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Inclusion 3

*Classification:* Aridic Argixerolls, loamy, mixed, mesic, shallow

*Position on landscape:* Hills adjacent to fan piedmont remnants

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Inclusion 4

*Classification:* Cumulic Haplaquolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces cut into fan piedmont remnants adjacent to seeps

*Distinctive present vegetation:* Nevada bluegrass, meadow barley

### Interpretive Groups

*Capability classification:* Haybourne soil—IIIe, irrigated; Leviathan, Springmeyer, and Haybourne soils—VIIs, nonirrigated

*Range site:* Leviathan soil—023XY020NV; Springmeyer soil—023XY020NV; Haybourne soil—026XY020NV; Inclusion 1—023XY009NV; Inclusion 2—023XY020NV; Inclusion 3—023XY020NV; Inclusion 4—026XY003NV

## 622—Leviathan very gravelly loam, 2 to 8 percent slopes

### **Map Unit Setting**

*Position on landscape:* Alluvial fans

### **Composition**

*Major component:*

- Leviathan very gravelly loam, 2 to 8 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents stony sandy loam, 2 to 4 percent slopes—5 percent
- Inclusion 2: Abruptic Aridic Argixerolls very gravelly sandy loam, 2 to 8 percent slopes—5 percent

### **Characteristics of the Leviathan Soil**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,600 to 5,600 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 30 percent

*Depth:* 0 to 8 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 60 inches

*Texture:* Very gravelly sandy clay loam

*Structure:* Subangular blocky or massive

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.3 to 5.5 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Channels cut into alluvial fans

*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

#### **Inclusion 2**

*Classification:* Abruptic Aridic Argixerolls, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits of alluvial fan remnants

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Interpretive Groups**

*Capability classification:* Leviathan soil—IVs, irrigated, VIIs, nonirrigated

*Range site:* Leviathan soil—023XY020NV; Inclusion 1—027XY029NV; Inclusion 2—023XY037NV

## 630—Chappuis sandy loam

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major component:*

- Chappuis sandy loam, 0 to 2 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Natrargids loam, 0 to 2 percent slopes—5 percent
- Inclusion 2: Chappuis silty clay loam, 0 to 2 percent slopes—5 percent

### **Characteristics of the Chappuis Soil**

*Classification:* Xerollic Natrargids, fine, montmorillonitic, mesic

*Position on landscape:* Lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,980 to 4,050 feet  
*Dominant present vegetation:* Basin big sagebrush,  
 black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 50 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 3 inches  
*Texture:* Sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 3 to 15 inches  
*Texture:* Silty clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Hard, very friable  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* 2 to 8 mmhos per cm  
*Sodicity:* SAR 20 to 50

*Depth:* 15 to 45 inches  
*Texture:* Silty clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* 2 to 8 mmhos per cm  
*Sodicity:* SAR more than 50

*Depth:* 45 to 60 inches  
*Texture:* Silt loam  
*Structure:* Angular blocky  
*Consistence:* Hard, very firm  
*Reaction:* Moderately alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 50

#### **Soil and Water Features**

*Depth to a seasonal high water table:* 48 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 4.5 to 5.5 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—  
 1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Natrargids, fine-loamy, mixed,  
 mesic  
*Position on landscape:* The lowest lake plain terraces  
*Distinctive present vegetation:* Shadscale, black  
 greasewood, bud sagebrush

##### **Inclusion 2**

*Classification:* Xerollic Natrargids, fine, montmorillonitic,  
 mesic  
*Position on landscape:* The lower lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush,  
 black greasewood, basin wildrye

#### **Interpretive Groups**

*Capability classification:* Chappuis soil—VIIIs,  
 nonirrigated  
*Range site:* Chappuis soil—024XY006NV; Inclusion 1—  
 024XY003NV; Inclusion 2—024XY006NV

## **702—Graufels-Glenbrook association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

#### **Composition**

*Major components:*

- Graufels bouldery sand, 15 to 50 percent slopes—50 percent
- Glenbrook very stony loamy coarse sand, 15 to 50 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Sumine very stony loam, 15 to 50 percent slopes—5 percent
- Inclusion 3: Entic Haploxerolls very bouldery loamy coarse sand, 30 to 75 percent slopes—5 percent

#### **Characteristics of the Graufels Soil**

*Classification:* Torripsammentic Haploxerolls, sandy,  
 mixed, mesic  
*Position on landscape:* North- and east-facing side  
 slopes of mountains  
*Parent material:* Residuum and colluvium derived from  
 granite  
*Slope range:* 15 to 50 percent  
*Elevation:* 5,400 to 6,800 feet  
*Dominant present vegetation:* Mountain big sagebrush,  
 bluebunch wheatgrass, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 90 days

**Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; pebbles, 15 percent

*Depth:* 0 to 11 inches

*Texture:* Bouldery sand

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 11 to 35 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 35 to 60 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 1.5 to 3.0 inches

*Water-supplying capacity:* 11 to 13 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Characteristics of the Glenbrook Soil**

*Classification:* Xeric Torripsamments, mixed, mesic, shallow

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 15 to 50 percent

*Elevation:* 5,400 to 6,800 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 5 percent; pebbles, 15 percent

*Depth:* 0 to 8 inches

*Texture:* Very stony loamy coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 19 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 19 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 0.6 to 1.2 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

**Inclusion 2**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing side slopes of mountains, adjacent to volcanic rock outcrop

*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

### **Inclusion 3**

*Classification:* Entic Haploxerolls, sandy, mixed, frigid

*Position on landscape:* Concave north-facing back slopes of mountains at the higher elevations

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

### **Interpretive Groups**

*Capability classification:* Graufels and Glenbrook soils—VIIIs, nonirrigated

*Range site:* Graufels soil—023XY039NV; Glenbrook soil—023XY039NV; Inclusion 1—none; Inclusion 2—023XY016NV; Inclusion 3—023XY041NV

## **710—Thulepah-Hutchley association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Thulepah very stony loam, 8 to 30 percent slopes—45 percent
- Hutchley very cobbly sandy loam, 4 to 30 percent slopes—40 percent

*Contrasting inclusions:*

- Inclusion 1: Newlands very stony loam, 30 to 50 percent slopes—6 percent
- Inclusion 2: Rock outcrop—3 percent
- Inclusion 3: Argic Cryoborolls loam, 4 to 15 percent slopes—3 percent
- Inclusion 4: Aridic Argixerolls very gravelly loam, 4 to 15 percent slopes—3 percent

### **Characteristics of the Thulepah Soil**

*Classification:* Argic Pachic Cryoborolls, fine-loamy, mixed

*Position on landscape:* Side slopes of mountains

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 8 to 30 percent

*Elevation:* 7,000 to 8,000 feet

*Dominant present vegetation:* Mountain big sagebrush, snowberry, mountain brome

### **Climatic Data**

*Average annual precipitation:* About 16 inches

*Average annual air temperature:* About 41 degrees F

*Frost-free period:* About 50 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent

*Depth:* 0 to 16 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 to 42 inches

*Texture:* Gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 42 to 60 inches

*Texture:* Gravelly clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 8.7 to 10.4 inches

*Water-supplying capacity:* 15 to 17 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—moderate

*Potential for frost action:* Moderate

### **Characteristics of the Hutchley Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Crests of mountains

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 4 to 30 percent

*Elevation:* 7,000 to 8,000 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### **Climatic Data**

*Average annual precipitation:* About 16 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free period:* About 65 days

**Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 6 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 14 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

**Contrasting Inclusions****Inclusion 1**

*Classification:* Agric Cryoborolls, fine-loamy, mixed

*Position on landscape:* Concave, north-facing back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass, basin wildrye

**Inclusion 2**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

**Inclusion 3**

*Classification:* Argic Cryoborolls, fine-loamy, mixed

*Position on landscape:* Concave side slopes of mountains

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

**Inclusion 4**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Concave crests and shoulders of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

**Interpretive Groups**

*Capability classification:* Thulepah and Hutchley soils—VIIIs, nonirrigated

*Range site:* Thulepah soil—023XY019NV; Hutchley soil—023XY008NV; Inclusion 1—023XY007NV; Inclusion 2—none; Inclusion 3—023XY028NV; Inclusion 4—023XY017NV

**711—Thulepah-Hutchley-Rock outcrop association****Map Unit Setting**

*Position on landscape:* Mountains

**Composition**

*Major components:*

- Thulepah very stony loam, 50 to 75 percent slopes—40 percent
  - Hutchley very gravelly loam, 8 to 30 percent slopes—25 percent
  - Rock outcrop—20 percent
- Contrasting inclusions:*
- Inclusion 1: Sumine very stony loam, 30 to 75 percent slopes—5 percent
  - Inclusion 2: Terca very stony loam, 30 to 75 percent slopes—5 percent
  - Inclusion 3: Aridic Argixerolls very stony loam, 15 to 30 percent slopes—4 percent
  - Inclusion 4: Argic Cryoborolls loam, 4 to 8 percent slopes—1 percent

**Characteristics of the Thulepah Soil**

*Classification:* Argic Pachic Cryoborolls, fine-loamy, mixed

*Position on landscape:* North-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 50 to 75 percent

*Elevation:* 5,400 to 7,200 feet

*Dominant present vegetation:* Idaho fescue, mountain big sagebrush

**Climatic Data**

*Average annual precipitation:* About 16 inches

*Average annual air temperature:* About 41 degrees F  
*Frost-free period:* About 50 days

### Typical Profile

*Surface cover:* Stones and boulders, 10 percent;  
 cobbles, 10 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 28 inches

*Texture:* Gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 28 to 60 inches

*Texture:* Gravelly clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 8.7 to 10.4 inches

*Water-supplying capacity:* 15 to 17 inches

*Runoff:* Very rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—moderate

*Potential for frost action:* Moderate

### Characteristics of the Hutchley Soil

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Crests of mountains

*Parent material:* Residuum and colluvium derived from andesite or basalt

*Slope range:* 8 to 30 percent

*Elevation:* 5,400 to 7,200 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### Climatic Data

*Average annual precipitation:* About 16 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free period:* About 65 days

### Typical Profile

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 6 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 15 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Rock Outcrop

*Position on landscape:* Peaks and ridges of mountains

*Kind of rock:* Andesite or basalt

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* South-facing back slopes of mountains

*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

#### **Inclusion 2**

*Classification:* Lithic Argixerolls, loamy, mixed, mesic

*Position on landscape:* The lower, south-facing back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 3**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Shoulders of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

#### **Inclusion 4**

*Classification:* Argic Cryoborolls, fine-loamy, mixed

*Position on landscape:* Concave side slopes of mountains

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

### **Interpretive Groups**

*Capability classification:* Thulepah and Hutchley soils—VIIs, nonirrigated; Rock outcrop—VIIs

*Range site:* Thulepah soil—023XY054NV; Hutchley soil—023XY008NV; Rock outcrop—none; Inclusion 1—023XY016NV; Inclusion 2—023XY039NV; Inclusion 3—023XY017NV; Inclusion 4—023XY028NV

## **721—Softscrabble-Sumine-Hutchley association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Softscrabble very stony loam, 15 to 50 percent slopes—40 percent
- Sumine very stony loam, 15 to 50 percent slopes—30 percent
- Hutchley very cobbly sandy loam, 4 to 30 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Aridic Argixerolls very cobbly sandy loam, 4 to 30 percent slopes—4 percent
- Inclusion 3: Thulepah very stony loam, 8 to 15 percent slopes—3 percent
- Inclusion 4: Bucklake very stony loam, 15 to 30 percent slopes—2 percent

### **Characteristics of the Softscrabble Soil**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North- and east-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 15 to 50 percent

*Elevation:* 6,000 to 8,000 feet

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 65 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 20 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 20 to 32 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Soft, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 32 to 61 inches

*Texture:* Gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 61 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 60 to 80 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 7.2 to 8.7 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Sumine Soil**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* South- and west-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from welded tuff, andesite, or basalt

*Slope range:* 15 to 50 percent

*Elevation:* 6,000 to 8,000 feet

*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 85 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 28 inches

*Texture:* Very gravelly loam, very cobbly clay loam

*Structure:* Angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 28 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.3 to 4.6 inches

*Water-supplying capacity:* 12 to 14 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Hutchley Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Crests and shoulders of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 4 to 30 percent

*Elevation:* 6,000 to 8,000 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 70 days

### **Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Very cobbly sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 14 inches

*Texture:* Very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Slightly concave or smooth crests and shoulders of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

#### **Inclusion 3**

*Classification:* Argic Pachic Cryoborolls, fine-loamy, mixed

*Position on landscape:* North-facing side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, snowberry, mountain brome

#### **Inclusion 4**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* The lower, south-facing side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Very stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 21 inches

*Texture:* Very gravelly loam, very cobbly clay loam

*Structure:* Angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 21 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.3 to 4.6 inches

*Water-supplying capacity:* 12 to 14 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Prunie Soil**

*Classification:* Aridic Argixerolls, fine, montmorillonitic, frigid

*Position on landscape:* Concave side slopes of plateaus

*Parent material:* Residuum derived from basalt or andesite

*Slope range:* 4 to 15 percent  
*Elevation:* 6,000 to 7,700 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

#### **Climatic Data**

*Average annual precipitation:* About 14 inches  
*Average annual air temperature:* About 45 degrees F  
*Frost-free period:* About 70 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 15 percent

*Depth:* 0 to 10 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 31 inches  
*Texture:* Gravelly clay  
*Structure:* Prismatic  
*Consistence:* Hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 31 to 45 inches  
*Texture:* Clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 45 to 52 inches  
*Texture:* Weathered bedrock

*Depth:* 52 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 40 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 5.1 to 7.7 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—3; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Rims and side slopes of plateaus  
*Distinctive present vegetation:* None

##### **Inclusion 2**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* Convex crests of plateaus  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

##### **Inclusion 3**

*Classification:* Argiaquic Cryoborolls, fine, montmorillonitic  
*Position on landscape:* Bottoms of interplateau basins  
*Distinctive present vegetation:* Nevada bluegrass, meadow barley

#### **Interpretive Groups**

*Capability classification:* Softscrabble, Sumine, and Prunie soils—VIIIs, nonirrigated  
*Range site:* Softscrabble soil—023XY041NV; Sumine soil—023XY016NV; Prunie soil—023XY017NV; Inclusion 1—none; Inclusion 2—023XY008NV; Inclusion 3—026XY003NV

## **726—Softscrabble-Dosie-Devada association**

#### **Map Unit Setting**

*Position on landscape:* Plateaus

#### **Composition**

*Major components:*

- Softscrabble very stony loam, 15 to 50 percent slopes—40 percent
- Dosie extremely stony loam, 15 to 50 percent slopes—30 percent
- Devada very stony loam, 4 to 15 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids very stony loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Rubble land—5 percent
- Inclusion 3: Lithic Xerollic Camborthids extremely stony clay, 2 to 4 percent slopes—3 percent
- Inclusion 4: Cumulic Haplaquolls loam, 0 to 4 percent slopes—2 percent

#### **Characteristics of the Softscrabble Soil**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* North-facing side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 65 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 4 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 20 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 20 to 32 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 32 to 61 inches

*Texture:* Gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 61 inches

*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 60 to 80 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 7.2 to 8.7 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

#### **Characteristics of the Dosie Soil**

*Classification:* Pachic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* South-facing side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 5,400 to 6,200 feet

*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 85 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 30 percent; cobbles, 15 percent; pebbles, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Extremely stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 41 inches

*Texture:* Very gravelly clay loam, very gravelly clay

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 41 inches

*Texture:* Unweathered bedrock

*Depth to a seasonal high water table:* More than 60 inches

#### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 4.0 to 5.4 inches

*Water-supplying capacity:* 11 to 13 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### **Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic  
*Position on landscape:* Summits and shoulders of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 4 to 15 percent  
*Elevation:* 5,400 to 6,200 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 45 degrees F  
*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 15 percent; pebbles, 15 percent

*Depth:* 0 to 4 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches  
*Texture:* Clay  
*Structure:* Prismatic  
*Consistence:* Very hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 13 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 12 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.5 to 2.6 inches  
*Water-supplying capacity:* 9 to 11 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* Eroded, convex summits of plateaus  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Hooker balsamroot

#### **Inclusion 2**

*Position on landscape:* Side slopes below summits of plateaus  
*Distinctive present vegetation:* None

#### **Inclusion 3**

*Classification:* Lithic Xerollic Camborthids, clayey, montmorillonitic, mesic  
*Position on landscape:* Convex summits of plateaus  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Utah juniper

#### **Inclusion 4**

*Classification:* Cumulic Haplaquolls, fine-loamy, mixed, frigid  
*Position on landscape:* Stream terraces  
*Distinctive present vegetation:* Sedge, rush

### **Interpretive Groups**

*Capability classification:* Softscrabble, Dosie, and Devada soils—VIIIs, nonirrigated  
*Range site:* Softscrabble soil—023XY007NV; Dosie soil—023XY016NV; Devada soil—023XY031NV; Inclusion 1—023XY021NV; Inclusion 2—none; Inclusion 3—023XY035NV; Inclusion 4—023XY013NV

## **727—Softscrabble-Hart Camp association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Softscrabble stony loam, 8 to 30 percent slopes—45 percent
- Hart Camp very stony loam, 8 to 30 percent slopes—40 percent

*Contrasting inclusions:*

- Inclusion 1: Devada very stony loam, 4 to 15 percent slopes—5 percent
- Inclusion 2: Cumulic Cryaquolls loam, 2 to 4 percent slopes—5 percent

- Inclusion 3: Dose extremely stony loam, 15 to 50 percent slopes—3 percent
- Inclusion 4: Rock outcrop—2 percent

### **Characteristics of the Softscrabble Soil**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North- and east-facing, concave side slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 8 to 30 percent

*Elevation:* 5,700 to 6,800 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

### **Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free period:* About 65 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 15 percent

*Depth:* 0 to 20 inches

*Texture:* Stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 20 to 32 inches

*Texture:* Very cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 32 to 61 inches

*Texture:* Gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 61 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 60 to 80 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Structure:* Subangular blocky  
*Consistence:* Slightly hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 61 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 60 to 80 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.2 to 8.7 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Dosie Soil**

*Classification:* Pachic Argixerolls, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* South- and west-facing back slopes of mountains  
*Parent material:* Residuum and colluvium derived from basalt or andesite  
*Slope range:* 30 to 50 percent  
*Elevation:* 5,500 to 7,500 feet  
*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 15 percent  
*Depth:* 0 to 5 inches  
*Texture:* Very stony loam

*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 5 to 41 inches  
*Texture:* Very gravelly clay loam, very gravelly clay  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 41 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 40 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 4.0 to 5.4 inches  
*Water-supplying capacity:* 11 to 13 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Hutchley Soil**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* Crests and shoulders of mountains  
*Parent material:* Residuum and colluvium derived from basalt or andesite  
*Slope range:* 4 to 30 percent  
*Elevation:* 5,500 to 7,500 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 14 inches  
*Average annual air temperature:* About 45 degrees F  
*Frost-free period:* About 65 days

#### **Typical Profile**

*Surface cover:* Cobbles, 25 percent; pebbles, 20 percent  
*Depth:* 0 to 6 inches  
*Texture:* Very cobbly sandy loam  
*Structure:* Subangular blocky

*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 15 inches  
*Texture:* Very gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 15 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 0.6 to 1.0 inch  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

#### Inclusion 2

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* The lower, convex crests of mountains

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### Inclusion 3

*Classification:* Cumulic Cryoborolls

*Position on landscape:* Stream terraces adjacent to toe slopes of mountains

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

#### Inclusion 4

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing, convex side slopes of mountains

*Distinctive present vegetation:* Curlleaf mountainmahogany, mountain big sagebrush, snowberry, bluebunch wheatgrass

### Interpretive Groups

*Capability classification:* Softscrabble, Dosie, and Hutchley soils—VIIs, nonirrigated

*Range site:* Softscrabble soil—023XY007NV; Dosie soil—023XY016NV; Hutchley soil—023XY008NV; Inclusion 1—none; Inclusion 2—023XY037NV; Inclusion 3—023XY028NV; Inclusion 4—023XY069NV

## 730—Arzo-Indiano-Barnard association

### Map Unit Setting

*Position on landscape:* Hills, pediments, and alluvial fan remnants

### Composition

*Major components:*

- Arzo very stony loam, 8 to 30 percent slopes—35 percent
- Indiano stony fine sandy loam, 15 to 30 percent slopes—30 percent
- Barnard stony sandy loam, 2 to 8 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Terca very stony loam, 15 to 50 percent slopes—5 percent
- Inclusion 2: Springmeyer very stony sandy loam, 2 to 8 percent slopes—4 percent
- Inclusion 3: Rock outcrop—4 percent
- Inclusion 4: Cumulic Haplaquolls loam, 4 to 8 percent slopes—2 percent

### Characteristics of the Arzo Soil

*Classification:* Aridic Calcic Argixerolls, fine, montmorillonitic, mesic

*Position on landscape:* Concave pediments

*Parent material:* Alluvium and colluvium derived from basalt

*Slope range:* 8 to 30 percent

*Elevation:* 5,100 to 6,100 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 10 percent; pebbles, 15 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Platy parting to granular

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 25 inches

*Texture:* Clay loam or clay

*Structure:* Prismatic

*Consistence:* Very hard, very firm

*Reaction:* Neutral or mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 25 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.7 to 5.4 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Indiano Soil**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Side slopes of hills and pediments

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 30 percent

*Elevation:* 5,100 to 6,100 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; pebbles, 15 percent

*Depth:* 0 to 8 inches

*Texture:* Stony fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Slightly acid

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 21 inches

*Texture:* Gravelly sandy clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 21 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.7 to 5.5 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Barnard Soil**

*Classification:* Aridic Durixerolls, fine, montmorillonitic, mesic

*Position on landscape:* Alluvial fan remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 5,100 to 6,100 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; pebbles, 10 percent

*Depth:* 0 to 9 inches

*Texture:* Stony sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 9 to 23 inches

*Texture:* Clay

*Structure:* Subangular blocky

*Consistence:* Very hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 23 inches

*Texture:* Indurated hardpan

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.4 to 6.8 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Lithic Argixerolls, loamy, mixed, mesic

*Position on landscape:* South- and west-facing side slopes of hills and pediments

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

**Inclusion 2**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Inset fans adjacent to toe slopes of hills

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

**Inclusion 3**

*Position on landscape:* Hills and pediments

*Distinctive present vegetation:* None

**Inclusion 4**

*Classification:* Cumulic Haplaquolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces adjacent to toe slopes of hills

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

**Interpretive Groups**

*Capability classification:* Arzo and Barnard soils—VIIs, Indiano soil—VI, nonirrigated

*Range site:* Arzo soil—023XY020NV; Indiano soil—023XY039NV; Barnard soil—023XY020NV; Inclusion 1—023XY039NV; Inclusion 2—023XY020NV; Inclusion 3—none; Inclusion 4—023XY009NV

**750—Gitakup-Tresed-Ragtown association****Map Unit Setting**

*Position on landscape:* Lake plain terraces

**Composition**

*Major components:*

- Gitakup silty clay loam, 0 to 2 percent slopes—35 percent
- Tresed loam, 0 to 2 percent slopes—30 percent
- Ragtown silty clay loam, 0 to 2 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Playas—9 percent
- Inclusion 2: Isoldé fine sand, 2 to 85 percent slopes—4 percent
- Inclusion 3: Cumulic Haplaquolls loam, 0 to 4 percent slopes—2 percent

**Characteristics of the Gitakup Soil**

*Classification:* Natric Camborthids, fine-silty, mixed, mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Silty alluvium and lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,975 to 4,000 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 2 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 2 to 11 inches  
*Texture:* Silty clay  
*Structure:* Prismatic  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 45 to 68

*Depth:* 11 to 29 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 23 to 45

*Depth:* 29 to 60 inches  
*Texture:* Silty clay loam  
*Structure:* Angular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.3 to 8.5 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Characteristics of the Tressed Soil**

*Classification:* Typic Torriorthents, clayey over loamy, montmorillonitic (calcareous), mesic  
*Position on landscape:* The middle lake plain terraces  
*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent  
*Elevation:* 3,975 to 4,000 feet  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

**Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 4 inches  
*Texture:* Loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 4 to 16 inches  
*Texture:* Silty clay, clay loam  
*Structure:* Prismatic or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 68

*Depth:* 16 to 60 inches  
*Texture:* Loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR 13 to 68

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Characteristics of the Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,975 to 4,000 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 23 to 68

*Depth:* 10 to 23 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Basin floors adjacent to the lowest lake plain terraces  
*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces  
*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### **Inclusion 3**

*Classification:* Cumulic Haplaquolls, fine-silty, mixed, mesic  
*Position on landscape:* Stream terraces cut into lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Interpretive Groups**

*Capability classification:* Gitakup, Tressed, and Ragtown—VIIIs, nonirrigated  
*Range site:* Gitakup soil—024XY002NV; Tressed soil—024XY003NV; Ragtown soil—027XY025NV; Inclusion 1—none; Inclusion 2—027XY016NV; Inclusion 3—023XY009NV

## **760—Ganaflan-Smaug-Trocken association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces and alluvial fans

### **Composition**

*Major components:*

- Ganaflan loam, 2 to 8 percent slopes—40 percent
  - Smaug very fine sandy loam, 2 to 8 percent slopes—30 percent
  - Trocken gravelly sandy loam, 4 to 8 percent slopes—15 percent
- Contrasting inclusions:*
- Inclusion 1: Veta gravelly fine sandy loam, 2 to 4 percent slopes—8 percent
  - Inclusion 2: Hawsley loamy fine sand, 2 to 8 percent slopes—5 percent
  - Inclusion 3: Badland, 4 to 30 percent slopes—1 percent
  - Inclusion 4: Rock outcrop—1 percent

### **Characteristics of the Ganaflan Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces  
*Parent material:* Mixed lacustrine deposits and residuum derived from tufa  
*Slope range:* 2 to 8 percent  
*Elevation:* 3,900 to 4,300 feet  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 4 inches  
*Texture:* Loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 4 to 32 inches  
*Texture:* Gravelly loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Strongly alkaline or very strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 32 to 48 inches  
*Texture:* Unweathered bedrock

*Depth:* 48 to 60 inches  
*Texture:* Stratified sand and gravelly sand  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 4 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.5 to 3.5 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—2; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—moderate  
*Potential for frost action:* Low

#### **Characteristics of the Smaug Soil**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic  
*Position on landscape:* Lake plain terraces  
*Parent material:* Silty lacustrine materials  
*Slope range:* 2 to 8 percent  
*Elevation:* 3,900 to 4,300 feet  
*Dominant present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 10 inches  
*Texture:* Very fine sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 10 to 60 inches  
*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 8.3 to 9.5 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—moderate  
*Potential for frost action:* Low

#### **Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Alluvial fans adjacent to the upper lake plain terraces

*Parent material:* Mixed alluvium

*Slope range:* 4 to 8 percent

*Elevation:* 3,900 to 4,300 feet

*Dominant present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches

*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* The upper lake plain terraces and alluvial fans

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on lake plain terraces

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

##### **Inclusion 3**

*Position on landscape:* Eroded lake plain terraces

*Distinctive present vegetation:* None

##### **Inclusion 4**

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Ganaflan, Smaug, and Trocken soils—VIIs, nonirrigated

*Range site:* Ganaflan soil—024XY002NV; Smaug soil—024XY004NV; Trocken soil—024XY014NV; Inclusion 1—023XY038NV; Inclusion 2—027XY009NV; Inclusion 3—none; Inclusion 4—none

## **770—Tresed-Gitakup-Playas complex**

#### **Map Unit Setting**

*Position on landscape:* Basin floors

#### **Composition**

*Major components:*

- Tresed loam, 0 to 2 percent slopes—40 percent
- Gitakup silty clay loam, 0 to 2 percent slopes—30 percent
- Playas—20 percent

*Contrasting inclusions:*

- Inclusion 1: Isolde fine sand, 4 to 8 percent slopes—4 percent
- Inclusion 2: Hawsley loamy sand, 4 to 8 percent slopes—2 percent
- Inclusion 3: Chuckles loam, 0 to 2 percent slopes—2 percent
- Inclusion 4: Fluventic Haploxerolls loam, 0 to 4 percent slopes—2 percent

#### **Characteristics of the Tresed Soil**

*Classification:* Typic Torriorthents, clayey over loamy, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,975 to 4,000 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

**Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 10 inches  
*Texture:* Loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 10 to 25 inches  
*Texture:* Silty clay, clay loam  
*Structure:* Prismatic or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 68

*Depth:* 25 to 60 inches  
*Texture:* Loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR 13 to 68

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Characteristics of the Gitakup Soil**

*Classification:* Natric Camborthids, fine-silty, mixed, mesic  
*Position on landscape:* The higher lake plain terraces  
*Parent material:* Silty alluvium and lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,975 to 4,000 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 2 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 2 to 11 inches  
*Texture:* Silty clay  
*Structure:* Prismatic  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 45 to 68

*Depth:* 11 to 29 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 23 to 45

*Depth:* 29 to 60 inches  
*Texture:* Silty clay loam  
*Structure:* Angular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.3 to 8.5 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Characteristics of the Playas**

*Position on landscape:* The lowest part of basin floors  
*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces

*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Sand sheets superimposed on lake plain terraces

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Inclusion 3**

*Classification:* Typic Camborthids, fine-silty, mixed, mesic

*Position on landscape:* The middle lake plain terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Inclusion 4**

*Classification:* Fluventic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces cut into lake plain terraces

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Interpretive Groups**

*Capability classification:* Trocken and Gitakup soils—VIIIs, nonirrigated; Playas—VIIIw

*Range site:* Tressed soil—024XY003NV; Gitakup soil—024XY002NV; Playas—none; Inclusion 1—027XY016NV; Inclusion 2—027XY009NV; Inclusion 3—024XY003NV; Inclusion 4—023XY009NV

## **780—Chuckles-Playas complex**

### **Map Unit Setting**

*Position on landscape:* Basin floors

### **Composition**

*Major components:*

- Chuckles loam, 0 to 2 percent slopes—65 percent
- Playas—20 percent

*Contrasting inclusions:*

- Inclusion 1: Vertic Torriorthents clay, 0 to 2 percent slopes—8 percent

- Inclusion 2: Fluventic Haploxerolls loam, 2 to 4 percent slopes—3 percent
- Inclusion 3: Swingler loam, 0 to 2 percent slopes—3 percent
- Inclusion 4: Isolde fine sand, 4 to 15 percent slopes—1 percent

### **Characteristics of the Chuckles Soil**

*Classification:* Typic Camborthids, fine-silty, mixed, mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Loamy alluvium over loamy lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,980 to 4,000 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 6 inches

*Texture:* Loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR 13 to 45

*Depth:* 6 to 15 inches

*Texture:* Silt loam

*Structure:* Prismatic

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 45

*Depth:* 15 to 34 inches

*Texture:* Silt loam, loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR 13 to 45

*Depth:* 34 to 60 inches

*Texture:* Silty clay loam

*Structure:* Massive

*Consistence:* Extremely hard, brittle

*Reaction:* Moderately alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR 13 to 45

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow

## 790—Galeppi-Barnard association

### Map Unit Setting

*Position on landscape:* Summits of fan piedmonts, fan aprons, and inset fan remnants

### Composition

*Major components:*

- Galeppi stony sandy loam, 4 to 15 percent slopes—55 percent
- Barnard stony sandy loam, 2 to 8 percent slopes—30 percent

*Contrasting inclusions:*

- Inclusion 1: Leviathan very stony sandy loam, 4 to 8 percent slopes—7 percent
- Inclusion 2: Aridic Argixerolls stony loam, 4 to 30 percent slopes—6 percent
- Inclusion 3: Aridic Durixerolls stony loam, 2 to 8 percent slopes—2 percent

### Characteristics of the Galeppi Soil

*Classification:* Durargidic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Fan aprons and inset fan remnants

*Parent material:* Mixed alluvium

*Slope range:* 4 to 15 percent

*Elevation:* 5,200 to 5,800 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 3 percent; cobbles, 5 percent; pebbles, 25 percent

*Depth:* 0 to 9 inches

*Texture:* Stony sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Slightly acid

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 9 to 27 inches

*Texture:* Cobbly sandy clay loam, cobbly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 27 to 60 inches

*Texture:* Cobbly sandy loam

*Structure:* Massive

*Consistence:* Hard, brittle

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.7 to 6.5 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Barnard Soil

*Classification:* Aridic Durixerolls, fine, montmorillonitic, mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 5,200 to 5,800 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 2 percent; pebbles, 10 percent

*Depth:* 0 to 15 inches

*Texture:* Stony sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 to 26 inches  
*Texture:* Clay  
*Structure:* Subangular blocky  
*Consistence:* Very hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 26 inches  
*Texture:* Indurated hardpan

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to a hardpan:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 3.4 to 6.8 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Fan aprons  
*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### Inclusion 2

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic, shallow  
*Position on landscape:* Low hills adjacent to the higher fan piedmont remnants  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### Inclusion 3

*Classification:* Aridic Durixerolls, clayey, montmorillonitic, mesic, shallow  
*Position on landscape:* Convex summits of fan piedmont remnants  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

### Interpretive Groups

*Capability classification:* Galeppi soil—VIs, Barnard soil—VIIIs, nonirrigated

*Range site:* Galeppi and Barnard soils—023XY020NV; Inclusion 1—023XY020NV; Inclusion 2—023XY039NV; Inclusion 3—023XY031NV

## 800—Boulder Lake silty clay

### Map Unit Setting

*Position on landscape:* Interplateau basins

### Composition

*Major component:*

- Boulder Lake silty clay, 0 to 2 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Boulder Lake silt loam, 0 to 2 percent slopes—8 percent
- Inclusion 2: Boulder Lake silty clay, 0 to 2 percent slopes—4 percent
- Inclusion 3: Fluventic Haploxerolls loam, 0 to 2 percent slopes—2 percent
- Inclusion 4: Cumulic Haplaquolls clay loam, 0 to 2 percent slopes—1 percent

### Characteristics of the Boulder Lake Soil

*Classification:* Aquic Chromoxererts, fine, montmorillonitic, frigid

*Position on landscape:* Interplateau basins

*Parent material:* Clayey lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 5,620 to 5,680 feet

*Dominant present vegetation:* Silver sagebrush, Nevada bluegrass, Baltic rush

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free period:* About 70 days

### Typical Profile

*Depth:* 0 to 1 inch

*Texture:* Silty clay

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 60 inches

*Texture:* Clay or silty clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, very firm

*Reaction:* Mildly alkaline or moderately alkaline

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

### Soil and Water Features

*Seasonal high water table:* 12 inches above to 18 inches below the surface  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 10.6 to 12.0 inches  
*Water-supplying capacity:* 8 to 16 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aquic Chromoxererts, fine, montmorillonitic, frigid  
*Position on landscape:* The slightly higher areas of interplateau basins  
*Distinctive present vegetation:* Silver sagebrush, Nevada bluegrass, Baltic rush

#### Inclusion 2

*Classification:* Aquic Chromoxererts, fine, montmorillonitic, frigid  
*Position on landscape:* The lower areas of interplateau basins  
*Distinctive present vegetation:* Povertyweed, mat muhly

#### Inclusion 3

*Classification:* Fluventic Haploxerolls, fine-loamy, mixed, frigid  
*Position on landscape:* Stream terraces cut into interplateau basins  
*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush, bluebunch wheatgrass

#### Inclusion 4

*Classification:* Cumulic Haplaquolls, fine, montmorillonitic, frigid  
*Position on landscape:* Interplateau basins adjacent to springs  
*Distinctive present vegetation:* Sedge, rush

### Interpretive Groups

*Capability classification:* Boulder Lake soil—Vlw, nonirrigated  
*Range site:* Boulder Lake soil—023XY003NV; Inclusion 1—023XY003NV; Inclusion 2—023XY023NV; Inclusion 3—023XY022NV; Inclusion 4—023XY013NV

## 810—Voltaire-Truckee association

### Map Unit Setting

*Position on landscape:* Flood plains

### Composition

*Major components:*

- Voltaire silty clay loam, 0 to 2 percent slopes—50 percent
  - Truckee clay loam, 0 to 2 percent slopes—35 percent
- Contrasting inclusions:*
- Inclusion 1: Aeric Halaquepts sandy loam, 0 to 2 percent slopes—5 percent
  - Inclusion 2: Typic Haplaquolls loam, 0 to 2 percent slopes—4 percent
  - Inclusion 3: Aquic Torriorthents loam, 0 to 2 percent slopes—3 percent
  - Inclusion 4: Fluvaquentic Haplaquolls silty clay, 0 to 2 percent slopes—3 percent

### Characteristics of the Voltaire Soil

*Classification:* Fluvaquentic Haplaquolls, fine-loamy, mixed (calcareous), mesic  
*Position on landscape:* The lower flood plains  
*Parent material:* Mixed alluvium  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,700 feet  
*Dominant present vegetation:* Nevada bluegrass, meadow barley

### Climatic Data

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 50 degrees F  
*Frost-free period:* About 100 days

### Typical Profile

*Depth:* 0 to 20 inches  
*Texture:* Silty clay loam  
*Structure:* Subangular blocky  
*Consistence:* Friable  
*Reaction:* Strongly alkaline  
*Salinity:* 4 to 8 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 20 to 60 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Moderately alkaline  
*Salinity:* 4 to 8 mmhos per cm  
*Sodicity:* SAR less than 13

### Soil and Water Features

*Depth to a seasonal high water table:* 0 to 18 inches  
*Flooding:* Frequency—occasional; duration—brief; months—December through March

*Permeability:* Slow  
*Available water capacity:* 10.0 to 11.2 inches  
*Water-supplying capacity:* 14 to 26 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—high; concrete—moderate  
*Potential for frost action:* High

### **Characteristics of the Truckee Soil**

*Classification:* Fluvaquentic Haploxerolls, fine-loamy, mixed, mesic  
*Position on landscape:* The higher flood plains  
*Parent material:* Mixed alluvium  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,700 feet  
*Dominant present vegetation:* Creeping wildrye, rush, sedge, Nevada bluegrass

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 50 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Depth:* 0 to 13 inches  
*Texture:* Clay loam  
*Structure:* Subangular blocky  
*Consistence:* Hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 13 to 60 inches  
*Texture:* Loam  
*Structure:* Massive  
*Consistence:* Slightly hard, friable  
*Reaction:* Moderately alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR less than 13

### **Soil and Water Features**

*Depth to a seasonal high water table:* 24 to 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderately slow  
*Available water capacity:* 8.9 to 10.6 inches  
*Water-supplying capacity:* 20 to 26 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic  
*Position on landscape:* Margins of flood plains  
*Distinctive present vegetation:* Black greasewood, inland saltgrass, Baltic rush

#### **Inclusion 2**

*Classification:* Typic Haplaquolls, fine-loamy, mixed (calcareous), mesic  
*Position on landscape:* The lowest part of flood plains  
*Distinctive present vegetation:* Cattail, bulrush

#### **Inclusion 3**

*Classification:* Aquic Torriorthents, fine-loamy, mixed (calcareous), mesic  
*Position on landscape:* Margins of flood plains  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### **Inclusion 4**

*Classification:* Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Flood plains  
*Distinctive present vegetation:* Sedge, rush

### **Interpretive Groups**

*Capability classification:* Voltaire soil—VIw, Truckee soil—IVw, irrigated; Voltaire and Truckee soils—VIIw, nonirrigated  
*Range site:* Voltaire soil—026XY003NV; Truckee soil—026XY001NV; Inclusion 1—027XY005NV; Inclusion 2—027XY001NV; Inclusion 3—023XY005NV; Inclusion 4—023XY013NV

## **811—Voltaire-Fluvaquents-Veta association**

### **Map Unit Setting**

*Position on landscape:* Stream terraces, channels, and fanlettes

### **Composition**

*Major components:*

- Voltaire loam, 0 to 2 percent slopes—35 percent
- Fluvaquents very gravelly coarse sand, 0 to 2 percent slopes—30 percent
- Veta gravelly sandy loam, 2 to 4 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents gravelly sandy loam, 0 to 8 percent slopes—5 percent

- Inclusion 2: Xerollic Haplargids stony sandy loam, 8 to 50 percent slopes—4 percent
- Inclusion 3: Rock outcrop—1 percent

### **Characteristics of the Voltaire Soil**

*Classification:* Fluvaquentic Haplaquolls, fine-loamy, mixed (calcareous), mesic

*Position on landscape:* Stream terraces

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Basin big sagebrush, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Depth:* 0 to 20 inches

*Texture:* Loam

*Structure:* Subangular blocky

*Consistence:* Friable

*Reaction:* Moderately alkaline

*Salinity:* 4 to 8 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 20 to 60 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 8 mmhos per cm

*Sodicity:* SAR less than 13

#### **Soil and Water Features**

*Depth to a seasonal high water table:* 60 to 72 inches (artificially drained)

*Frequency of flooding:* Rare

*Permeability:* Slow

*Available water capacity:* 10.0 to 11.2 inches

*Water-supplying capacity:* 14 to 18 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Fluvaquents**

*Classification:* Fluvaquents

*Position on landscape:* Stream channels

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Willow, cottonwood, basin big sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 100 days

#### **Representative Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 6 inches

*Texture:* Very gravelly coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 60 inches

*Texture:* Stratified very gravelly coarse sand to clay loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* 0 to 36 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through August

*Permeability:* Moderate

*Available water capacity:* 2.3 to 5.7 inches

*Water-supplying capacity:* 14 to 18 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* High

### **Characteristics of the Veta Soil**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* The higher stream terraces and fanlettes

*Parent material:* Mixed alluvium

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Pebbles, 30 percent

*Depth:* 0 to 6 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 12 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 60 inches

*Texture:* Stratified extremely gravelly loamy sand to very gravelly loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 3.0 to 4.0 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower stream terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

##### **Inclusion 2**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Toe slopes of hills adjacent to stream terraces and fanettes

*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

##### **Inclusion 3**

*Position on landscape:* Side slopes of stream terraces

*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Voltaire soil—IIIw, Veta soil—IVs, irrigated; Voltaire soil—VIw, Fluvaquents—VIIw, Veta soil—VIIw, nonirrigated

*Range site:* Voltaire soil—023XY009NV; Fluvaquents—023XY034NV; Veta soil—023XY038NV; Inclusion 1—024XY003NV; Inclusion 2—026XY022NV; Inclusion 3—none

## **820—Horsecamp-Mahala association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

*Major components:*

- Horsecamp cobbly clay, 0 to 8 percent slopes—55 percent
- Mahala very cobbly silt loam, 0 to 8 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls stony loam, 2 to 15 percent slopes—3 percent
- Inclusion 2: Softscrabble very stony loam, 30 to 50 percent slopes—3 percent
- Inclusion 3: Rock outcrop—3 percent
- Inclusion 4: Boulder Lake silty clay, 0 to 2 percent slopes—1 percent

### **Characteristics of the Horsecamp Soil**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* The higher areas on summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 5,600 to 5,800 feet

*Dominant present vegetation:* Basin big sagebrush, oneflower helianthella, western wheatgrass

**Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 15 percent; pebbles, 5 percent

*Depth:* 0 to 1 inch  
*Texture:* Cobbly clay  
*Structure:* Granular  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 1 to 20 inches  
*Texture:* Clay  
*Structure:* Prismatic  
*Consistence:* Hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 20 to 40 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Very hard, friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 40 inches  
*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 40 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 5.7 to 8.5 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

**Characteristics of the Mahala Soil**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* The lower areas on summits of plateaus

*Parent material:* Residuum derived from tuff and influenced by loess

*Slope range:* 0 to 8 percent

*Elevation:* 5,600 to 5,800 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

**Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 40 percent; pebbles, 5 percent

*Depth:* 0 to 3 inches  
*Texture:* Very cobbly silt loam  
*Structure:* Fine platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 3 to 16 inches  
*Texture:* Clay  
*Structure:* Columnar  
*Consistence:* Extremely hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 16 to 36 inches  
*Texture:* Clay, silty clay loam  
*Structure:* Prismatic, subangular blocky  
*Consistence:* Hard, friable  
*Reaction:* Mildly alkaline or moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 36 inches  
*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 2.9 to 5.9 inches  
*Water-supplying capacity:* 9 to 11 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Low hills

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Inclusion 2**

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Concave, north-facing back slopes of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 3**

*Position on landscape:* Plateaus

*Distinctive present vegetation:* None

#### **Inclusion 4**

*Classification:* Aquic Chromoxererts, fine, montmorillonitic, frigid

*Position on landscape:* Interplateau basins

*Distinctive present vegetation:* Silver sagebrush, Nevada bluegrass, Baltic rush

### **Interpretive Groups**

*Capability classification:* Horsecamp soil—Vle, Mahala soil—VIIs, nonirrigated

*Range site:* Horsecamp soil—023XY033NV; Mahala soil—023XY031NV; Inclusion 1—023XY020NV; Inclusion 2—023XY007NV; Inclusion 3—none; Inclusion 4—023XY003NV

## **831—Kayo very stony sandy loam, 2 to 8 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Summits of fan piedmont remnants

### **Composition**

*Major component:*

- Kayo very stony sandy loam, 2 to 8 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Fulstone very stony loam, 4 to 8 percent slopes—4 percent
- Inclusion 2: Hawsley loamy sand, 2 to 8 percent slopes—3 percent

- Inclusion 3: Veta stony loam, 2 to 8 percent slopes—3 percent

### **Characteristics of the Kayo Soil**

*Classification:* Xeralfic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,600 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 5 percent; pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 18 inches

*Texture:* Very gravelly sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 to 60 inches

*Texture:* Very gravelly loamy coarse sand, very gravelly sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral to moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 2.6 to 4.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Abruptic Xerollic Durargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* The higher areas on summits of fan piedmont remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on fan piedmont remnants

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Inclusion 3**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Inset fans

*Distinctive present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Kayo soil—VIIIs, nonirrigated

*Range site:* Kayo soil—026XY024NV; Inclusion 1—023XY047NV; Inclusion 2—027XY009NV; Inclusion 3—026XY016NV

## **841—Beaches**

### **Map Unit Setting**

*Position on landscape:* Beach bars and lagoons adjacent to Pyramid Lake

### **Composition**

*Major component:*

- Beaches—85 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—7 percent
- Inclusion 2: Typic Torriorthents sandy loam, 2 to 8 percent slopes—4 percent
- Inclusion 3: Aquic Torriorthents loam, 0 to 8 percent slopes—3 percent
- Inclusion 4: Playas—1 percent

### **Characteristics of Beaches**

*Position on landscape:* Beaches

*Elevation:* 3,780 to 3,820 feet

*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Scattered tufa peaks

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower lake plain terraces adjacent to beaches

*Distinctive present vegetation:* Inland saltgrass, Russian thistle

#### **Inclusion 3**

*Classification:* Aquic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces adjacent to beaches

*Distinctive present vegetation:* Salt cedar

#### **Inclusion 4**

*Position on landscape:* Basin floors adjacent to beaches

*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Beaches—VIIIw

*Range site:* Beaches—none; Inclusion 1—none; Inclusion 2—none; Inclusion 3—none; Inclusion 4—none

## **850—Osobb-Rezave-Fireball association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

*Major components:*

- Osobb extremely stony fine sandy loam, 30 to 50 percent slopes—35 percent
- Rezave extremely stony very fine sandy loam, 0 to 15 percent slopes—30 percent
- Fireball extremely stony fine sandy loam, 30 to 50 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Natrargids extremely stony very fine sandy loam, 4 to 30 percent slopes—7 percent
- Inclusion 2: Old Camp extremely stony fine sandy loam, 15 to 50 percent slopes—5 percent
- Inclusion 3: Rock outcrop—3 percent

### **Characteristics of the Osobb Soil**

*Classification:* Entic Durorthids, loamy-skeletal, mixed, mesic, shallow

*Position on landscape:* Back slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 20 percent; cobbles, 20 percent; pebbles, 50 percent

*Depth:* 0 to 6 inches

*Texture:* Extremely stony fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 6 to 14 inches

*Texture:* Very cobbly fine sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 14 to 16 inches

*Texture:* Indurated hardpan

*Depth:* 16 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to a hardpan:* 8 to 20 inches

*Depth to bedrock:* 9 to 30 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.5 to 1.2 inches

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

#### **Characteristics of the Rezave Soil**

*Classification:* Lithic Natrargids, clayey, montmorillonitic, mesic

*Position on landscape:* Summits of plateaus

*Parent material:* Residuum derived from basalt

*Slope range:* 0 to 15 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 15 percent; cobbles, 10 percent; pebbles, 25 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely stony very fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 4 to 13 inches

*Texture:* Clay loam

*Structure:* Prismatic

*Consistence:* Slightly hard, friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR 13 to 23

*Depth:* 13 to 19 inches

*Texture:* Gravelly clay loam

*Structure:* Angular blocky

*Consistence:* Slightly hard, friable

*Reaction:* Strongly alkaline

*Salinity:* 2 to 8 mmhos per cm

*Sodicity:* SAR 13 to 23

*Depth:* 19 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.6 to 2.3 inches

*Water-supplying capacity:* 6 to 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Characteristics of the Fireball Soil**

*Classification:* Typic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Concave back slopes and foot slopes of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 30 to 50 percent  
*Elevation:* 4,400 to 5,000 feet  
*Dominant present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 50 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 25 percent; cobbles, 20 percent; pebbles, 35 percent

*Depth:* 0 to 5 inches  
*Texture:* Extremely stony fine sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 5 to 17 inches  
*Texture:* Very gravelly loam, very cobbly loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR 13 to 30

*Depth:* 17 to 41 inches  
*Texture:* Very gravelly loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 41 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 40 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.8 to 4.2 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Natrargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Slightly concave shoulders of plateaus  
*Distinctive present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* The higher, north- and east-facing side slopes of plateaus  
*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

#### **Inclusion 3**

*Position on landscape:* Plateaus  
*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Osobb, Rezave, and Fireball soils—VIIIs, nonirrigated  
*Range site:* Osobb soil—027XY027NV; Rezave soil—027XY018NV; Fireball soil—027XY017NV; Inclusion 1—027XY018NV; Inclusion 2—026XY022NV; Inclusion 3—none

## **890—Slocave-Arclay-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Hills

### **Composition**

*Major components:*

- Slocave very gravelly coarse sandy loam, 50 to 75 percent slopes—45 percent

- Arclay very gravelly coarse sandy loam, 50 to 75 percent slopes—25 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Arclay very gravelly coarse sandy loam, 15 to 50 percent slopes—8 percent
- Inclusion 2: Xerollic Haplargids gravelly sandy loam, 30 to 75 percent slopes—7 percent

**Characteristics of the Slocave Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow

*Position on landscape:* South- and west-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 50 to 75 percent

*Elevation:* 4,300 to 5,300 feet

*Dominant present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

**Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly coarse sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 2 to 7 inches

*Texture:* Very gravelly coarse sandy loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 7 to 30 inches

*Texture:* Weathered bedrock

*Depth:* 30 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.3 to 1.0 inch

*Water-supplying capacity:* 4 to 6 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Arclay Soil**

*Classification:* Aridic Argixerolls, loamy, mixed, mesic, shallow

*Position on landscape:* North- and east-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 50 to 75 percent

*Elevation:* 4,500 to 5,300 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, Thurber needlegrass

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; cobbles, 10 percent; pebbles, 45 percent

*Depth:* 0 to 5 inches

*Texture:* Very gravelly coarse sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 14 inches

*Texture:* Gravelly sandy clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral or mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 to 40 inches

*Texture:* Weathered bedrock

*Depth:* 40 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.2 to 2.0 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Very rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Crests and side slopes of hills  
*Kind of rock:* Granite

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aridic Argixerolls, loamy, mixed, mesic, shallow  
*Position on landscape:* Crests and shoulders of hills  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, Thurber needlegrass

#### **Inclusion 2**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic, shallow  
*Position on landscape:* The upper, south-facing shoulders and back slopes of hills  
*Distinctive present vegetation:* Utah juniper, Lahontan sagebrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Slocave and Arclay soils—VIIIs, nonirrigated; Rock outcrop—VIIIIs  
*Range site:* Slocave soil—027XY017NV; Arclay soil—027XY079NV; Rock outcrop—none; Inclusion 1—027XY079NV; Inclusion 2—023XY063NV

## **892—Slocave-Singatse-Jaybee association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Slocave very gravelly coarse sandy loam, 15 to 50 percent slopes—35 percent
- Singatse very gravelly sandy loam, 30 to 50 percent slopes—30 percent
- Jaybee very gravelly sandy loam, 15 to 50 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—7 percent

- Inclusion 2: Fluventic Haploxerolls stony loam, 2 to 4 percent slopes—3 percent
- Inclusion 3: Theon very gravelly loam, 8 to 30 percent slopes—3 percent
- Inclusion 4: Fluvaquentic Haploxerolls very gravelly loamy sand, 2 to 4 percent slopes—2 percent

### **Characteristics of the Slocave Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow  
*Position on landscape:* South-, east-, and west-facing side slopes of mountains  
*Parent material:* Residuum and colluvium derived from granite  
*Slope range:* 15 to 50 percent  
*Elevation:* 4,400 to 5,500 feet  
*Dominant present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches

## **900—Playas**

### **Map Unit Setting**

*Position on landscape:* Basin floors

### **Composition**

*Major component:*

- Playas—95 percent

*Contrasting inclusions:*

- Inclusion 1: Umlerland silty clay loam, 0 to 2 percent slopes—4 percent

- Inclusion 2: Haplaquolls loam, 2 to 4 percent slopes—1 percent

### **Characteristics of the Playas**

*Position on landscape:* The lowest part of basin floors

*Slope range:* 0 to 1 percent

*Dominant present vegetation:* None

### **Typical Profile**

*Depth:* 0 to 6 inches

*Texture:* Silty clay

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 100

*Depth:* 6 to 60 inches

*Texture:* Silty clay

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 100

### **Soil and Water Features**

*Seasonal high water table:* 12 inches above to 12 inches below the surface

*Permeability:* Very slow

*Runoff:* Ponded

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—5

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lowest lake plain terraces

*Distinctive present vegetation:* Inland saltgrass

#### **Inclusion 2**

*Classification:* Haplaquolls, loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces adjacent to seeps

*Distinctive present vegetation:* Nevada bluegrass, meadow barley

### **Interpretive Groups**

*Capability classification:* Playas—VIIIw

*Range site:* Playas—none; Inclusion 1—026XY002NV; Inclusion 2—026XY003NV

## **901—Dune land-Playas complex, 0 to 30 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Sand dunes and basin floors

### **Composition**

*Major components:*

- Dune land, 4 to 30 percent slopes—65 percent

- Playas, 0 to 1 percent slopes—30 percent

*Contrasting inclusion:*

- Inclusion 1: Isolde fine sand, 4 to 30 percent slopes—5 percent

### **Characteristics of Dune Land**

*Position on landscape:* Unstabilized sand dunes

*Slope range:* 4 to 30 percent

*Dominant present vegetation:* None

### **Typical Profile**

*Depth:* 0 to 6 inches

*Texture:* Fine sand

*Depth:* 6 to 60 inches

*Texture:* Fine sand

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Permeability:* Rapid or very rapid

*Runoff:* Very slow or slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—1

### **Characteristics of the Playas**

*Position on landscape:* The lowest part of basin floors

*Slope range:* 0 to 1 percent

*Dominant present vegetation:* None

### **Typical Profile**

*Depth:* 0 to 6 inches

*Texture:* Silty clay

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 100

*Depth:* 6 to 60 inches

*Texture:* Silty clay

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 100

### **Soil and Water Features**

*Seasonal high water table:* 12 inches above to 12 inches below the surface

*Permeability:* Very slow

*Runoff:* Ponded

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—5

### **Contrasting Inclusion**

#### **Inclusion 1**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Semistabilized dunes

*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### **Interpretive Groups**

*Capability classification:* Dune land—VIIIe; Playas—VIIIw

*Range site:* Dune land—none; Playas—none; Inclusion 1—027XY016NV

### **910—Shawave-Deadyon association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

#### **Composition**

*Major components:*

- Shawave gravelly sandy loam, 2 to 8 percent slopes—45 percent
- Deadyon sandy loam, 2 to 8 percent slopes—40 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids very gravelly loam, 4 to 15 percent slopes—8 percent
- Inclusion 2: Shawave gravelly sandy loam, 8 to 30 percent slopes—4 percent
- Inclusion 3: Davey gravelly loamy sand, 2 to 8 percent slopes—3 percent

#### **Characteristics of the Shawave Soil**

*Classification:* Xerollic Haplargids, fine-loamy, mixed, mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Granitic alluvium influenced by loess and volcanic ash

*Slope range:* 2 to 8 percent

*Elevation:* 4,200 to 4,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 52 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 8 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 16 inches

*Texture:* Sandy clay loam

*Structure:* Prismatic

*Consistence:* Hard, friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 to 40 inches

*Texture:* Coarse sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 40 to 60 inches

*Texture:* Loamy coarse sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.6 to 6.2 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

#### **Characteristics of the Deadyon Soil**

*Classification:* Xerollic Haplargids, coarse-loamy, mixed, mesic

*Position on landscape:* Inset fan remnants

*Parent material:* Granitic alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,200 to 4,700 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 50 degrees F  
*Frost-free period:* About 110 days

**Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 5 inches  
*Texture:* Sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 5 to 24 inches  
*Texture:* Sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 24 to 35 inches  
*Texture:* Sandy loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 35 to 60 inches  
*Texture:* Gravelly loamy sand  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 4.3 to 7.7 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

**Contrasting Inclusions****Inclusion 1**

*Classification:* Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* Fan piedmont remnants in areas of volcanic alluvium  
*Distinctive present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

**Inclusion 2**

*Classification:* Xerollic Haplargids, fine-loamy, mixed, mesic  
*Position on landscape:* Side slopes of fan piedmont remnants  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Xerollic Camborthids, sandy, mixed, mesic  
*Position on landscape:* Beach terraces adjacent to the lower part of fan piedmonts  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, Indian ricegrass

**Interpretive Groups**

*Capability classification:* Shawave and Deadyon soils—IIIe, irrigated; Shawave soil—VIc, Deadyon soil—VIIc, nonirrigated

*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

**Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Alluvial fans  
*Parent material:* Mixed alluvium  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Pebbles, 20 percent  
*Depth:* 0 to 3 inches  
*Texture:* Gravelly sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6  
*Depth:* 3 to 60 inches  
*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 3.0 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torrifluvents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Fan skirts adjacent to the lower alluvial fans  
*Distinctive present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Drainageways on fans  
*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

**Interpretive Groups**

*Capability classification:* Bluewing and Trocken soils—VIIs, nonirrigated  
*Range site:* Bluewing soil—027XY022NV; Trocken soil—027XY018NV; Inclusion 1—027XY018NV; Inclusion 2—027XY029NV

**1060—Trocken-Mazuma association****Map Unit Setting**

*Position on landscape:* Alluvial fans, lake plain terraces, and fan skirts

**Composition****Major components:**

- Trocken very gravelly sandy loam, 2 to 8 percent slopes—60 percent
- Mazuma fine sandy loam, 0 to 2 percent slopes—25 percent

**Contrasting inclusions:**

- Inclusion 1: Ganaflan gravelly loam, 0 to 4 percent slopes—9 percent
- Inclusion 2: Xeric Torriorthents very gravelly loam, 2 to 8 percent slopes—6 percent

**Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Fan collars and fan aprons  
*Distinctive present vegetation:* Littleleaf horsebrush, rubber rabbitbrush, spiny hopsage, Indian ricegrass

#### Inclusion 3

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Eroded lake plain terraces  
*Distinctive present vegetation:* Shadscale, desert needlegrass

### Interpretive Groups

*Capability classification:* Trocken and Mazuma soils—VIIs, nonirrigated  
*Range site:* Trocken soils—024XY002NV; Mazuma soil—024XY003NV; Inclusion 1—023XY038NV;

Inclusion 2—027XY022NV; Inclusion 3—027XY027NV

## 1065—Trocken-Ruhe-Bluewing association

### Map Unit Setting

*Position on landscape:* Beach terraces, alluvial fans, and inset fans

### Composition

#### Major components:

- Trocken very stony sandy loam, 4 to 15 percent slopes—40 percent
  - Ruhe very stony loamy sand, 4 to 15 percent slopes—30 percent
  - Bluewing very stony sandy loam, 4 to 15 percent slopes—15 percent
- Contrasting inclusions:*
- Inclusion 1: Isolde fine sand, 2 to 8 percent slopes—8 percent
  - Inclusion 2: Hawsley loamy sand, 2 to 8 percent slopes—7 percent

### Characteristics of the Trocken Soil

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Beach terraces and alluvial fans  
*Parent material:* Mixed alluvium  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 20 percent

*Depth:* 0 to 3 inches  
*Texture:* Very stony sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches  
*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam  
*Structure:* Massive  
*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 3.0 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Characteristics of the Ruhe Soil**

*Classification:* Typic Torripsamments, mixed, mesic, shallow  
*Position on landscape:* Beach terraces  
*Parent material:* Mixed sandy alluvium  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 15 percent

*Depth:* 0 to 2 inches  
*Texture:* Very stony loamy sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Strongly alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 2 to 16 inches  
*Texture:* Loamy sand  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 16 to 30 inches  
*Texture:* Unweathered bedrock

*Depth:* 30 to 60 inches  
*Texture:* Extremely gravelly sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Very strongly alkaline  
*Salinity:* 4 to 8 mmhos per cm  
*Sodicity:* SAR less than 13

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 14 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Rapid  
*Available water capacity:* 0.7 to 1.0 inch  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Bluewing Soil**

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Inset fans  
*Parent material:* Mixed alluvium  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 35 percent

*Depth:* 0 to 7 inches  
*Texture:* Very stony sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 7 to 60 inches

*Texture:* Stratified very gravelly coarse sand to extremely gravelly sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Very rapid

*Available water capacity:* 2.4 to 3.7 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Dunes superimposed on beach terraces and alluvial fans

*Distinctive present vegetation:* Hairy horsebrush, littleleaf horsebrush, Indian ricegrass

#### **Inclusion 2**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on alluvial fans

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

### **Interpretive Groups**

*Capability classification:* Trocken, Ruhe, and Bluewing soils—VII, nonirrigated

*Range site:* Trocken soil—027XY013NV; Ruhe soil—027XY009NV; Bluewing soil—027XY018NV; Inclusion 1—027XY023NV; Inclusion 2—027XY009NV

## **1067—Trocken, moist-Mazuma association**

### **Map Unit Setting**

*Position on landscape:* Fan skirts and lake plain terraces

### **Composition**

*Major components:*

- Trocken gravelly fine sandy loam, 0 to 4 percent slopes—65 percent

- Mazuma fine sandy loam, 0 to 2 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Hawsley loamy fine sand, 2 to 15 percent slopes—5 percent

- Inclusion 2: Typic Torriorthents sandy loam, 0 to 4 percent slopes—5 percent

- Inclusion 3: Bluewing cobbly loamy sand, 2 to 4 percent slopes—5 percent

### **Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Gravelly fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches

*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 2.4 to 3.6 inches

*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### **Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The lower fan skirts and lake plain terraces  
*Parent material:* Loamy lacustrine material  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,400 feet  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Fine sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 8 to 30 inches  
*Texture:* Sandy loam, fine sandy loam  
*Structure:* Subangular blocky or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline or very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 36

*Depth:* 30 to 60 inches  
*Texture:* Stratified silt loam to sand  
*Structure:* Platy, single grained, or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline to very strongly alkaline  
*Salinity:* More than 2 mmhos per cm  
*Sodicity:* SAR 13 to 36

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Fan skirts

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Channels and fan aprons

*Distinctive present vegetation:* Littleleaf horsebrush, rubber rabbitbrush, spiny hopsage, Indian ricegrass

### **Interpretive Groups**

*Capability classification:* Trocken and Mazuma soils—VIIs, nonirrigated

*Range site:* Trocken soil—024XY014NV; Mazuma soil—024XY003NV; Inclusion 1—027XY009NV; Inclusion 2—024XY004NV; Inclusion 3—027XY022NV

## **1068—Trocken-Hawsley association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmont remnants and sand sheets

### **Composition**

*Major components:*

- Trocken gravelly fine sandy loam, 0 to 4 percent slopes—50 percent
- Hawsley fine sand, 0 to 4 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Toulon very gravelly fine sandy loam, 0 to 8 percent slopes—9 percent
- Inclusion 2: Bluewing very stony loamy sand, 4 to 8 percent slopes—6 percent

**Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Gravelly fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches

*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 2.4 to 3.6 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Hawsley Soil**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on fan piedmont remnants

*Parent material:* Mixed alluvium and water-reworked eolian deposits

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 8 to 42 inches

*Texture:* Stratified fine sand and sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 42 to 60 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very rapid

*Available water capacity:* 3.6 to 4.8 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—slight; by wind—high

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Camborthids, sandy-skeletal, mixed, mesic

*Position on landscape:* Offshore bars

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Fan collars and fan aprons

*Distinctive present vegetation:* Littleleaf horsebrush, rubber rabbitbrush, spiny hopsage, Indian ricegrass

### **Interpretive Groups**

*Capability classification:* Hawsley soil—IVs, irrigated; Trocken and Hawsley soils—VIIs, irrigated

*Range site:* Trocken soil—024XY014NV; Hawsley soil—027XY009NV; Inclusion 1—024XY002NV; Inclusion 2—027XY022NV

## **1160—Glenbrook-Graufels-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Glenbrook gravelly loamy coarse sand, 30 to 50 percent slopes—40 percent
- Graufels gravelly loamy coarse sand, 30 to 50 percent slopes—30 percent
- Rock outcrop—20 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids gravelly sandy loam, 8 to 50 percent slopes—7 percent
- Inclusion 2: Xeric Torriorthents gravelly sandy loam, 2 to 8 percent slopes—3 percent

### **Characteristics of the Glenbrook Soil**

*Classification:* Xeric Torripsamments, mixed, mesic, shallow

*Position on landscape:* Shoulders and south- and west-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 50 percent

*Elevation:* 5,000 to 7,100 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 30 percent

*Depth:* 0 to 9 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 9 to 15 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 0.6 to 1.2 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Graufels Soil**

*Classification:* Torripsammentic Haploxerolls, sandy, mixed, mesic

*Position on landscape:* North- and east-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 50 percent

*Elevation:* 5,000 to 7,100 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 90 days

### Typical Profile

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 10 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 22 inches

*Texture:* Gravelly loamy coarse sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 22 to 40 inches

*Texture:* Weathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 1.5 to 3.0 inches

*Water-supplying capacity:* 11 to 13 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Characteristics of the Rock Outcrop

*Position on landscape:* Summits and side slopes of mountains

*Kind of rock:* Granite

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic, shallow

*Position on landscape:* Crests and shoulders of mountains

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### Inclusion 2

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Stream terraces

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, basin wildrye

### Interpretive Groups

*Capability classification:* Glenbrook soil—VIIe, Graufels soil—VIIs, nonirrigated; Rock outcrop—VIIIs

*Range site:* Glenbrook soil—023XY039NV; Graufels soil—023XY039NV; Rock outcrop—none; Inclusion 1—023XY037NV; Inclusion 2—026XY034NV

## 1190—Ragtown-Isolde complex, 0 to 15 percent slopes

### Map Unit Setting

*Position on landscape:* Lake plain terraces and dunes

### Composition

*Major components:*

- Ragtown silty clay loam, 0 to 2 percent slopes—65 percent
- Isolde fine sand, 4 to 15 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents silt loam, 0 to 2 percent slopes—9 percent
- Inclusion 2: Typic Torriorthents loamy fine sand, 4 to 8 percent slopes—6 percent

### Characteristics of the Ragtown Soil

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Black greasewood, seepweed, shadscale

### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches

*Texture:* Silty clay loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Characteristics of the Isolde Soil**

*Classification:* Typic Torripsammments, mixed, mesic  
*Position on landscape:* Dunes  
*Parent material:* Sandy eolian material derived from mixed rocks  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,900 to 4,200 feet  
*Dominant present vegetation:* Black greasewood, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 4 inches  
*Texture:* Fine sand  
*Structure:* Single grained  
*Consistence:* Loose

*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 4 to 60 inches  
*Texture:* Fine sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very rapid  
*Available water capacity:* 3.6 to 5.4 inches  
*Water-supplying capacity:* 5 to 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—1  
*Hazard of erosion:* By water—slight; by wind—high  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Torriorthents, fine-loamy, mixed (calcareous), mesic  
*Position on landscape:* Lake plain terraces  
*Distinctive present vegetation:* Black greasewood, seepweed, shadscale

##### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Toe slopes of dunes  
*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### **Interpretive Groups**

*Capability classification:* Isolde soil—IVs, irrigated; Ragtown and Isolde soils—VIIs, nonirrigated  
*Range site:* Ragtown soil—027XY025NV; Isolde soil—027XY016NV; Inclusion 1—027XY025NV; Inclusion 2—027XY016NV

#### **1191—Ragtown association**

##### **Map Unit Setting**

*Position on landscape:* Lake plain terrace remnants

### Composition

#### Major components:

- Ragtown clay loam, 0 to 2 percent slopes—60 percent
- Ragtown clay loam, moist, 0 to 2 percent slopes—25 percent

#### Contrasting inclusions:

- Inclusion 1: Playas—9 percent
- Inclusion 2: Isolde fine sand, 2 to 15 percent slopes—5 percent
- Inclusion 3: Badland—1 percent

### Characteristics of the Ragtown Soil

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Smooth or slightly convex lake plain terrace remnants

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### Typical Profile

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches

*Texture:* Clay loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches

*Texture:* Clay

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR more than 68

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 9.7 to 11.3 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### Characteristics of the Moist Ragtown Soil

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Slightly concave to convex, dissected lake plain terrace remnants

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

#### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### Typical Profile

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches

*Texture:* Clay loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches

*Texture:* Clay

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR more than 68

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 9.7 to 11.3 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* The lowest part of lake plain terraces

*Distinctive present vegetation:* None

#### Inclusion 2

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Dunes superimposed on lake plain terraces

*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### Inclusion 3

*Position on landscape:* Eroded lake plain terraces

*Distinctive present vegetation:* None

### Interpretive Groups

*Capability classification:* Ragtown soils—VII<sub>s</sub>, nonirrigated

*Range site:* Ragtown soil—027XY025NV; the moist Ragtown soil—024XY003NV; Inclusion 1—none; Inclusion 2—027XY016NV; Inclusion 3—none

## 1192—Ragtown-Umberland association

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major components:*

- Ragtown fine sandy loam, 2 to 4 percent slopes—50 percent
- Umberland silty clay loam, 0 to 2 percent slopes—25 percent

- Ragtown fine sandy loam, dry, 2 to 4 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents loam, 2 to 4 percent slopes—9 percent
- Inclusion 2: Badland—1 percent

### Characteristics of the Ragtown Soil

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Smooth or slightly convex lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 2 to 4 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Pebbles, 5 percent

*Depth:* 0 to 10 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches

*Texture:* Clay

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR more than 68

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 9.7 to 11.3 inches

*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Characteristics of the UMBERLAND Soil**

*Classification:* Aerlic Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Slightly concave lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,100 feet  
*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 15 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 15 to 60 inches  
*Texture:* Silty clay loam, silty clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Characteristics of the Dry Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Convex, eroded lake plain terraces at the lower elevations  
*Parent material:* Lacustrine sediments  
*Slope range:* 2 to 4 percent  
*Elevation:* 3,900 to 4,100 feet  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 5 percent  
*Depth:* 0 to 10 inches  
*Texture:* Fine sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, fine, montmorillonitic, (calcareous), mesic

*Position on landscape:* Broad, concave drainageways adjacent to eroded lake plain terrace remnants

*Distinctive present vegetation:* Black greasewood, sagebrush, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Eroded lake plain terraces

*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Ragtown soils—VII<sub>s</sub>, nonirrigated; Umberland soil—VII<sub>w</sub>, nonirrigated

*Range site:* Ragtown soil—024XY002NV; Umberland soil—024XY015NV; the dry Ragtown soil—024XY003NV; Inclusion 1—024XY022NV; Inclusion 2—none

## **1194—Ragtown-Swangler-Benin association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major components:*

- Ragtown silty clay loam, 0 to 2 percent slopes—40 percent
- Swangler fine sandy loam, 0 to 4 percent slopes—30 percent
- Benin silty clay loam, 0 to 2 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Haybourne sandy loam, 2 to 4 percent slopes—6 percent
- Inclusion 2: Ragtown silt loam, 0 to 2 percent slopes—5 percent
- Inclusion 3: Vertic Camborthids silty clay, 4 to 8 percent slopes—4 percent

### **Characteristics of the Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The middle lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,100 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 10 inches

*Texture:* Silty clay loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches

*Texture:* Clay loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches

*Texture:* Clay

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 9.7 to 11.3 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Swangler Soil**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* The upper lake plain terraces

*Parent material:* Mixed alluvium over lacustrine sediments

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,100 feet  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 6 inches  
*Texture:* Fine sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 6 to 60 inches  
*Texture:* Stratified very fine sandy loam and silt loam  
*Structure:* Massive  
*Consistence:* Slightly hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 8.4 to 10.9 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—high; concrete—moderate  
*Potential for frost action:* Low

#### **Characteristics of the Benin Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,100 feet  
*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 1 inch  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 1 to 60 inches  
*Texture:* Silty clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Very hard, very firm  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 23 to 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—occasional; duration—very brief; months—November through June  
*Permeability:* Very slow  
*Available water capacity:* 9.0 to 9.8 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Xerollic Camborthids, coarse-loamy, mixed, mesic  
*Position on landscape:* Alluvial fans  
*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

##### **Inclusion 2**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The middle lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

##### **Inclusion 3**

*Classification:* Vertic Camborthids, fine, montmorillonitic, mesic  
*Position on landscape:* The middle lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Swingler soil—Ile, irrigated; Ragtown soil—VIIc, Swingler soil—VIIc, Benin soil—VIIw, nonirrigated

*Range site:* Ragtown soil—024XY002NV; Swingler soil—024XY003NV; Benin soil—024XY015NV; Inclusion 1—023XY006NV; Inclusion 2—024XY002NV; Inclusion 3—024XY002NV

## **1200—Dosie-Devada association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Dosie extremely stony loam, 15 to 50 percent slopes—60 percent
- Devada very stony loam, 4 to 15 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Softscrabble stony loam, 15 to 50 percent slopes—6 percent
- Inclusion 2: Rubble land—4 percent
- Inclusion 3: Lithic Argixerolls extremely stony loam, 4 to 15 percent slopes—3 percent
- Inclusion 4: Rock outcrop—2 percent

### **Characteristics of the Dosie Soil**

*Classification:* Pachic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* Side slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 5,400 to 6,800 feet

*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 85 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 30 percent; cobbles, 15 percent; pebbles, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Extremely stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 41 inches

*Texture:* Very gravelly clay loam, very gravelly clay

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 41 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 4.0 to 5.4 inches

*Water-supplying capacity:* 11 to 13 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Devada Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Toe slopes and crests of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 5,400 to 6,800 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 15 percent; pebbles, 15 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 13 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 12 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* North-facing side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### Inclusion 2

*Position on landscape:* Side slopes of mountains

*Distinctive present vegetation:* None

#### Inclusion 3

*Classification:* Lithic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* Convex crests of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Utah juniper

#### Inclusion 4

*Position on landscape:* Mountain peaks

*Distinctive present vegetation:* None

### Interpretive Groups

*Capability classification:* Dosie and Devada soils—VII<sub>s</sub>, irrigated

*Range site:* Dosie soil—023XY016NV; Devada soil—023XY031NV; Inclusion 1—023XY007NV; Inclusion 2—none; Inclusion 3—023XY035NV; Inclusion 4—none

### 1201—Dosie-Rubble land association

#### Map Unit Setting

*Position on landscape:* Plateaus

#### Composition

*Major components:*

- Dosie extremely stony loam, 15 to 50 percent slopes—65 percent
- Rubble land—25 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Camborthids extremely stony clay, 2 to 15 percent slopes—4 percent
- Inclusion 2: Softscrabble very stony loam, 15 to 50 percent slopes—3 percent
- Inclusion 3: Pickup extremely stony clay loam, 30 to 50 percent slopes—3 percent

#### Characteristics of the Dosie Soil

*Classification:* Pachic Argixerolls, clayey-skeletal, montmorillonitic, mesic

*Position on landscape:* Side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 5,200 to 6,200 feet

*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

#### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 85 days

#### Typical Profile

*Surface cover:* Stones and boulders, 30 percent; cobbles, 15 percent; pebbles, 10 percent

*Depth:* 0 to 5 inches

*Texture:* Extremely stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 41 inches  
*Texture:* Very gravelly clay loam, very gravelly clay  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 41 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 40 to 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 4.0 to 5.4 inches  
*Water-supplying capacity:* 11 to 13 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.10; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### Characteristics of the Rubble Land

*Surface cover:* Stones, boulders, and cobbles, 90 to 100 percent  
*Position on landscape:* Side slopes of plateaus

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Lithic Xerollic Camborthids, clayey, montmorillonitic, mesic  
*Position on landscape:* Summits of plateaus  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Utah juniper

#### Inclusion 2

*Classification:* Pachic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* North-facing back slopes of plateaus  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

#### Inclusion 3

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* The lower, south-facing side slopes of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### Interpretive Groups

*Capability classification:* Dosie soil—VIIIs, nonirrigated; Rubble land—VIIIIs  
*Range site:* Dosie soil—023XY016NV; Rubble land—none; Inclusion 1—023XY035NV; Inclusion 2—023XY041NV; Inclusion 3—023XY037NV

### 1220—Ceejay-Pickup association

#### Map Unit Setting

*Position on landscape:* Plateaus

#### Composition

*Major components:*

- Ceejay very stony loam, 4 to 30 percent slopes—65 percent
- Pickup very stony loam, 15 to 50 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Manogue extremely stony clay loam, 0 to 4 percent slopes—6 percent
- Inclusion 2: Reywat very stony loam, 15 to 50 percent slopes—5 percent
- Inclusion 3: Rock outcrop—2 percent
- Inclusion 4: Oppio very stony clay loam, 15 to 50 percent slopes—2 percent

### Characteristics of the Ceejay Soil

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic  
*Position on landscape:* Summits, back slopes, and shoulders of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 4 to 30 percent  
*Elevation:* 4,400 to 5,700 feet  
*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 40 percent  
*Depth:* 0 to 2 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches  
*Texture:* Cobbly clay, cobbly clay loam  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Hard, friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 4 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 16 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 14 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.8 to 2.6 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### Characteristics of the Pickup Soil

*Classification:* Aridic Argixerolls, clayey-skeletal, montmorillonitic, mesic  
*Position on landscape:* North- and east-facing back slopes of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 15 to 50 percent  
*Elevation:* 4,400 to 5,700 feet  
*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### Climatic Data

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent  
*Depth:* 0 to 8 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 34 inches  
*Texture:* Very gravelly clay  
*Structure:* Prismatic parting to subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 34 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 2.2 to 4.4 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic  
*Position on landscape:* Concave summits of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 2

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* The higher, north-facing back slopes of plateaus  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### Inclusion 3

*Position on landscape:* Rims of plateaus  
*Distinctive present vegetation:* None

#### Inclusion 4

*Classification:* Xerollic Haplargids, fine, montmorillonitic, mesic  
*Position on landscape:* South- and west-facing side slopes of plateaus  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Ceejay and Pickup soils—VII<sub>s</sub>, nonirrigated

*Range site:* Ceejay soil—023XY047NV; Pickup soil—023XY037NV; Inclusion 1—023XY047NV; Inclusion 2—023XY039NV; Inclusion 3—none; Inclusion 4—023XY047NV

## **1221—Ceejay stony loam, 4 to 30 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Shoulders and back slopes of hills

### **Composition**

*Major component:*

- Ceejay stony loam, 4 to 30 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Oppio very stony clay loam, 30 to 50 percent slopes—5 percent
- Inclusion 2: Bombadil stony loam, 4 to 30 percent slopes—4 percent
- Inclusion 3: Theon stony loam, 4 to 15 percent slopes—3 percent
- Inclusion 4: Rock outcrop—3 percent

### **Characteristics of the Ceejay Soil**

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic

*Position on landscape:* Shoulders and back slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,400 to 5,200 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches

*Texture:* Stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches

*Texture:* Cobbly clay, cobbly clay loam

*Structure:* Prismatic parting to angular blocky

*Consistence:* Hard, friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Xerollic Haplargids, fine, montmorillonitic, mesic

*Position on landscape:* South-facing back slopes of hills

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* Shoulders and back slopes of hills

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Inclusion 3**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* The lower areas on crests of hills

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 4**

*Position on landscape:* Crests and side slopes of hills

*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Ceejay soil—VIIIs, nonirrigated  
*Range site:* Ceejay soil—023XY047NV; Inclusion 1—023XY047NV; Inclusion 2—023XY006NV; Inclusion 3—027XY013NV; Inclusion 4—none

## **1222—Ceejay-Verdico-Chalco association**

### **Map Unit Setting**

*Position on landscape:* Hills

### **Composition**

*Major components:*

- Ceejay stony loam, 4 to 15 percent slopes—40 percent
- Verdico extremely stony sandy loam, 8 to 30 percent slopes—30 percent
- Chalco very stony loam, 8 to 30 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Haplic Durargids very gravelly clay loam, 4 to 15 percent slopes—6 percent
- Inclusion 2: Oppio very stony clay loam, 30 to 50 percent slopes—6 percent
- Inclusion 3: Rock outcrop—3 percent

### **Characteristics of the Ceejay Soil**

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic

*Position on landscape:* Crests and shoulders of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 15 percent

*Elevation:* 4,400 to 4,800 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches

*Texture:* Stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches

*Texture:* Cobbly clay, cobbly clay loam

*Structure:* Prismatic parting to angular blocky

*Consistence:* Hard, friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 16 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Verdico Soil**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Smooth or concave back slopes of hills

*Parent material:* Residuum and colluvium derived from tuff

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 4,800 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 15 percent; cobbles, 10 percent; pebbles, 10 percent

*Depth:* 0 to 2 inches

*Texture:* Extremely stony sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 2 to 22 inches  
*Texture:* Clay  
*Structure:* Prismatic  
*Consistence:* Extremely hard, very firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 22 to 29 inches  
*Texture:* Gravelly clay  
*Structure:* Massive  
*Consistence:* Very hard, very firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 29 to 60 inches  
*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 20 to 40 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 3.0 to 6.0 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—8  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### **Characteristics of the Chalco Soil**

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic, shallow  
*Position on landscape:* Smooth or slightly convex back slopes of hills  
*Parent material:* Residuum and colluvium derived from tuff  
*Slope range:* 8 to 30 percent  
*Elevation:* 4,400 to 4,800 feet  
*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 8 percent; cobbles, 8 percent; pebbles, 35 percent

*Depth:* 0 to 3 inches  
*Texture:* Very stony loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 3 to 15 inches  
*Texture:* Clay  
*Structure:* Angular blocky  
*Consistence:* Hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 15 inches  
*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 1.3 to 2.6 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Haplic Durargids, fine, montmorillonitic, mesic  
*Position on landscape:* The lower, convex side slopes of hills  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Xerollic Haplargids, fine, montmorillonitic, mesic  
*Position on landscape:* Back slopes of hills  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 3**

*Position on landscape:* Crests and side slopes of hills  
*Distinctive present vegetation:* None

### **Interpretive Groups**

*Capability classification:* Ceejay, Verdico, and Chalco soils—VIIIs, nonirrigated

*Range site:* Ceejay soil—023XY047NV; Verdico soil—023XY047NV; Chalco soil—023XY047NV; Inclusion 1—024XY002NV; Inclusion 2—023XY047NV; Inclusion 3—none

## **1230—Singatse-Jaybee association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Singatse very gravelly sandy loam, 15 to 50 percent slopes—65 percent
- Jaybee very gravelly sandy loam, 15 to 50 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—9 percent
- Inclusion 2: Lithic Xeric Torriorthents very gravelly sandy loam, 15 to 50 percent slopes—6 percent

### **Characteristics of the Singatse Soil**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* South-, east-, and west-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 1 inch

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 1 to 6 inches

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 6 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.3 to 0.6 inch

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches

*Texture:* Gravelly clay

*Structure:* Prismatic

*Consistence:* Hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 0.9 to 1.7 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Convex, eroded side slopes of mountains

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Singatse and Jaybee soils—VIIs, nonirrigated

*Range site:* Singatse soil—027XY027NV; Jaybee soil—023XY047NV; Inclusion 1—none; Inclusion 2—023XY047NV

## **1240—Labkey-Mazuma association**

### **Map Unit Setting**

*Position on landscape:* Barrier bars and lagoons

### **Composition**

*Major components:*

- Labkey gravelly sandy loam, 2 to 8 percent slopes—55 percent

- Mazuma fine sandy loam, 0 to 4 percent slopes—30 percent

*Contrasting inclusions:*

- Inclusion 1: Ragtown very fine sandy loam, 0 to 2 percent slopes—5 percent
- Inclusion 2: Typic Torriorthents very fine sandy loam, 0 to 2 percent slopes—5 percent
- Inclusion 3: Hawsley loamy fine sand, 2 to 8 percent slopes—3 percent
- Inclusion 4: Typic Torriorthents sandy loam, 0 to 2 percent slopes—2 percent

### **Characteristics of the Labkey Soil**

*Classification:* Typic Camborthids, sandy-skeletal, mixed, mesic

*Position on landscape:* Barrier bars

*Parent material:* Granitic alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,300 feet

*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 4 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 4 to 14 inches

*Texture:* Gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 14 to 60 inches

*Texture:* Stratified gravelly coarse sand and very gravelly coarse sand

*Structure:* Single grained or massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.2 to 4.0 inches

*Water-supplying capacity:* 4 to 6 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Lagoons

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,300 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Black greasewood, seepweed, shadscale

**Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Bottom of lagoons

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on lagoons and barrier bars

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

**Inclusion 4**

*Classification:* Typic Torriorthents

*Position on landscape:* The lower beach terraces adjacent to barrier bars

*Distinctive present vegetation:* Black greasewood

**Interpretive Groups**

*Capability classification:* Labkey soil—IVs, Mazuma soil—Ile, irrigated; Labkey soil—VIIs, Mazuma soil—VIIc, nonirrigated

*Range site:* Labkey soil—027XY018NV; Mazuma soil—024XY002NV; Inclusion 1—027XY025NV; Inclusion 2—027XY013NV; Inclusion 3—027XY009NV; Inclusion 4—none

**1250—Jerval-Dorper association****Map Unit Setting**

*Position on landscape:* Fan piedmont remnants

**Composition**

*Major components:*

- Jerval gravelly very fine sandy loam, 2 to 8 percent slopes—50 percent

- Dorper stony very fine sandy loam, 2 to 8 percent slopes—35 percent
- Contrasting inclusions:*
- Inclusion 1: Typic Camborthids gravelly fine sandy loam, 2 to 8 percent slopes—5 percent
  - Inclusion 2: Typic Natrargids sandy loam, 4 to 30 percent slopes—5 percent
  - Inclusion 3: Xeric Torriorthents gravelly sandy loam, 2 to 8 percent slopes—5 percent

### **Characteristics of the Jerval Soil**

*Classification:* Duric Natrargids, fine-loamy, mixed, mesic

*Position on landscape:* The lower areas on summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope range:* 2 to 8 percent

*Elevation:* 4,700 to 4,900 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 10 inches

*Texture:* Gravelly very fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 10 to 20 inches

*Texture:* Gravelly clay loam

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 8 mmhos per cm

*Sodicity:* SAR 13 to 30

*Depth:* 20 to 60 inches

*Texture:* Very gravelly sandy loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 8 mmhos per cm

*Sodicity:* SAR less than 13

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 5.1 to 5.9 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Dorper Soil**

*Classification:* Duric Natrargids, fine, montmorillonitic, mesic

*Position on landscape:* The higher areas on summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope range:* 2 to 8 percent

*Elevation:* 4,700 to 4,900 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; pebbles, 20 percent

*Depth:* 0 to 2 inches

*Texture:* Stony very fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 2 to 6 inches

*Texture:* Very fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 6 to 14 inches

*Texture:* Clay loam

*Structure:* Prismatic

*Consistence:* Very hard, firm

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* 2 to 8 mmhos per cm

*Sodicity:* SAR 13 to 40

*Depth:* 14 to 60 inches

*Texture:* Very gravelly sandy loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR less than 13

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 4.0 to 5.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* Inset fans

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Natrargids, fine, montmorillonitic, mesic

*Position on landscape:* The higher areas on summits and shoulders of fan piedmont remnants

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Inset fans

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Jerval soil—IIIe, Dorper soil—IVs, irrigated; Jerval and Dorper soils—VIIs, nonirrigated

*Range site:* Jerval soil—027XY013NV; Dorper soil—027XY013NV; Inclusion 1—027XY013NV; Inclusion 2—027XY013NV; Inclusion 3—027XY008NV

*Classification:* Typic Camborthids, fine-loamy, mixed, mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* The higher lake plain terraces and alluvial fan remnants

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Jerval soil—IIIe, Veta soil—IVs, irrigated; Jerval and Veta soils—VIIs, nonirrigated

*Range site:* Jerval soil—027XY018NV; Veta soil—023XY038NV; Inclusion 1—027XY018NV; Inclusion 2—024XY004NV; Inclusion 3—023XY038NV

## **1260—Sojur-Phliss association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Sojur extremely channery silt loam, 15 to 50 percent slopes—60 percent

- Phliss extremely channery loam, 15 to 50 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents gravelly sandy loam, 15 to 50 percent slopes—8 percent

- Inclusion 2: Typic Torriorthents very channery loam, 15 to 50 percent slopes—5 percent

- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Sojur Soil**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from phyllite

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 4,800 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely channery silt loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 4 to 7 inches

*Texture:* Weathered bedrock

*Depth:* 7 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.2 to 0.8 inch

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Phliss Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from phyllite

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 4,800 feet

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### Typical Profile

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely channery loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 14 inches

*Texture:* Very channery loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, firm

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.2 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow

*Position on landscape:* North-facing side slopes of mountains

*Distinctive present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

#### Inclusion 2

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow

*Position on landscape:* East-, south-, and west-facing side slopes of mountains

*Distinctive present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

#### Inclusion 3

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

### Interpretive Groups

*Capability classification:* Sojur and Phliss soils—VIIs, nonirrigated

*Range site:* Sojur soil—027XY027NV; Phliss soil—027XY007NV; Inclusion 1—027XY007NV; Inclusion 2—027XY017NV; Inclusion 3—none

## 1270—Deadyon sandy loam, 4 to 8 percent slopes

### Map Unit Setting

*Position on landscape:* Summits of fan piedmont remnants

### Composition

*Major component:*

- Deadyon sandy loam, 4 to 8 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents gravelly loamy sand, 4 to 15 percent slopes—7 percent
- Inclusion 2: Aridic Argixerolls very bouldery sandy loam, 8 to 50 percent slopes—4 percent
- Inclusion 3: Deadyon very bouldery sandy loam, 4 to 15 percent slopes—3 percent
- Inclusion 4: Lithic Xeric Torriorthents very stony sandy loam, 15 to 50 percent slopes—1 percent

### Characteristics of the Deadyon Soil

*Classification:* Xerollic Haplargids, coarse-loamy, mixed, mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Granitic alluvium

*Slope range:* 4 to 8 percent

*Elevation:* 4,200 to 4,800 feet

*Dominant present vegetation:* Wyoming big sagebrush, basin wildrye, arrowleaf balsamroot

### Climatic Data

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### Typical Profile

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 5 inches  
*Texture:* Sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 5 to 22 inches  
*Texture:* Sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 22 to 28 inches  
*Texture:* Sandy loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 28 to 60 inches  
*Texture:* Gravelly loamy sand  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 4.3 to 7.7 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xeric Torriorthents, sandy, mixed, mesic  
*Position on landscape:* Inset fans and fan collars adjacent to fan piedmont remnants  
*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, basin wildrye

#### Inclusion 2

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Pediment and hill side slopes adjacent to fan piedmont remnants  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### Inclusion 3

*Classification:* Xerollic Haplargids, coarse-loamy, mixed, mesic  
*Position on landscape:* Summits of fan piedmont remnants  
*Distinctive present vegetation:* Wyoming big sagebrush, basin wildrye, arrowleaf balsamroot

#### Inclusion 4

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* Hills adjacent to the upper fan piedmont remnants  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### Interpretive Groups

*Capability classification:* Deadyon soil—IIIe, irrigated; VIIc, nonirrigated  
*Range site:* Deadyon soil—023XY040NV; Inclusion 1—024XY041NV; Inclusion 2—023XY039NV; Inclusion 3—023XY040NV; Inclusion 4—027XY008NV

## 1290—Hutchley-Terca association

### Map Unit Setting

*Position on landscape:* Mountains

### Composition

*Major components:*

- Hutchley very gravelly loam, 30 to 50 percent slopes—50 percent
  - Terca very gravelly loam, 30 to 50 percent slopes—35 percent
- Contrasting inclusions:*
- Inclusion 1: Newlands stony loam, 30 to 50 percent slopes—6 percent
  - Inclusion 2: Aridic Argixerolls very gravelly loam, 30 to 50 percent slopes—4 percent
  - Inclusion 3: Argic Lithic Cryoborolls very stony loam, 50 to 75 percent slopes—3 percent
  - Inclusion 4: Rock outcrop—2 percent

### Characteristics of the Hutchley Soil

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid  
*Position on landscape:* North-, east-, and west-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite  
*Slope range:* 30 to 50 percent  
*Elevation:* 5,400 to 7,000 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free period:* About 65 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 6 inches  
*Texture:* Very gravelly loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 to 15 inches  
*Texture:* Very gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 15 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 0.6 to 1.0 inch  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Terca Soil**

*Classification:* Lithic Argixerolls, loamy, mixed, mesic  
*Position on landscape:* South-facing back slopes and shoulders of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite  
*Slope range:* 30 to 50 percent  
*Elevation:* 5,400 to 7,000 feet  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 3 inches  
*Texture:* Very gravelly loam  
*Structure:* Granular  
*Consistence:* Soft, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 3 to 17 inches  
*Texture:* Gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Hard, firm  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 17 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 14 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.3 to 1.8 inches  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Argic Cryoborolls, fine-loamy, mixed  
*Position on landscape:* North-facing, concave side slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

**Inclusion 2**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing, concave back slopes of mountains

*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

**Inclusion 3**

*Classification:* Argic Lithic Cryoborolls, loamy-skeletal, mixed

*Position on landscape:* North-facing back slopes of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

**Inclusion 4**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Hutchley and Terca soils—VIIs, nonirrigated

*Range site:* Hutchley soil—023XY008NV; Terca soil—023XY039NV; Inclusion 1—023XY007NV; Inclusion 2—023XY016NV; Inclusion 3—023XY017NV; Inclusion 4—none

**1310—Hooplite-Singatse association**

**Map Unit Setting**

*Position on landscape:* Hills

**Composition**

*Major components:*

- Hooplite very stony loam, 15 to 50 percent slopes—70 percent
- Singatse very gravelly sandy loam, 15 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xeric Torriorthents very stony loam, 15 to 50 percent slopes—5 percent
- Inclusion 2: Rock outcrop—5 percent
- Inclusion 3: Lithic Torriorthents very gravelly clay, 8 to 30 percent slopes—3 percent
- Inclusion 4: Xeric Torriorthents very gravelly loamy sand, 2 to 8 percent slopes—2 percent

**Characteristics of the Hooplite Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Shoulders and back slopes of hills

*Parent material:* Residuum and colluvium derived from rhyolitic tuff

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Black sagebrush, Sandberg bluegrass

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 20 percent; pebbles, 35 percent

*Depth:* 0 to 3 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 8 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 6 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.7 to 1.2 inches

*Water-supplying capacity:* 8 to 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Singatse Soil**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower, south-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from rhyolitic tuff

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 1 inch

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 1 to 6 inches

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 6 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.3 to 0.6 inch

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Shoulders and back slopes of hills

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Inclusion 2**

*Position on landscape:* Crests and side slopes of hills

*Distinctive present vegetation:* None

#### **Inclusion 3**

*Classification:* Lithic Torriorthents, clayey, montmorillonitic (calcareous), mesic

*Position on landscape:* Shoulders and toe slopes of hills

*Distinctive present vegetation:* Shadscale, desert needlegrass

#### **Inclusion 4**

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Channels adjacent to toe slopes of hills

*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

### **Interpretive Groups**

*Capability classification:* Hooplite and Singatse soils—VIIs, nonirrigated

*Range site:* Hooplite soil—027XY032NV; Singatse soil—027XY027NV; Inclusion 1—023XY039NV; Inclusion 2—none; Inclusion 3—027XY027NV; Inclusion 4—027XY029NV

## **1320—Jaybee-Theon-Singatse association**

### **Map Unit Setting**

*Position on landscape:* Hills

### **Composition**

*Major components:*

- Jaybee very cobbly loam, 4 to 30 percent slopes—50 percent
  - Theon very gravelly loam, 4 to 30 percent slopes—25 percent
  - Singatse very stony sandy loam, 30 to 50 percent slopes—10 percent
- Contrasting inclusions:*
- Inclusion 1: Rubble land—4 percent
  - Inclusion 2: Xeric Torriorthents very gravelly loam, 30 to 50 percent slopes—4 percent
  - Inclusion 3: Bombadil very gravelly loam, 8 to 30 percent slopes—4 percent
  - Inclusion 4: Theon very gravelly loam, 15 to 50 percent slopes—3 percent

### **Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* The upper and lower, north-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 30 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches

*Texture:* Very cobbly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches

*Texture:* Gravelly clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 14 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 7 to 14 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.7 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Theon Soil**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* The lower, south-, east-, and west-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 4 to 30 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 2 to 11 inches

*Texture:* Very gravelly loam, very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 11 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 8 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Singatse Soil**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower side slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,300 to 5,000 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 12 percent; cobbles, 25 percent; pebbles, 40 percent

*Depth:* 0 to 1 inch

*Texture:* Very stony sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 1 to 6 inches

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.3 to 0.6 inch

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Side slopes of hills

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* North-facing back slopes of hills at the higher elevations

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* North-facing side slopes of hills at the lower elevations

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Inclusion 4**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* The lower side slopes of hills

*Distinctive present vegetation:* Shadscale, Bailey greasewood, bottlebrush squirreltail, desert needlegrass

### **Interpretive Groups**

*Capability classification:* Jaybee, Theon, and Singatse soils—VIIs, irrigated

*Range site:* Jaybee soil—023XY047NV; Theon soil—027XY013NV; Singatse soil—027XY027NV; Inclusion 1—none; Inclusion 2—023XY047NV; Inclusion 3—023XY006NV; Inclusion 4—027XY019NV

### **1340—Phing stony sandy loam, 2 to 8 percent slopes**

#### **Map Unit Setting**

*Position on landscape:* Summits of fan piedmont remnants

#### **Composition**

*Major component:*

- Phing stony sandy loam, 2 to 8 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Veta very gravelly sandy loam, 2 to 8 percent slopes—7 percent
- Inclusion 2: Verdico very gravelly sandy loam, 4 to 30 percent slopes—3 percent

**Characteristics of the Phing Soil**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,400 to 5,400 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 10 percent; pebbles, 50 percent

*Depth:* 0 to 7 inches

*Texture:* Stony sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 7 to 20 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 20 to 60 inches

*Texture:* Stratified extremely gravelly sand to gravelly loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.0 to 4.0 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Fan aprons and inset fans adjacent to summits of fan piedmont remnants

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Xerollic Paleargids, fine, montmorillonitic, mesic

*Position on landscape:* Side slopes of fan piedmont remnants

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Phing soil—VIIIs, nonirrigated

*Range site:* Phing soil—023XY047NV; Inclusion 1—023XY038NV; Inclusion 2—023XY047NV

**1360—Mastly-Mazuma association****Map Unit Setting**

*Position on landscape:* Stream terraces and lake plain terraces

**Composition**

*Major components:*

- Mastly very fine sandy loam, 0 to 2 percent slopes—50 percent
- Mazuma fine sandy loam, 0 to 4 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Zorravista fine sand, 2 to 8 percent slopes—7 percent
- Inclusion 2: Mazuma loamy sand, 0 to 4 percent slopes—6 percent
- Inclusion 3: Xeric Torrifluvents gravelly sandy loam, 0 to 2 percent slopes—2 percent

**Characteristics of the Mastly Soil**

*Classification:* Durorthidic Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Stream terraces

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

**Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 6 inches  
*Texture:* Very fine sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 6 to 60 inches  
*Texture:* Stratified sand to very fine sandy loam  
*Structure:* Platy or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—occasional; duration—very brief; months—December through August  
*Permeability:* Moderately slow  
*Available water capacity:* 7.9 to 9.1 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

**Characteristics of the Mazuma Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The slightly higher lake plain terraces  
*Parent material:* Loamy lacustrine material  
*Slope range:* 0 to 4 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

**Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Fine sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 13 to 23

*Depth:* 8 to 30 inches  
*Texture:* Sandy loam, fine sandy loam  
*Structure:* Subangular blocky or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline or very strongly alkaline  
*Salinity:* More than 8 mmhos per cm  
*Sodicity:* SAR 13 to 36

*Depth:* 30 to 60 inches  
*Texture:* Stratified silt loam to sand  
*Structure:* Platy, single grained, or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline to very strongly alkaline  
*Salinity:* More than 2 mmhos per cm  
*Sodicity:* SAR 13 to 36

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.2 to 8.4 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Xeric Torripsamments, mixed, mesic  
*Position on landscape:* Dunes superimposed on lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush, spiny hopsage, Indian ricegrass

**Inclusion 2**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Thin sand sheets superimposed on lake plain terraces  
*Distinctive present vegetation:* Black greasewood, Nevada dalea, Indian ricegrass

**Inclusion 3**

*Classification:* Xeric Torrfluvents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Stream terraces

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

**Interpretive Groups**

*Capability classification:* Mostly soil—IIw, irrigated;

Mostly soil—VIIw, Mazuma soil—VIIs, nonirrigated

*Range site:* Mostly soil—024XY006NV; Mazuma soil—024XY003NV; Inclusion 1—023XY011NV; Inclusion 2—027XY012NV; Inclusion 3—024XY006NV

**1370—Theon-Jaybee association****Map Unit Setting**

*Position on landscape:* Hills

**Composition**

*Major components:*

- Theon very stony loam, 15 to 50 percent slopes—70 percent
- Jaybee very cobbly loam, 30 to 50 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids gravelly sandy loam, 15 to 30 percent slopes—5 percent
- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Fireball very cobbly loam, 8 to 30 percent slopes—3 percent
- Inclusion 4: Trocken very gravelly loam, 2 to 15 percent slopes—3 percent

**Characteristics of the Theon Soil**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-, east-, and west-facing shoulders and back slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Shadscale, Bailey greasewood, bottlebrush squirreltail, desert needlegrass

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

**Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 2 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 2 to 11 inches

*Texture:* Very gravelly loam, very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 11 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 8 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Jaybee Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic

*Position on landscape:* North-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 30 to 50 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

**Typical Profile**

*Surface cover:* Cobbles, 30 percent; pebbles, 20 percent

*Depth:* 0 to 8 inches  
*Texture:* Very cobbly loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 14 inches  
*Texture:* Gravelly clay  
*Structure:* Prismatic  
*Consistence:* Hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 0.9 to 1.7 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xerollic Haplargids, fine-loamy, mixed, mesic  
*Position on landscape:* North-facing toe slopes of hills  
*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### Inclusion 2

*Position on landscape:* Crests and side slopes of hills  
*Distinctive present vegetation:* None

#### Inclusion 3

*Classification:* Typic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Toe slopes of hills  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Inclusion 4

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Alluvial fans adjacent to toe slopes of hills  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Interpretive Groups

*Capability classification:* Theon and Jaybee soils—VIIIs, nonirrigated  
*Range site:* Theon soil—027XY019NV; Jaybee soil—023XY047NV; Inclusion 1—023XY047NV; Inclusion 2—none; Inclusion 3—027XY013NV; Inclusion 4—027XY013NV

## 1372—Theon-Old Camp association

### Map Unit Setting

*Position on landscape:* Hills

### Composition

*Major components:*

- Theon very gravelly loam, 15 to 50 percent slopes—50 percent
- Old Camp very gravelly loam, 15 to 50 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Torriorthents very gravelly sandy loam, 15 to 50 percent slopes—7 percent
- Inclusion 2: Typic Haplargids very gravelly sandy loam, 4 to 15 percent slopes—4 percent
- Inclusion 3: Xeric Torriorthents very gravelly loamy sand, 0 to 4 percent slopes—3 percent
- Inclusion 4: Rock outcrop—1 percent

### Characteristics of the Theon Soil

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing side slopes of hills

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 15 to 50 percent

*Elevation:* 4,400 to 5,300 feet

*Dominant present vegetation:* Shadscale, Bailey greasewood, bottlebrush squirreltail, desert needlegrass

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

### Typical Profile

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly loam

*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 2 to 10 inches  
*Texture:* Very gravelly loam, very gravelly clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 10 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 8 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 0.6 to 1.0 inch  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Old Camp Soil**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* North-facing side slopes of hills  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 15 to 50 percent  
*Elevation:* 4,400 to 5,500 feet  
*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent  
*Depth:* 0 to 2 inches  
*Texture:* Very gravelly loam

*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 14 inches  
*Texture:* Very stony clay loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 14 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 10 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 2.0 inches  
*Water-supplying capacity:* 8 to 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* South-facing side slopes of hills  
*Distinctive present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

##### **Inclusion 2**

*Classification:* Typic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Toe slopes of hills  
*Distinctive present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

##### **Inclusion 3**

*Classification:* Xeric Torriorthents, loamy, skeletal, mixed (calcareous), mesic  
*Position on landscape:* Channels adjacent to toe slopes of hills  
*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

**Inclusion 4**

*Position on landscape:* Crests and side slopes of hills

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Theon and Old Camp soils—Vlls, nonirrigated

*Range site:* Theon soil—027XY019NV; Old Camp soil—027XY007NV; Inclusion 1—027XY017NV; Inclusion 2—027XY018NV; Inclusion 3—027XY029NV; Inclusion 4—none

**1373—Theon-Trocken-Singatse association****Map Unit Setting**

*Position on landscape:* Hills and lake terraces

**Composition**

*Major components:*

- Theon very gravelly loam, 15 to 30 percent slopes—40 percent
- Trocken gravelly sandy loam, 4 to 15 percent slopes—25 percent
- Singatse very gravelly sandy loam, 30 to 50 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Old Camp very gravelly sandy loam, 15 to 50 percent slopes—7 percent
- Inclusion 2: Smaug very fine sandy loam, 2 to 8 percent slopes—5 percent
- Inclusion 3: Rock outcrop—3 percent

**Characteristics of the Theon Soil**

*Classification:* Lithic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Shoulders of hills

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 15 to 30 percent

*Elevation:* 4,000 to 4,800 feet

*Dominant present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

**Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 2 inches

*Texture:* Very gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 2 to 11 inches

*Texture:* Very gravelly loam, very gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 11 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 8 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.0 inch

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Lake terraces

*Parent material:* Mixed alluvium

*Slope range:* 4 to 15 percent

*Elevation:* 4,000 to 4,400 feet

*Dominant present vegetation:* Bailey greasewood, shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Gravelly sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches  
*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* 2 to 4 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 3.0 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight

*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic  
*Position on landscape:* North-facing side slopes of hills  
*Distinctive present vegetation:* Wyoming big sagebrush, green ephedra, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic  
*Position on landscape:* The lower lake terraces  
*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

##### **Inclusion 3**

*Position on landscape:* Crests and side slopes of hills  
*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Theon, Trocken, and Singatse soils—VIIIs, irrigated  
*Range site:* Theon soil—027XY017NV; Trocken soil—027XY018NV; Singatse soil—027XY027NV; Inclusion 1—026XY022NV; Inclusion 2—024XY004NV; Inclusion 3—none

**1392—Ninemile-Newlands association****Map Unit Setting**

*Position on landscape:* Plateaus

**Composition**

*Major components:*

- Ninemile very stony loam, 4 to 15 percent slopes—65 percent
- Newlands stony loam, 4 to 15 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Argixerolls very stony sandy loam, 4 to 15 percent slopes—9 percent
- Inclusion 2: Lithic Xerollic Haplargids extremely stony clay loam, 2 to 15 percent slopes—3 percent
- Inclusion 3: Rock outcrop—2 percent
- Inclusion 4: Cumulic Cryoborolls loam, 4 to 30 percent slopes—1 percent

**Characteristics of the Ninemile Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, frigid

*Position on landscape:* Summits and shoulders of plateaus

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 4 to 15 percent

*Elevation:* 6,200 to 7,300 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

**Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free period:* About 75 days

**Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 20 percent; pebbles, 15 percent

*Depth:* 0 to 3 inches

*Texture:* Very stony loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 12 inches

*Texture:* Clay, gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 1.4 to 2.8 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Characteristics of the Newlands Soil**

*Classification:* Argic Cryoborolls, fine-loamy, mixed

*Position on landscape:* Side slopes of plateaus

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 4 to 15 percent

*Elevation:* 6,200 to 7,300 feet

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

**Climatic Data**

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free period:* About 60 days

**Typical Profile**

*Surface cover:* Stones and boulders, 2 percent; cobbles, 5 percent; pebbles, 10 percent

*Depth:* 0 to 8 inches

*Texture:* Stony loam

*Structure:* Granular

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 45 inches

*Texture:* Clay loam, gravelly clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 45 inches

*Texture:* Unweathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 6.4 to 9.6 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, frigid

*Position on landscape:* Summits and shoulders of plateaus

*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush, bluebunch wheatgrass

#### Inclusion 2

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, frigid

*Position on landscape:* Summits and shoulders of plateaus

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

#### Inclusion 3

*Position on landscape:* Rims of plateaus

*Distinctive present vegetation:* None

#### Inclusion 4

*Classification:* Cumulic Cryoborolls, loamy-skeletal, mixed

*Position on landscape:* North- and east-facing toe slopes of plateaus below areas of rimrock

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

### Interpretive Groups

*Capability classification:* Ninemile and Newlands soils—VIIs, nonirrigated

*Range site:* Ninemile soil—023XY017NV; Newlands soil—023XY007NV; Inclusion 1—023XY015NV; Inclusion 2—023XY008NV; Inclusion 3—none; Inclusion 4—023XY028NV

## 1401—Dedmount-Umberland association

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major components:*

- Dedmount silt loam, 0 to 2 percent slopes—50 percent
- Umberland silty clay loam, 0 to 2 percent slopes—35 percent

*Contrasting inclusions:*

- Inclusion 1: Aquic Haploxerolls loam, 0 to 2 percent slopes—6 percent
- Inclusion 2: Veta gravelly fine sandy loam, 2 to 8 percent slopes—4 percent
- Inclusion 3: Umberland loam, 0 to 2 percent slopes—3 percent
- Inclusion 4: Swingler loam, 0 to 2 percent slopes—2 percent

### Characteristics of the Dedmount Soil

*Classification:* Aquic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Mixed alluvium and lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

### Climatic Data

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 2 inches

*Texture:* Silt loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 2 to 60 inches

*Texture:* Silty clay loam, silty clay

*Structure:* Massive or angular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline or very strongly alkaline

*Salinity:* 2 to 8 mmhos per cm

*Sodicity:* SAR 25 to 50

### Soil and Water Features

*Depth to a seasonal high water table:* 48 to 72 inches

*Frequency of flooding:* Rare

*Permeability:* Slow  
*Available water capacity:* 10.0 to 12.0 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Characteristics of the UMBERLAND SOIL**

*Classification:* Aerlic Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Inland saltgrass

### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 5 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 5 to 60 inches  
*Texture:* Silty clay loam, silty clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 68

### **Soil and Water Features**

*Seasonal high water table:* 12 inches above to 30 inches below the surface  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 14 to 16 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aquic Haploxerolls, fine, montmorillonitic, mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Sedges, rush

#### **Inclusion 2**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans adjacent to lake plain terraces

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Aerlic Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Dissected lake plain terraces

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### **Inclusion 4**

*Classification:* Typic Torriorthents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Interpretive Groups**

*Capability classification:* Dedmount soil—VII<sub>s</sub>, nonirrigated; UMBERLAND soil—VII<sub>w</sub>, nonirrigated

*Range site:* Dedmount soil—024XY006NV; UMBERLAND soil—026XY002NV; Inclusion 1—none; Inclusion 2—023XY038NV; Inclusion 3—023XY005NV; Inclusion 4—024XY003NV

## **1410—Juva loam**

### **Map Unit Setting**

*Position on landscape:* Alluvial fans

### **Composition**

*Major component:*

- Juva loam, 0 to 2 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torrifluents sandy loam, 0 to 2 percent slopes—8 percent

- Inclusion 2: Slaw silt loam, 0 to 2 percent slopes—5 percent

- Inclusion 3: Typic Torrifluents gravelly loamy sand, 0 to 2 percent slopes—2 percent

### **Characteristics of the Juva Soil**

*Classification:* Typic Torrfluvents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 4,000 to 4,200 feet

*Dominant present vegetation:* Alfalfa

#### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Loam

*Structure:* Granular

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 65 inches

*Texture:* Stratified sand to silt loam

*Structure:* Single grained or massive

*Consistence:* Slightly hard, friable

*Reaction:* Moderately alkaline or strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR 13 to 30

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Flooding:* Frequency—occasional; duration—very brief; months—June through September

*Permeability:* Moderately rapid

*Available water capacity:* 4.7 to 6.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—moderate

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torrfluvents, sandy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans

*Distinctive present vegetation:* Alfalfa

#### **Inclusion 2**

*Classification:* Typic Torrfluvents, fine-silty, mixed (calcareous), mesic

*Position on landscape:* Alluvial flats

*Distinctive present vegetation:* Alfalfa

#### **Inclusion 3**

*Classification:* Typic Torrfluvents, sandy-skeletal, mixed, mesic

*Position on landscape:* Stream terrace remnants adjacent to alluvial fans

*Distinctive present vegetation:* Alfalfa

### **Interpretive Groups**

*Capability classification:* Juva soil—IIw, irrigated; VIIw, nonirrigated

*Range site:* Juva soil—none; Inclusion 1—none; Inclusion 2—none; Inclusion 3—none

## **1420—Perwaso complex**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

### **Composition**

*Major components:*

- Perwaso silt loam, 0 to 2 percent slopes, occasionally flooded—50 percent

- Perwaso silt loam, 0 to 2 percent slopes, rarely flooded—35 percent

*Contrasting inclusions:*

- Inclusion 1: Juva loam, 0 to 2 percent slopes—6 percent

- Inclusion 2: Slow silty clay loam, 0 to 2 percent slopes—6 percent

- Inclusion 3: Perwaso gravelly loam, 0 to 2 percent slopes—3 percent

### **Characteristics of the Occasionally Flooded Perwaso Soil**

*Classification:* Typic Torrfluvents, fine-loamy over sandy or sandy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The slightly lower alluvial flats

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 3,980 to 4,440 feet

*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 3 inches

*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 30 to 50

*Depth:* 3 to 36 inches  
*Texture:* Stratified silt loam to sandy clay loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 30

*Depth:* 36 to 60 inches  
*Texture:* Gravelly loamy coarse sand  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 30 to 50

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—occasional; duration—very brief or brief; months—December through May  
*Permeability:* Moderate  
*Available water capacity:* 6.8 to 8.0 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* Steel—high; concrete—moderate  
*Potential for frost action:* Low

#### **Characteristics of the Rarely Flooded Perwaso Soil**

*Classification:* Typic Torrifluvents, fine-loamy over sandy or sandy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* The slightly higher alluvial flats  
*Parent material:* Mixed alluvium  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,980 to 4,440 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 3 inches  
*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR 30 to 50

*Depth:* 3 to 36 inches  
*Texture:* Stratified silt loam to sandy clay loam  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 30

*Depth:* 36 to 60 inches  
*Texture:* Gravelly loamy coarse sand  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR 30 to 50

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare

## 1440—Umberland silty clay loam

### Map Unit Setting

*Position on landscape:* Lake plain terraces

### Composition

*Major component:*

- Umberland silty clay loam, 0 to 2 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Halaquepts silt loam, 0 to 2 percent slopes—7 percent
- Inclusion 2: Umberland silty clay loam, 0 to 2 percent slopes, ponded—5 percent
- Inclusion 3: Umberland silty clay loam, 0 to 2 percent slopes—3 percent

### Characteristics of the Umberland Soil

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Rubber rabbitbrush, black greasewood, inland saltgrass

### Climatic Data

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 15 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 15 to 60 inches  
*Texture:* Silty clay  
*Structure:* Subangular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 23

### Soil and Water Features

*Depth to a seasonal high water table:* 30 to 60 inches  
*Flooding:* Frequency—occasional; duration—long; months—December through June  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Halaquepts, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* The lower lake plain terraces adjacent to hot springs

*Distinctive present vegetation:* Black greasewood, inland saltgrass, Baltic rush

#### **Inclusion 2**

*Classification:* Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Distinctive present vegetation:* Inland saltgrass

#### **Inclusion 3**

*Classification:* Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The higher lake plain terraces

*Distinctive present vegetation:* Torrey quailbush, black greasewood, basin wildrye

### **Interpretive Groups**

*Capability classification:* Umberland soil—VIIw, nonirrigated

*Range site:* Umberland soil—024XY007NV; Inclusion 1—027XY005NV; Inclusion 2—026XY002NV; Inclusion 3—024XY015NV

## **1442—Umberland-Benin association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major components:*

- Umberland silt loam, 0 to 2 percent slopes—55 percent
  - Benin silt loam, 0 to 2 percent slopes—35 percent
- Contrasting inclusions:*
- Inclusion 1: Cumulic Haploxerolls silt loam, 0 to 4 percent slopes—6 percent
  - Inclusion 2: Fluvaquents loam, 0 to 4 percent slopes—2 percent
  - Inclusion 3: Mazuma fine sandy loam, 0 to 2 percent slopes—2 percent

### **Characteristics of the Umberland Soil**

*Classification:* Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The lower lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Rubber rabbitbrush, black greasewood, inland saltgrass

### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 15 inches

*Texture:* Silt loam

*Structure:* Massive

*Consistence:* Hard, very friable

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 15 to 60 inches

*Texture:* Silty clay

*Structure:* Subangular blocky

*Consistence:* Very hard, firm

*Reaction:* Strongly alkaline

*Salinity:* More than 4 mmhos per cm

*Sodicity:* SAR more than 23

### **Soil and Water Features**

*Depth to a seasonal high water table:* 30 to 60 inches

*Flooding:* Frequency—occasional; duration—long; months—December through June

*Permeability:* Very slow

*Available water capacity:* 9.2 to 12.5 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* High

### **Characteristics of the Benin Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The upper lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Black greasewood, inland saltgrass, basin wildrye

### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Silt loam  
*Structure:* Massive  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* 8 to 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 8 to 70 inches  
*Texture:* Silty clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Very hard, very firm  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm  
*Sodicity:* SAR more than 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very slow  
*Available water capacity:* 9.0 to 9.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Cumulic Haploxerolls  
*Position on landscape:* Stream terraces cut into lake plain terraces  
*Distinctive present vegetation:* Black greasewood, shadscale, inland saltgrass, basin wildrye

##### **Inclusion 2**

*Classification:* Fluvaquents  
*Position on landscape:* Stream channels cut into lake plain terraces  
*Distinctive present vegetation:* Willow, cottonwood, basin big sagebrush

##### **Inclusion 3**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Alluvial flats adjacent to lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Interpretive Groups**

*Capability classification:* Benin soil—IVs, irrigated; Umberland soil—VIIw, Benin soil—VIIs, nonirrigated

*Range site:* Umberland soil—024XY007NV; Benin soil—024XY011NV; Inclusion 1—027XY006NV; Inclusion 2—023XY034NV; Inclusion 3—024XY002NV

### **1443—Umberland-Ragtown association**

#### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

#### **Composition**

*Major components:*

- Umberland silt loam, 0 to 2 percent slopes—45 percent
- Ragtown silt loam, 0 to 2 percent slopes—30 percent
- Umberland silty clay loam, ponded, 0 to 2 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Playas—8 percent
- Inclusion 2: Typic Haplaquolls loam, 0 to 2 percent slopes—2 percent

#### **Characteristics of Umberland Silt Loam**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* The higher lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 15 inches

*Texture:* Silt loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Very strongly alkaline

*Salinity:* More than 16 mmhos per cm

*Sodicity:* SAR more than 68

*Depth:* 15 to 60 inches

*Texture:* Silty clay loam, silty clay

*Structure:* Angular blocky

*Consistence:* Very hard, firm

*Reaction:* Strongly alkaline

*Salinity:* More than 4 mmhos per cm

*Sodicity:* SAR more than 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* 30 to 60 inches

*Frequency of flooding:* Rare  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Characteristics of the Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The middle lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 10 inches  
*Texture:* Silt loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 4 to 8 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 10 to 16 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 16 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

### **Characteristics of the Poned Umberland Soil**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Inland saltgrass

### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 5 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, very friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 5 to 60 inches  
*Texture:* Silty clay loam, silty clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 68

### **Soil and Water Features**

*Seasonal high water table:* 12 inches above to 30 inches below the surface  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 14 to 16 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave area on lake plain terraces

*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Typic Haplaquolls, fine-loamy, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces adjacent to seeps

*Distinctive present vegetation:* Sedge, rush

### **Interpretive Groups**

*Capability classification:* Umberland soils—VIIw, nonirrigated; Ragtown soil—VII, nonirrigated

*Range site:* Umberland silt loam—024XY015NV; Ragtown soil—027XY025NV; the ponded Umberland soil—026XY002NV; Inclusion 1—none; Inclusion 2—027XY004NV

## **1444—Umberland silty clay loam, ponded**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces

### **Composition**

*Major component:*

- Umberland silty clay loam, 0 to 2 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Ragtown silty clay loam, 0 to 2 percent slopes—6 percent
- Inclusion 2: Aquic Torriorthents silty clay loam, 0 to 2 percent slopes—4 percent

### **Characteristics of the Umberland Soil**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Parent material:* Lacustrine sediments

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Iodinebush, inland saltgrass

### **Climatic Data**

*Average annual precipitation:* About 6 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 5 inches

*Texture:* Silty clay loam

*Structure:* Massive

*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Torrey quailbush, black greasewood, basin wildrye

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 15 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 15 to 60 inches  
*Texture:* Silty clay loam, silty clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 23

#### **Soil and Water Features**

*Depth to a seasonal high water table:* 30 to 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 12 to 14 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

#### **Characteristics of the Ponded UMBERLAND Soil**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces and flood plains  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,900 to 4,000 feet  
*Dominant present vegetation:* Inland saltgrass

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 6 inches  
*Texture:* Silty clay loam  
*Structure:* Massive  
*Consistence:* Hard, friable  
*Reaction:* Very strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 6 to 60 inches  
*Texture:* Silty clay loam, silty clay  
*Structure:* Angular blocky  
*Consistence:* Very hard, firm  
*Reaction:* Strongly alkaline  
*Salinity:* More than 4 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Seasonal high water table:* 12 inches above to 30 inches below the surface  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 9.2 to 12.5 inches  
*Water-supplying capacity:* 14 to 16 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* High

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Aquic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Thin sand sheets superimposed on lake plain terraces  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

##### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* The highest lake plain terraces  
*Distinctive present vegetation:* Black greasewood, sagebrush, basin wildrye

##### **Inclusion 3**

*Classification:* Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Flood plains and lake plain terraces adjacent to seeps  
*Distinctive present vegetation:* Rubber rabbitbrush, black greasewood, inland saltgrass

##### **Inclusion 4**

*Position on landscape:* The lowest part of lake plain terraces  
*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Dedmount soil—VIIs, nonirrigated; Umlerland soils—VIIw, nonirrigated  
*Range site:* Dedmount soil—024XY006NV; the unponded Umlerland soil—024XY015NV; the

ponded Umlerland soil—026XY002NV; Inclusion 1—024XY006NV; Inclusion 2—024XY022NV; Inclusion 3—024XY007NV; Inclusion 4—none

### **1460—Chalco association**

#### **Map Unit Setting**

*Position on landscape:* Rock pediment remnants

#### **Composition**

##### *Major components:*

- Chalco very gravelly loam, 4 to 30 percent slopes—60 percent
  - Chalco very gravelly loam, dry, 8 to 30 percent slopes—30 percent

- Inclusion 1: Chalco very stony loam, 30 to 50 percent slopes—7 percent
  - Inclusion 2: Pickup cobbly loam, 30 to 50 percent slopes—2 percent
  - Inclusion 3: Rock outcrop—1 percent

#### **Characteristics of the Chalco Soil**

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* Summits and north-facing side slopes of rock pediment remnants

*Parent material:* Residuum and colluvium derived from tuff

*Slope range:* 4 to 30 percent

*Elevation:* 4,400 to 5,600 feet

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 3 inches

*Texture:* Very gravelly loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 3 to 15 inches

*Texture:* Clay

*Structure:* Angular blocky

*Consistence:* Very hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 15 to 30 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 10 to 20 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 1.3 to 2.6 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

#### **Characteristics of the Dry Chalco Soil**

*Classification:* Xerollic Haplargids, clayey, montmorillonitic, mesic, shallow

*Position on landscape:* South-facing side slopes of rock pediment remnants

*Parent material:* Residuum and colluvium derived from tuff

*Slope range:* 8 to 30 percent

*Elevation:* 4,400 to 5,600 feet

*Dominant present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

#### **Climatic Data**

*Classification:* Pachic Haploxerolls, coarse-loamy, mixed, frigid

*Position on landscape:* North-facing back slopes of mountains

*Parent material:* Colluvium derived from granite and eolian material

*Slope range:* 30 to 50 percent

*Elevation:* 4,800 to 7,800 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

**Climatic Data**

*Average annual precipitation:* About 13 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free period:* About 60 days

**Typical Profile**

*Surface cover:* Stones and boulders, 3 percent; cobbles, 5 percent; pebbles, 10 percent

*Depth:* 0 to 12 inches

*Texture:* Stony loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 12 to 60 inches

*Texture:* Gravelly coarse sandy loam

*Structure:* Massive

*Consistence:* Slightly hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 60 to 80 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 5.4 to 6.6 inches

*Water-supplying capacity:* 12 to 14 inches

*Runoff:* Very rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

#### Inclusion 2

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Crests and shoulders of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

#### Inclusion 3

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* South-facing back slopes of mountains, adjacent to rock outcrop

*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush

#### Inclusion 4

*Classification:* Cumulic Cryoborolls, loamy-skeletal, mixed

*Position on landscape:* Stream terraces and seeps

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

### Interpretive Groups

*Capability classification:* Eaglerock and Wagore soils—Vlls, nonirrigated

*Range site:* Eaglerock soil—023XY016NV; Wagore soil—023XY041NV; Inclusion 1—none; Inclusion 2—023XY031NV; Inclusion 3—023XY016NV; Inclusion 4—023XY028NV

## 1490—Berit-Deanran-Rock outcrop association

### Map Unit Setting

*Position on landscape:* Mountains

### Composition

*Major components:*

- Berit extremely bouldery sandy loam, 50 to 75 percent slopes—45 percent

- Deanran extremely bouldery sandy loam, 50 to 75 percent slopes—30 percent

- Rock outcrop—10 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents stony sandy loam, 50 to 75 percent slopes—6 percent

- Inclusion 2: Torriorthentic Haploxerolls very stony sandy loam, 50 to 75 percent slopes—4 percent

- Inclusion 3: Lithic Argixerolls extremely stony clay, 4 to 30 percent slopes—3 percent

- Inclusion 4: Noslo very stony coarse sandy loam, 50 to 75 percent slopes—2 percent

### Characteristics of the Berit Soil

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic, shallow

*Position on landscape:* South- and west-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 50 to 75 percent

*Elevation:* 4,800 to 7,200 feet

*Dominant present vegetation:* Utah juniper, purple sage, mountain big sagebrush

### Climatic Data

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### Typical Profile

*Surface cover:* Stones and boulders, 20 percent; cobbles, 10 percent; pebbles, 25 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely bouldery sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 11 inches

*Texture:* Very gravelly sandy clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 11 to 21 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 4 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.3 to 0.9 inch  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Very rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Deanran Soil**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid, shallow  
*Position on landscape:* North- and east-facing back slopes of mountains  
*Parent material:* Residuum and colluvium derived from granite  
*Slope range:* 50 to 75 percent  
*Elevation:* 5,400 to 8,000 feet  
*Dominant present vegetation:* Utah juniper, purple sage, mountain big sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 43 degrees F  
*Frost-free period:* About 70 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 20 percent; cobbles, 5 percent; pebbles, 15 percent  
*Depth:* 0 to 4 inches  
*Texture:* Extremely bouldery sandy loam  
*Structure:* Subangular blocky  
*Consistence:* Soft, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2  
*Depth:* 4 to 8 inches  
*Texture:* Very gravelly sandy clay loam  
*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 8 to 21 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 7 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.5 to 1.0 inch  
*Water-supplying capacity:* 10 to 12 inches  
*Runoff:* Very rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Rock Outcrop**

*Position on landscape:* Back slopes of mountains  
*Kind of rock:* Granite

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic, shallow  
*Position on landscape:* Steep, south-facing back slopes of mountains  
*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

##### **Inclusion 2**

*Classification:* Torriorthentic Haploxerolls, loamy-skeletal, mixed, frigid, shallow  
*Position on landscape:* North-facing back slopes of mountains  
*Distinctive present vegetation:* Utah juniper, purple sage, mountain big sagebrush

##### **Inclusion 3**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, mesic  
*Position on landscape:* Crests and shoulders of mountains at the higher elevations  
*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Utah juniper

##### **Inclusion 4**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* Shoulders and back slopes of mountains at the lower elevations

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Interpretive Groups**

*Capability classification:* Berit and Deanran soils—VIIIs, nonirrigated; Rock outcrop—VIIIs

*Range site:* Berit soil—023XY036NV; Deanran soil—023XY036NV; Rock outcrop—none; Inclusion 1—023XY030NV; Inclusion 2—023XY036NV; Inclusion 3—023XY035NV; Inclusion 4—023XY039NV

## **1491—Berit-Noslo-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Berit extremely bouldery sandy loam, 50 to 75 percent slopes—50 percent
- Noslo extremely bouldery sandy loam, 30 to 50 percent slopes—30 percent
- Rock outcrop—10 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls very stony loam, 4 to 30 percent slopes—6 percent
- Inclusion 2: Slocave bouldery coarse sandy loam, 30 to 75 percent slopes—2 percent
- Inclusion 3: Greenbrae stony sandy loam, 4 to 15 percent slopes—2 percent

### **Characteristics of the Berit Soil**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic, shallow

*Position on landscape:* South-, east-, and west-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 50 to 75 percent

*Elevation:* 4,800 to 6,300 feet

*Dominant present vegetation:* Utah juniper, purple sage, mountain big sagebrush

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 20 percent; cobbles, 10 percent; pebbles, 25 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely bouldery sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 11 inches

*Texture:* Very gravelly sandy clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 11 to 21 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.3 to 0.9 inch

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Noslo Soil**

*Classification:* Aridic Argixerolls, fine-loamy, mixed, mesic

*Position on landscape:* North-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 50 percent

*Elevation:* 4,800 to 6,300 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 35 percent; cobbles, 5 percent; pebbles, 10 percent

*Depth:* 0 to 13 inches

*Texture:* Extremely bouldery sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 13 to 30 inches

*Texture:* Sandy clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 30 inches

*Texture:* Weathered bedrock

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.0 to 4.0 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### Characteristics of the Rock Outcrop

*Position on landscape:* Back slopes of mountains

*Kind of rock:* Granite

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Aridic Argixerolls, loamy, mixed, mesic, shallow

*Position on landscape:* Crests and shoulders of mountains

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

#### Inclusion 2

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow

*Position on landscape:* The lower, south-facing back slopes of mountains

*Distinctive present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

#### Inclusion 3

*Classification:* Xerollic Haplargids, fine-loamy, mixed, mesic

*Position on landscape:* Alluvial fans adjacent to toe slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

### Interpretive Groups

*Capability classification:* Berit and Noslo soils—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Berit soil—023XY036NV; Noslo soil—023XY039NV; Rock outcrop—none; Inclusion 1—023XY037NV; Inclusion 2—027XY017NV; Inclusion 3—023XY020NV

### 1500—Hastee-Granipeak-Rock outcrop association

#### Map Unit Setting

*Position on landscape:* Mountains

#### Composition

*Major components:*

- Hastee extremely bouldery coarse sandy loam, 50 to 75 percent slopes—45 percent
- Granipeak extremely bouldery coarse sandy loam, 30 to 50 percent slopes—30 percent
- Rock outcrop—10 percent

*Contrasting inclusions:*

- Inclusion 1: Hutchley very bouldery coarse sandy loam, 4 to 30 percent slopes—7 percent
- Inclusion 2: Argic Pachic Cryoborolls very bouldery sandy loam, 15 to 50 percent slopes—5 percent
- Inclusion 3: Cumulic Cryoborolls loam, 0 to 8 percent slopes—2 percent
- Inclusion 4: Cumulic Cryoborolls loam, 4 to 30 percent slopes—1 percent

### Characteristics of the Hastee Soil

*Classification:* Pachic Cryoborolls, sandy, mixed

*Position on landscape:* Slightly concave back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 50 to 75 percent

*Elevation:* 7,000 to 9,000 feet

*Dominant present vegetation:* Mountain big sagebrush, snowberry, mountain brome

### Climatic Data

*Average annual precipitation:* About 17 inches

*Average annual air temperature:* About 40 degrees F

*Frost-free period:* About 60 days

**Typical Profile**

*Surface cover:* Stones and boulders, 35 percent; pebbles, 5 percent

*Depth:* 0 to 17 inches

*Texture:* Extremely bouldery coarse sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Slightly acid

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 17 to 45 inches

*Texture:* Very stony loamy coarse sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Slightly acid or neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 45 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.3 to 6.4 inches

*Water-supplying capacity:* 16 to 18 inches

*Runoff:* Very rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.05; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

**Characteristics of the Granipeak Soil**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* South-facing, slightly concave or smooth back slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 50 percent

*Elevation:* 7,000 to 9,000 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

**Climatic Data**

*Average annual precipitation:* About 17 inches

*Average annual air temperature:* About 40 degrees F

*Frost-free period:* About 60 days

**Typical Profile**

*Surface cover:* Stones and boulders, 35 percent; cobbles, 5 percent; pebbles, 10 percent

*Depth:* 0 to 8 inches

*Texture:* Extremely bouldery coarse sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 8 to 41 inches

*Texture:* Very stony sandy clay loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 41 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 3.4 to 5.0 inches

*Water-supplying capacity:* 14 to 16 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.05; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Rock Outcrop**

*Position on landscape:* Crests and back slopes of mountains

*Kind of rock:* Granite

**Contrasting Inclusions****Inclusion 1**

*Classification:* Lithic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Crests and shoulders of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass

**Inclusion 2**

*Classification:* Argic Pachic Cryoborolls, loamy, mixed

*Position on landscape:* The lower, concave back slopes and toe slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, snowberry, mountain brome

#### **Inclusion 3**

*Classification:* Cumulic Cryoborolls

*Position on landscape:* Toe slopes and summits of mountains, adjacent to seeps

*Distinctive present vegetation:* Rubber rabbitbrush, rush, sedge

#### **Inclusion 4**

*Classification:* Cumulic Cryoborolls

*Position on landscape:* Concave back slopes of mountains, adjacent to seeps

*Distinctive present vegetation:* Quaking aspen, snowberry, mountain brome

### **Interpretive Groups**

*Capability classification:* Hastee and Granipeak soils—VIIs, nonirrigated; Rock outcrop—VIIIs

*Range site:* Hastee soil—023XY019NV; Granipeak soil—023XY050NV; Rock outcrop—none; Inclusion 1—023XY008NV; Inclusion 2—023XY019NV; Inclusion 3—023XY025NV; Inclusion 4—023XY028NV

## **1510—Greenbrae fine sandy loam, 4 to 15 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Alluvial fans

### **Composition**

*Major component:*

- Greenbrae fine sandy loam, 4 to 15 percent slopes—85 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids stony sandy loam, 4 to 15 percent slopes—9 percent
- Inclusion 2: Berit extremely bouldery coarse sandy loam, 15 to 50 percent slopes—5 percent
- Inclusion 3: Rock outcrop—1 percent

### **Characteristics of the Greenbrae Soil**

*Classification:* Xerollic Haplargids, fine-loamy, mixed, mesic

*Position on landscape:* Alluvial fans

*Parent material:* Granitic alluvium

*Slope range:* 4 to 15 percent

*Elevation:* 5,100 to 5,400 feet

*Dominant present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass, bluebunch wheatgrass

### **Climatic Data**

*Average annual precipitation:* About 10 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Pebbles, 25 percent

*Depth:* 0 to 6 inches

*Texture:* Fine sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 30 inches

*Texture:* Clay loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 30 to 60 inches

*Texture:* Loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.0 to 7.0 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—moderate

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic

*Position on landscape:* Pediments adjacent to alluvial fans

*Distinctive present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

**Inclusion 2**

*Classification:* Xerollic Haplargids, loamy-skeletal, mixed, mesic, shallow

*Position on landscape:* Hills adjacent to alluvial fans

*Distinctive present vegetation:* Utah juniper, purple sage, mountain big sagebrush

**Inclusion 3**

*Position on landscape:* Pediments and hills adjacent to alluvial fans

*Distinctive present vegetation:* None

**Interpretive Groups**

*Capability classification:* Greenbrae soil—IVe, irrigated; VIs, nonirrigated

*Range site:* Greenbrae soil—023XY020NV; Inclusion 1—023XY037NV; Inclusion 2—023XY036NV; Inclusion 3—none

**1520—Kaffur-Slocave-Rock outcrop association****Map Unit Setting**

*Position on landscape:* Mountains

**Composition**

*Major components:*

- Kaffur very stony sandy loam, 30 to 75 percent slopes—50 percent
- Slocave very stony sandy loam, 30 to 75 percent slopes—25 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents stony sandy loam, 30 to 75 percent slopes—5 percent
- Inclusion 2: Ceejay very stony sandy loam, 4 to 30 percent slopes—4 percent
- Inclusion 3: Lithic Torriorthents stony sandy loam, 15 to 50 percent slopes—1 percent

**Characteristics of the Kaffur Soil**

*Classification:* Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow

*Position on landscape:* North-facing side slopes of mountains at the middle and upper elevations

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 75 percent

*Elevation:* 4,800 to 5,800 feet

*Dominant present vegetation:* Utah juniper, Lahontan sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 90 days

**Typical Profile**

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 1 inch

*Texture:* Very stony sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 4 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 21 inches

*Texture:* Weathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.2 to 0.7 inch

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

**Characteristics of the Slocave Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic, shallow

*Position on landscape:* The lower and upper, south-facing side slopes of mountains

*Parent material:* Residuum and colluvium derived from granite

*Slope range:* 30 to 75 percent

*Elevation:* 4,800 to 5,800 feet

*Dominant present vegetation:* Littleleaf horsebrush, shadscale, desert needlegrass

**Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 110 days

**Typical Profile**

*Surface cover:* Stones and boulders, 10 percent;  
 cobbles, 5 percent

*Depth:* 0 to 1 inch

*Texture:* Very stony sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 1 to 7 inches

*Texture:* Very gravelly coarse sandy loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 7 to 27 inches

*Texture:* Weathered bedrock

*Depth:* 27 inches

*Texture:* Unweathered bedrock

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 14 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.3 to 1.0 inch

*Water-supplying capacity:* 4 to 6 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Rock Outcrop**

*Position on landscape:* Side slopes of mountains

*Kind of rock:* Granite

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Toe slopes of mountains

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic

*Position on landscape:* Crests and shoulders of volcanic hills

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower hills at the north end of the Fox Range

*Distinctive present vegetation:* Shadscale, desert needlegrass

**Interpretive Groups**

*Capability classification:* Kaffur and Slocave soils—VIIs, nonirrigated; Rock outcrop—VIIIs

*Range site:* Kaffur soil—023XY063NV; Slocave soil—027XY017NV; Rock outcrop—none; Inclusion 1—024XY002NV; Inclusion 2—023XY047NV; Inclusion 3—027XY027NV

**1530—Coppereid-Kreza association****Map Unit Setting**

*Position on landscape:* Mountains

**Composition**

*Major components:*

- Coppereid very gravelly sandy loam, 15 to 50 percent slopes, eroded—40 percent
- Coppereid very gravelly sandy loam, 15 to 50 percent slopes—25 percent
- Kreza gravelly loam, 4 to 30 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Jaybee cobbly sandy loam, 4 to 30 percent slopes—6 percent
- Inclusion 2: Sojur extremely channery loam, 30 to 75 percent slopes—5 percent
- Inclusion 3: Rock outcrop—3 percent
- Inclusion 4: Xeric Torriorthents very gravelly loam, 2 to 8 percent slopes—1 percent

**Characteristics of the Eroded Coppereid Soil**

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow

*Position on landscape:* Slightly convex back slopes of mountains

*Parent material:* Residuum and colluvium derived from shale

*Slope range:* 15 to 50 percent  
*Elevation:* 4,400 to 5,900 feet  
*Dominant present vegetation:* Lahontan sagebrush,  
 Sandberg bluegrass, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches  
*Texture:* Very gravelly sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 6 inches  
*Texture:* Gravelly loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 6 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 5 to 10 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.7 to 1.5 inches  
*Water-supplying capacity:* 6 to 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Uneroded Copperoid Soil**

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow  
*Position on landscape:* Convex back slopes of mountains  
*Parent material:* Residuum and colluvium derived from shale

*Slope range:* 15 to 50 percent  
*Elevation:* 4,400 to 5,900 feet  
*Dominant present vegetation:* Utah juniper, Lahontan sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 60 percent

*Depth:* 0 to 2 inches  
*Texture:* Very gravelly sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 9 inches  
*Texture:* Gravelly loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 9 inches  
*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 5 to 10 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.7 to 1.5 inches  
*Water-supplying capacity:* 6 to 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

#### **Characteristics of the Kreza Soil**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* Crests and shoulders of mountains  
*Parent material:* Residuum and colluvium derived from shale

*Slope range:* 4 to 30 percent  
*Elevation:* 4,400 to 5,900 feet  
*Dominant present vegetation:* Lahontan sagebrush,  
 Sandberg bluegrass, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

#### **Typical Profile**

*Surface cover:* Pebbles, 30 percent

*Depth:* 0 to 1 inch  
*Texture:* Gravelly loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 1 to 5 inches  
*Texture:* Gravelly loam  
*Structure:* Subangular blocky  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 5 inches  
*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to bedrock:* 4 to 10 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.5 to 1.2 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Lithic Xerollic Haplargids, loamy, mixed, mesic  
*Position on landscape:* Crests and shoulders of mountains of volcanic rock

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower, south- and west-facing back slopes of hills and mountains

*Distinctive present vegetation:* Shadscale, desert needlegrass

##### **Inclusion 3**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

##### **Inclusion 4**

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Channels cut into toe slopes of mountains

*Distinctive present vegetation:* Big sagebrush, rabbitbrush, spiny hopsage

#### **Interpretive Groups**

*Capability classification:* Coppereid and Kreza soils—VIIIs, nonirrigated

*Range site:* The eroded Coppereid soil—023XY047NV; the uneroded Coppereid soil—023XY063NV; Kreza soil—023XY047NV; Inclusion 1—023XY047NV; Inclusion 2—027XY027NV; Inclusion 3—none; Inclusion 4—027XY029NV

### **1540—Foxcan-Sojur-Rock outcrop association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

#### **Composition**

*Major components:*

- Foxcan very gravelly loam, 50 to 75 percent slopes—40 percent
- Sojur extremely channery loam, 50 to 75 percent slopes—30 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Coppereid very gravelly loam, 8 to 50 percent slopes—6 percent
- Inclusion 2: Sojur extremely channery loam, 15 to 50 percent slopes—4 percent
- Inclusion 3: Foxcan very gravelly loam, 15 to 50 percent slopes—3 percent
- Inclusion 4: Xeric Torriorthents very gravelly loam, 2 to 15 percent slopes—2 percent

### **Characteristics of the Foxcan Soil**

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow

*Position on landscape:* North-facing back slopes of mountains at the middle and upper elevations

*Parent material:* Residuum and colluvium derived from shale

*Slope range:* 50 to 75 percent

*Elevation:* 5,000 to 6,000 feet

*Dominant present vegetation:* Utah juniper, purple sage, mountain big sagebrush

#### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free period:* About 90 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 1 inch

*Texture:* Very gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 1 to 5 inches

*Texture:* Gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 5 to 21 inches

*Texture:* Weathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.3 to 1.1 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—high; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Sojur Soil**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The lower back slopes and the upper, south-facing back slopes of mountains at middle elevations

*Parent material:* Residuum and colluvium derived from shale

*Slope range:* 50 to 75 percent

*Elevation:* 4,400 to 5,000 feet

*Dominant present vegetation:* Shadscale, desert needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 4 inches

*Texture:* Extremely channery loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 4 to 15 inches

*Texture:* Weathered bedrock

*Depth:* 15 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 4 to 10 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.2 to 0.8 inch

*Water-supplying capacity:* 3 to 5 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Summits and side slopes of mountains

*Kind of rock:* Shale

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow

*Position on landscape:* Shoulders and back slopes of mountains

*Distinctive present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Side slopes of mountains

*Distinctive present vegetation:* Shadscale, desert needlegrass

#### **Inclusion 3**

*Classification:* Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow

## **1550—Wylo-Ister association**

### **Map Unit Setting**

*Position on landscape:* Mountains

### **Composition**

*Major components:*

- Wylo very stony loam, 30 to 50 percent slopes—55 percent
- Ister very stony loam, 30 to 50 percent slopes—30 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls stony loam, 30 to 50 percent slopes—6 percent
- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Lithic Xerollic Haplargids stony loam, 4 to 30 percent slopes—3 percent
- Inclusion 4: Skedaddle stony loam, 30 to 75 percent slopes—2 percent

### **Characteristics of the Wylo Soil**

*Classification:* Lithic Argixerolls, clayey, montmorillonitic, mesic

*Position on landscape:* Slightly convex shoulders and back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 30 to 50 percent

*Elevation:* 6,000 to 7,600 feet

*Dominant present vegetation:* Lahontan sagebrush, bluebunch wheatgrass, Hooker balsamroot

### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free period:* About 80 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 7 percent; cobbles, 5 percent; pebbles, 45 percent

*Depth:* 0 to 4 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 15 inches

*Texture:* Gravelly clay loam, gravelly clay

*Structure:* Prismatic parting to angular blocky

*Consistence:* Very hard, friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 15 inches

*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.6 inches

*Water-supplying capacity:* 9 to 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Low

### **Characteristics of the Ister Soil**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Slightly concave, north- and east-facing back slopes of mountains

*Parent material:* Residuum and colluvium derived from basalt or andesite

*Slope range:* 30 to 50 percent

*Elevation:* 6,000 to 7,600 feet

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Stones and boulders, 15 percent; pebbles, 35 percent

*Depth:* 0 to 6 inches

*Texture:* Very stony loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 29 inches

*Texture:* Very stony clay loam

*Structure:* Subangular blocky

*Consistence:* Hard, friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 29 inches

*Texture:* Unweathered bedrock

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.7 to 4.3 inches

*Water-supplying capacity:* 10 to 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—moderate; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, frigid

*Position on landscape:* Concave back slopes of mountains

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Crests and side slopes of mountains

*Distinctive present vegetation:* None

#### **Inclusion 3**

*Classification:* Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid

*Position on landscape:* Convex crests of mountains

*Distinctive present vegetation:* Low sagebrush, Sandberg bluegrass, Hooker balsamroot

#### **Inclusion 4**

*Classification:* Lithic Xeric Torriorthents, loamy-skeletal, mixed, nonacid, mesic

*Position on landscape:* Convex back slopes of mountains

*Distinctive present vegetation:* Purple sage, littleleaf horsebrush, desert needlegrass, bluebunch wheatgrass

### **Interpretive Groups**

*Capability classification:* Wylo and Ister soils—VIIs, nonirrigated

*Range site:* Wylo soil—023XY037NV; Ister soil—023XY039NV; Inclusion 1—023XY041NV; Inclusion 2—none; Inclusion 3—023XY021NV; Inclusion 4—023XY030NV

## **1552—Wylo-Bucklake association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

*Major components:*

- Wylo very stony loam, 4 to 30 percent slopes—70 percent
- Bucklake very stony loam, 15 to 30 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Pickup very stony loam, 15 to 50 percent slopes—5 percent
- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Lithic Xeric Torriorthents gravelly sandy loam, 15 to 50 percent slopes—3 percent
- Inclusion 4: Xeric Torriorthents very gravelly loamy sand, 2 to 15 percent slopes—3 percent

## **1560—Manogue-Ceejay association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

### **Composition**

*Major components:*

- Manogue very cobbly clay, 0 to 8 percent slopes—45 percent
- Ceejay very stony loam, 4 to 15 percent slopes—45 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—5 percent
- Inclusion 2: Tunnison cobbly clay, 0 to 8 percent slopes—5 percent

### **Characteristics of the Manogue Soil**

*Classification:* Entic Chromoxererts, fine, montmorillonitic, mesic

*Position on landscape:* Slightly concave summits of plateaus

*Parent material:* Residuum and colluvium derived from basalt

*Slope range:* 0 to 8 percent

*Elevation:* 4,400 to 5,600 feet

*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 1 percent; cobbles, 40 percent; pebbles, 10 percent

*Depth:* 0 to 4 inches

*Texture:* Very cobbly clay

*Structure:* Granular

*Consistence:* Hard, very firm

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 4 to 25 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Very hard, very firm

*Reaction:* Mildly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 25 to 47 inches

*Texture:* Clay

*Structure:* Prismatic

*Consistence:* Hard, firm

*Reaction:* Moderately alkaline

*Salinity:* 2 to 8 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 47 inches

*Texture:* Weathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 40 to 60 inches

*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 5.6 to 8.3 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### **Characteristics of the Ceejay Soil**

*Classification:* Lithic Xerollic Haplargids, clayey, montmorillonitic, mesic  
*Position on landscape:* Slightly convex summits and shoulders of plateaus  
*Parent material:* Residuum and colluvium derived from basalt  
*Slope range:* 4 to 15 percent  
*Elevation:* 4,400 to 5,600 feet  
*Dominant present vegetation:* Lahontan sagebrush, Sandberg bluegrass, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free period:* About 100 days

### **Typical Profile**

*Surface cover:* Stones and boulders, 10 percent; cobbles, 10 percent; pebbles, 40 percent

*Depth:* 0 to 2 inches  
*Texture:* Very stony loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 2 to 16 inches  
*Texture:* Cobbly clay, cobbly clay loam  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Hard, friable  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 4 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 16 inches  
*Texture:* Unweathered bedrock

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 14 to 20 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.8 to 2.6 inches  
*Water-supplying capacity:* 7 to 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Rims of plateaus  
*Distinctive present vegetation:* None

#### **Inclusion 2**

*Classification:* Entic Chromoxererts, very fine, montmorillonitic, mesic  
*Position on landscape:* Concave summits of plateaus  
*Distinctive present vegetation:* Rubber rabbitbrush, bottlebrush squirreltail, Hooker balsamroot

### **Interpretive Groups**

*Capability classification:* Manogue and Ceejay soils—VIIs, nonirrigated  
*Range site:* Manogue soil—023XY047NV; Ceejay soil—023XY047NV; Inclusion 1—none; Inclusion 2—023XY001NV

## **1570—Espil gravelly sandy loam, 2 to 15 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan piedmont remnants

### **Composition**

*Major component:*

- Espil gravelly sandy loam, 2 to 15 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Durixerolls gravelly loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Leviathan very gravelly sandy loam, 2 to 8 percent slopes—5 percent

### **Characteristics of the Espil Soil**

*Classification:* Aridic Durixerolls, loamy, mixed, frigid, shallow  
*Position on landscape:* Summits and shoulders of convex fan piedmont remnants  
*Parent material:* Alluvium derived from volcanic rocks

*Slope range:* 2 to 15 percent  
*Elevation:* 5,500 to 6,000 feet  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

#### **Climatic Data**

*Average annual precipitation:* About 11 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free period:* About 80 days

#### **Typical Profile**

*Surface cover:* Pebbles, 60 percent

*Depth:* 0 to 7 inches  
*Texture:* Gravelly sandy loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 7 to 10 inches  
*Texture:* Clay  
*Structure:* Prismatic parting to angular blocky  
*Consistence:* Hard, friable  
*Reaction:* Neutral  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 2

*Depth:* 10 to 14 inches  
*Texture:* Indurated hardpan

*Depth:* 14 to 60 inches  
*Texture:* Cemented hardpan

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Depth to a hardpan:* 8 to 14 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 0.8 to 1.3 inches  
*Water-supplying capacity:* 9 to 11 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—moderate; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Aridic Durixerolls, clayey, montmorillonitic, mesic, shallow  
*Position on landscape:* Concave fan piedmont remnants

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

##### **Inclusion 2**

*Classification:* Aridic Argixerolls, loamy-skeletal, mixed, mesic

*Position on landscape:* Inset fans

*Distinctive present vegetation:* Mountain big sagebrush, bottlebrush squirreltail, Thurber needlegrass

#### **Interpretive Groups**

*Capability classification:* Espil soil—VIIs, nonirrigated

*Range site:* Espil soil—023XY031NV; Inclusion 1—023XY020NV; Inclusion 2—023XY020NV

### **1580—Trocken-Ganaflan-Bluewing association**

#### **Map Unit Setting**

*Position on landscape:* Lake plain terraces, alluvial fans, and inset fans

#### **Composition**

*Major components:*

- Trocken very gravelly sandy loam, 4 to 15 percent slopes—45 percent
  - Ganaflan gravelly loam, 4 to 15 percent slopes—25 percent
  - Bluewing very gravelly loamy sand, 4 to 15 percent slopes—15 percent
- Contrasting inclusions:*
- Inclusion 1: Veta stony sandy loam, 2 to 15 percent slopes—6 percent
  - Inclusion 2: Rock outcrop—3 percent
  - Inclusion 3: Ruhe gravelly loamy sand, 4 to 15 percent slopes—3 percent
  - Inclusion 4: Smaug very fine sandy loam, 4 to 15 percent slopes—3 percent

#### **Characteristics of the Trocken Soil**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The higher lake plain terraces and alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 4 to 15 percent

*Elevation:* 4,000 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Pebbles, 40 percent

*Depth:* 0 to 3 inches

*Texture:* Very gravelly sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches

*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 2.4 to 3.6 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

**Characteristics of the Ganaflan Soil**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* The middle lake plain terraces adjacent to tufa outcrops

*Parent material:* Mixed lacustrine sediments and residuum derived from tufa

*Slope range:* 4 to 15 percent

*Elevation:* 4,000 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 30 percent

*Depth:* 0 to 4 inches

*Texture:* Gravelly loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 8 to 16 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 4 to 32 inches

*Texture:* Gravelly loam

*Structure:* Massive

*Consistence:* Hard, friable

*Reaction:* Strongly alkaline or very strongly alkaline

*Salinity:* 8 to 16 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 32 to 48 inches

*Texture:* Unweathered bedrock

*Depth:* 48 to 60 inches

*Texture:* Stratified sand and gravelly sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 6

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Depth to bedrock:* 20 to 40 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 3.5 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—moderate

*Potential for frost action:* Low

**Characteristics of the Bluewing Soil**

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans and inset fans

*Parent material:* Mixed alluvium

*Slope range:* 4 to 15 percent

*Elevation:* 4,000 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Cobbles, 5 percent; pebbles, 35 percent

*Depth:* 0 to 7 inches

*Texture:* Very gravelly loamy sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 7 to 60 inches

*Texture:* Stratified very gravelly coarse sand to extremely gravelly sand

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Very rapid

*Available water capacity:* 2.4 to 3.7 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Alluvial fans

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 2

*Position on landscape:* Lake plains

*Distinctive present vegetation:* None

#### Inclusion 3

*Classification:* Typic Torripsamments, mixed, mesic, shallow

*Position on landscape:* Lake plain terraces adjacent to tufa outcrops

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### Inclusion 4

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

### Interpretive Groups

*Capability classification:* Trocken, Ganaflan, and Bluewing soils—VIIIs, nonirrigated

*Range site:* Trocken soil—027XY013NV; Ganaflan soil—027XY013NV; Bluewing soil—027XY013NV; Inclusion 1—023XY038NV; Inclusion 2—none; Inclusion 3—027XY009NV; Inclusion 4—024XY004NV

## 1581—Trocken-Mazuma-Hawsley association

### Map Unit Setting

*Position on landscape:* Alluvial fans, lake plain terraces, and sand sheets

### Composition

*Major components:*

- Trocken very stony sandy loam, 2 to 8 percent slopes—40 percent
  - Mazuma fine sandy loam, 2 to 8 percent slopes—30 percent
  - Hawsley fine sand, 2 to 8 percent slopes—15 percent
- Contrasting inclusions:*
- Inclusion 1: Isolde fine sand, 4 to 15 percent slopes—5 percent
  - Inclusion 2: Veta very stony sandy loam, 2 to 8 percent slopes—5 percent
  - Inclusion 3: Durixerollic Camborthids very fine sandy loam, 2 to 8 percent slopes—5 percent

### Characteristics of the Trocken Soil

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Convex alluvial fans, predominantly at the middle and upper elevations

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Surface cover:* Stones and boulders, 5 percent; cobbles, 5 percent; pebbles, 20 percent

*Depth:* 0 to 3 inches

*Texture:* Very stony sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 6

*Depth:* 3 to 60 inches

*Texture:* Stratified very gravelly coarse sandy loam to gravelly loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Moderately alkaline

*Salinity:* 2 to 4 mmhos per cm

*Sodicity:* SAR less than 6

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 3.0 to 4.8 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### Characteristics of the Mazuma Soil

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Broad crests of dissected lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 8 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### Characteristics of the Hawsley Soil

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on alluvial fans and lake terraces

*Parent material:* Mixed alluvium and water-reworked sandy eolian deposits

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

### Climatic Data

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### Typical Profile

*Depth:* 0 to 8 inches

*Texture:* Fine sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 8 to 42 inches  
*Texture:* Stratified fine sand and sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 42 to 60 inches  
*Texture:* Fine sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

### Soil and Water Features

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very rapid  
*Available water capacity:* 3.6 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—1  
*Hazard of erosion:* By water—slight; by wind—high  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Dunes  
*Distinctive present vegetation:* Black greasewood, Indian ricegrass

#### Inclusion 2

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic  
*Position on landscape:* Inset fans  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 3

*Classification:* Durixerollic Camborthids, coarse-loamy, mixed, mesic  
*Position on landscape:* Inset fans and side slopes of lake plain terraces adjacent to channels  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### Interpretive Groups

*Capability classification:* Mazuma soil—IIIe, Hawsley soil—IVs, irrigated; Trocken and Hawsley soils—VIIs, Mazuma soil—VIIc, nonirrigated  
*Range site:* Trocken soil—024XY002NV; Mazuma soil—024XY002NV; Hawsley soil—027XY009NV; Inclusion 1—027XY016NV; Inclusion 2—023XY038NV; Inclusion 3—023XY038NV

### 1590—Typic Torriorthents-Ragtown association

#### Map Unit Setting

*Position on landscape:* Lake plain terraces

#### Composition

*Major components:*

- Typic Torriorthents very gravelly coarse sand, 4 to 15 percent slopes—60 percent
- Ragtown silty clay loam, 0 to 2 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents very stony sand, 2 to 8 percent slopes—8 percent
- Inclusion 2: Umberland silty clay loam, 0 to 2 percent slopes—3 percent
- Inclusion 3: Typic Haplaquolls silt loam, 0 to 2 percent slopes—2 percent
- Inclusion 4: Rock outcrop—2 percent

#### Characteristics of the Typic Torriorthents

*Classification:* Typic Torriorthents  
*Position on landscape:* The middle lake plain terraces  
*Parent material:* Water-reworked alluvium  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,800 to 4,100 feet  
*Dominant present vegetation:* Rabbitbrush, black greasewood, inland saltgrass, Indian ricegrass, seepweed, desert needlegrass

#### Climatic Data

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### Typical Profile

*Surface cover:* Cobbles, 20 percent; pebbles, 60 percent  
*Depth:* 0 to 5 inches  
*Texture:* Very gravelly coarse sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 5 to 60 inches  
*Texture:* Extremely gravelly sand, gravelly sand  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 13

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Rapid  
*Available water capacity:* 1.8 to 2.7 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Medium  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Characteristics of the Ragtown Soil**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Parent material:* Lacustrine sediments  
*Slope range:* 0 to 2 percent  
*Elevation:* 3,800 to 4,100 feet  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

#### **Climatic Data**

*Average annual precipitation:* About 6 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 10 inches  
*Texture:* Silty clay loam  
*Structure:* Platy  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 23

*Depth:* 10 to 23 inches  
*Texture:* Clay loam  
*Structure:* Massive  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

*Depth:* 23 to 60 inches  
*Texture:* Clay  
*Structure:* Massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* More than 16 mmhos per cm  
*Sodicity:* SAR more than 68

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 9.7 to 11.3 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Fan aprons adjacent to lake plain terraces  
*Distinctive present vegetation:* Black greasewood, shadscale, Indian ricegrass, inland saltgrass

##### **Inclusion 2**

*Classification:* Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces  
*Distinctive present vegetation:* Alkali bluegrass, alkali sacaton, Baltic rush

##### **Inclusion 3**

*Classification:* Typic Haplaquolls, fine-silty, mixed (calcareous), mesic  
*Position on landscape:* The lower lake plain terraces adjacent to seeps  
*Distinctive present vegetation:* Nevada bluegrass, meadow barley

##### **Inclusion 4**

*Position on landscape:* Lake plains  
*Distinctive present vegetation:* None

#### **Interpretive Groups**

*Capability classification:* Typic Torriorthents and Ragtown soil—VIIs, nonirrigated  
*Range site:* Typic Torriorthents—none; Ragtown soil—027XY025NV; Inclusion 1—none; Inclusion 2—

024XY043NV; Inclusion 3—026XY003NV; Inclusion 4—none

## 1600—Dithod loam

### **Map Unit Setting**

*Position on landscape:* Stream terraces

### **Composition**

*Major component:*

- Dithod loam, 0 to 2 percent slopes—90 percent

*Contrasting inclusions:*

- Inclusion 1: Fluvaquents very gravelly loamy coarse sand, 0 to 2 percent slopes—7 percent
- Inclusion 2: Veta gravelly sandy loam, 0 to 2 percent slopes—3 percent

### **Characteristics of the Dithod Soil**

*Classification:* Fluvaquentic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 4,300 to 4,400 feet

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 10 inches

*Texture:* Loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 40 inches

*Texture:* Stratified fine sandy loam to loam

*Structure:* Prismatic

*Consistence:* Hard, friable

*Reaction:* Neutral to moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 40 to 60 inches

*Texture:* Sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Flooding:* Frequency—occasional; duration—very brief; months—November through June

*Permeability:* Moderately slow

*Available water capacity:* 8.0 to 9.0 inches

*Water-supplying capacity:* 12 to 14 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Fluvaquents

*Position on landscape:* Stream channels

*Distinctive present vegetation:* Willow, cottonwood, basin big sagebrush

#### **Inclusion 2**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* Fanlettes adjacent to lake plain terraces

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Dithod soil—Ilw, irrigated; VIw, nonirrigated

*Range site:* Dithod soil—023XY005NV; Inclusion 1—023XY034NV; Inclusion 2—023XY038NV

## 1601—Dithod-Fluvaquents association

### **Map Unit Setting**

*Position on landscape:* Stream terraces and stream channels

### **Composition**

*Major components:*

- Dithod loam, 0 to 2 percent slopes—65 percent
- Fluvaquents very gravelly coarse sand, 0 to 4 percent slopes—25 percent

*Contrasting inclusions:*

- Inclusion 1: Cumulic Haploxerolls gravelly loam, 2 to 8 percent slopes—8 percent

- Inclusion 2: Typic Torriorthents very gravelly sandy loam, 2 to 8 percent slopes—2 percent

### **Characteristics of the Dithod Soil**

*Classification:* Fluvaquentic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces

*Parent material:* Mixed alluvium

*Slope range:* 0 to 2 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Pebbles, 15 percent

*Depth:* 0 to 10 inches

*Texture:* Loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 10 to 40 inches

*Texture:* Stratified fine sandy loam to loam

*Structure:* Prismatic

*Consistence:* Hard, friable

*Reaction:* Neutral to moderately alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 40 to 60 inches

*Texture:* Sand

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Neutral

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Flooding:* Frequency—occasional; duration—very brief; months—November through June

*Permeability:* Moderately slow

*Available water capacity:* 8.0 to 9.0 inches

*Water-supplying capacity:* 12 to 14 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* Steel—high; concrete—low

*Potential for frost action:* Moderate

### **Characteristics of the Fluvaquents**

*Classification:* Fluvaquents

*Position on landscape:* Stream channels

*Parent material:* Mixed alluvium

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,400 feet

*Dominant present vegetation:* Willow, cottonwood, basin big sagebrush

### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 110 days

### **Typical Profile**

*Surface cover:* Cobbles, 5 percent; pebbles, 50 percent

*Depth:* 0 to 6 inches

*Texture:* Very gravelly coarse sand

*Structure:* Single grained

*Consistence:* Loose

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 60 inches

*Texture:* Stratified very gravelly coarse sand to clay loam

*Structure:* Massive

*Consistence:* Slightly hard, very friable

*Reaction:* Moderately alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through August

*Permeability:* Moderate

*Available water capacity:* 2.3 to 5.7 inches

*Water-supplying capacity:* 14 to 18 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Cumulic Haploxerolls, fine-loamy, mixed, mesic

*Position on landscape:* Stream terraces

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### **Inclusion 2**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Fanlettes adjacent to stream terraces

*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Interpretive Groups**

*Capability classification:* Dithod soil—IIw, irrigated; Dithod soil—VIw, Fluvaquents—VIIw, nonirrigated  
*Range site:* Dithod soil—023XY005NV; Fluvaquents—023XY034NV; Inclusion 1—023XY009NV; Inclusion 2—024XY003NV

## **1620—Mazuma-Hawsley association**

### **Map Unit Setting**

*Position on landscape:* Lake plain terraces, lagoons, and sand sheets

### **Composition**

*Major components:*

- Mazuma very fine sandy loam, 4 to 8 percent slopes—50 percent
- Mazuma fine sandy loam, 0 to 4 percent slopes—20 percent
- Hawsley loamy sand, 4 to 15 percent slopes—15 percent

*Contrasting inclusions:*

- Inclusion 1: Trocken gravelly sandy loam, 2 to 4 percent slopes—4 percent
- Inclusion 2: Duric Camborthids loam, 2 to 15 percent slopes—4 percent
- Inclusion 3: Duric Camborthids fine sandy loam, 8 to 30 percent slopes—4 percent
- Inclusion 4: Typic Torriorthents silt loam, 2 to 8 percent slopes—3 percent

### **Characteristics of the Mazuma Soil, 4 to 8 Percent Slopes**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Smooth to slightly concave lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 4 to 8 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

### **Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Very fine sandy loam

*Structure:* Platy

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.2 to 8.4 inches

*Water-supplying capacity:* 5 to 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Characteristics of the Mazuma Soil, 0 to 4 Percent Slopes**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Smooth to slightly concave lagoons and lake plain terraces

*Parent material:* Loamy lacustrine material

*Slope range:* 0 to 4 percent

*Elevation:* 3,900 to 4,200 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Fine sandy loam  
*Structure:* Platy  
*Consistence:* Soft, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 4 mmhos per cm  
*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches  
*Texture:* Stratified loamy fine sand to silt loam  
*Structure:* Platy, single grained, or massive  
*Consistence:* Slightly hard, very friable  
*Reaction:* Strongly alkaline  
*Salinity:* 4 to 16 mmhos per cm

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—high  
*Potential for frost action:* Low

#### **Characteristics of the Hawsley Soil**

*Classification:* Typic Torripsamments, mixed, mesic  
*Position on landscape:* Sand sheet superimposed on lake plain terraces  
*Parent material:* Mixed alluvium and water-reworked eolian deposits  
*Slope range:* 4 to 15 percent  
*Elevation:* 3,900 to 4,200 feet  
*Dominant present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Climatic Data**

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 51 degrees F  
*Frost-free period:* About 120 days

#### **Typical Profile**

*Depth:* 0 to 8 inches  
*Texture:* Loamy sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 8 to 42 inches  
*Texture:* Stratified fine sand and sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Moderately alkaline or strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

*Depth:* 42 to 60 inches  
*Texture:* Fine sand  
*Structure:* Single grained  
*Consistence:* Loose  
*Reaction:* Strongly alkaline  
*Salinity:* Less than 2 mmhos per cm  
*Sodicity:* SAR less than 6

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very rapid  
*Available water capacity:* 3.6 to 4.8 inches  
*Water-supplying capacity:* 5 to 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—2  
*Hazard of erosion:* By water—slight; by wind—moderate  
*Shrink-swell potential:* Low  
*Corrosivity:* Steel—high; concrete—low  
*Potential for frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic  
*Position on landscape:* The upper lake plain terraces  
*Distinctive present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

##### **Inclusion 2**

*Classification:* Duric Camborthids, sandy-skeletal, mixed, mesic  
*Position on landscape:* Summits and side slopes of offshore-bars adjacent to lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Duric Camborthids, coarse-loamy, mixed, mesic

*Position on landscape:* The middle side slopes of fan piedmont remnants adjacent to lake plain terraces

*Distinctive present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

**Inclusion 4**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Dissected beach terrace remnants adjacent to lake plain terraces and lagoons

*Distinctive present vegetation:* Bud sagebrush, winterfat, shadscale, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Mazuma soil, 4 to 8 percent slopes—IIle, Mazuma soil, 0 to 4 percent slopes—IIe, Hawsley soil—IVs, irrigated; Mazuma soils—VIIc, Hawsley soil—VIIs, nonirrigated

*Range site:* Mazuma soil, 4 to 8 percent slopes—024XY002NV; Mazuma soil, 0 to 4 percent slopes—024XY002NV; Hawsley soil—027XY009NV; Inclusion 1—024XY014NV; Inclusion 2—024XY002NV; Inclusion 3—024XY014NV; Inclusion 4—024XY014NV

**1621—Mazuma, clayey substratum association****Map Unit Setting**

*Position on landscape:* Lake plain terrace remnants

**Composition**

*Major components:*

- Mazuma fine sandy loam, 2 to 8 percent slopes—65 percent
  - Mazuma loam, 0 to 4 percent slopes—20 percent
- Contrasting inclusions:*
- Inclusion 1: Smaug very fine sandy loam, 2 to 15 percent slopes—7 percent
  - Inclusion 2: Ganaflan gravelly loam, 2 to 8 percent slopes—4 percent
  - Inclusion 3: Ragtown very fine sandy loam, 0 to 2 percent slopes—2 percent
  - Inclusion 4: Xeric Torriorthents sandy loam, 2 to 8 percent slopes—2 percent

**Characteristics of Mazuma Fine Sandy Loam**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic

*Position on landscape:* Slightly convex or smooth lake plain terrace remnants

*Parent material:* Loamy lacustrine material

*Slope range:* 2 to 8 percent

*Elevation:* 3,900 to 4,000 feet

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Climatic Data**

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 51 degrees F

*Frost-free period:* About 120 days

**Typical Profile**

*Depth:* 0 to 8 inches

*Texture:* Fine sandy loam

*Structure:* Platy

*Consistence:* Soft, very friable

*Reaction:* Strongly alkaline

*Salinity:* Less than 4 mmhos per cm

*Sodicity:* SAR less than 13

*Depth:* 8 to 60 inches

*Texture:* Stratified loamy fine sand to silt loam

*Structure:* Platy, single grained, or massive

*Consistence:* Slightly hard, very friable

*Reaction:* Strongly alkaline

*Salinity:* 4 to 16 mmhos per cm

*Sodicity:* SAR 13 to 23

**Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Potential for frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic  
*Position on landscape:* Beach terraces adjacent to lake plain terrace remnants at the higher elevations  
*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

**Inclusion 2**

*Classification:* Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic  
*Position on landscape:* Lake plain terraces  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Inclusion 3**

*Classification:* Typic Torriorthents, fine, montmorillonitic (calcareous), mesic  
*Position on landscape:* Lake plain terraces at the lowest elevations  
*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

**Inclusion 4**

*Classification:* Xeric Torriorthents, sandy-skeletal, mixed, mesic  
*Position on landscape:* Channels cut into lake plain terrace remnants  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Interpretive Groups**

*Capability classification:* Mazuma fine sandy loam—IIIe, irrigated; Mazuma soils—VIIc, nonirrigated  
*Range site:* Mazuma fine sandy loam—024XY002NV; Mazuma loam, clayey substratum—024XY002NV; Inclusion 1—024XY004NV; Inclusion 2—024XY002NV; Inclusion 3—024XY003NV; Inclusion 4—024XY020NV

**1630—Veta-Mazuma association****Map Unit Setting**

*Position on landscape:* Alluvial fans, lake plain terraces, and fan skirts

**Composition***Major components:*

- Veta very gravelly sandy loam, 2 to 8 percent slopes—45 percent
- Mazuma fine sandy loam, 2 to 8 percent slopes—20 percent
- Mazuma fine sandy loam, 0 to 4 percent slopes—20 percent

*Contrasting inclusions:*

- Inclusion 1: Trocken very gravelly sandy loam, 2 to 8 percent slopes—5 percent
- Inclusion 2: Smaug very fine sandy loam, 2 to 8 percent slopes—4 percent
- Inclusion 3: Hawsley fine sand, 2 to 8 percent slopes—3 percent
- Inclusion 4: Lithic Torriorthents very stony sandy loam, 8 to 30 percent slopes—3 percent

### **Characteristics of the Veta Soil**

*Classification:* Xerollic Camborthids, loamy-skeletal, mixed, mesic

*Position on landscape:* The higher alluvial fans

*Parent material:* Mixed alluvium

*Slope range:* 2 to 8 percent

*Elevation:* 4,100 to 4,400 feet

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Climatic Data**

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free period:* About 110 days

#### **Typical Profile**

*Surface cover:* Pebbles, 45 percent

*Depth:* 0 to 6 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 6 to 18 inches

*Texture:* Very gravelly sandy loam

*Structure:* Subangular blocky

*Consistence:* Slightly hard, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

*Depth:* 18 to 60 inches

*Texture:* Stratified extremely gravelly loamy sand to very gravelly sandy loam

*Structure:* Massive

*Consistence:* Soft, very friable

*Reaction:* Mildly alkaline

*Salinity:* Less than 2 mmhos per cm

*Sodicity:* SAR less than 2

#### **Soil and Water Features**

*Depth to a seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately rapid

*Available water capacity:* 3.0 to 4.0 inches

*Water-supplying capacity:* 7 to 9 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* Steel—high; concrete—high

*Potential for frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Classification:* Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* The middle alluvial fans

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Classification:* Typic Torriorthents, coarse-silty, mixed (calcareous), mesic

*Position on landscape:* Lake plain terraces

*Distinctive present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Classification:* Typic Torripsamments, mixed, mesic

*Position on landscape:* Sand sheets superimposed on lake plain terraces and alluvial fans

*Distinctive present vegetation:* Littleleaf horsebrush, Nevada dalea, fourwing saltbush, Indian ricegrass

#### **Inclusion 4**

*Classification:* Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic

*Position on landscape:* Rock pediments adjacent to rock outcrops on alluvial fans and lake plain terraces

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Interpretive Groups**

*Capability classification:* Veta soil—IVs, Mazuma soil—IIIe, irrigated; Veta soil and the moderately saline Mazuma soil—VIIs, and the other Mazuma soil—VIIc, nonirrigated

*Range site:* Veta soil—023XY038NV; Mazuma soil—024XY002NV; the moderately saline Mazuma soil—024XY003NV; Inclusion 1—024XY002NV; Inclusion 2—024XY004NV; Inclusion 3—027XY009NV; Inclusion 4—024XY002NV

### **Prime Farmland**

In this section, prime farmland is defined and the soils in the survey area that are considered prime farmland are listed.

Prime farmland is of major importance in meeting the Nation's short- and long-range needs for food and fiber. The acreage of high-quality farmland is limited, and the U.S. Department of Agriculture recognizes that government at local, State, and Federal levels, as well as individuals, must encourage and facilitate the wise use of our Nation's prime farmland.

Prime farmland soils, as defined by the U.S. Department of Agriculture, are soils that are best suited to food, seed, forage, fiber, and oilseed crops. Such soils have properties that favor the economic production

of sustained high yields of crops. The soils need only to be treated and managed by acceptable farming methods. An adequate moisture supply and a sufficiently long growing season are required. Prime farmland soils produce the highest yields with minimal expenditure of energy and economic resources, and farming these soils results in the least damage to the environment.

Prime farmland soils either are used for food or fiber or are available for these uses. Urban or built-up land and water areas cannot be considered prime farmland.

Prime farmland soils commonly receive an adequate and dependable supply of moisture from precipitation or irrigation. The temperature and length of growing season are favorable, and the level of acidity or alkalinity is acceptable. The soils have few, if any, rocks and are permeable to water and air. They are not excessively erodible or saturated with water for long periods and are not frequently flooded during the growing season. The slope is mainly 0 to 6 percent.

Soils that have a high water table, are subject to flooding, or are droughty may qualify as prime farmland soils where these limitations are overcome by drainage systems, flood control, or irrigation. Onsite evaluation is necessary to determine the effectiveness of corrective measures. More information about the criteria for prime farmland can be obtained at the local office of the Natural Resources Conservation Service.

A recent trend in land use has been the conversion of prime farmland to urban and industrial uses. The loss of prime farmland to other uses puts pressure on lands that are less productive than prime farmland.

The following map units meet the soil requirements

for prime farmland when irrigated. On some soils included in the list, measures that overcome a hazard or limitation, such as flooding, wetness, and droughtiness, are needed. The location of each map unit is shown on the detailed soil maps at the back of this publication. The soil qualities that affect use and management are described in the section "Detailed Soil Map Units." This list does not constitute a recommendation for a particular land use.

- 616 Haybourne sandy loam, 2 to 8 percent slopes
- 910 Shawave-Deadyon association
- 1270 Deadyon sandy loam, 4 to 8 percent slopes
- 1600 Dithod loam

The following map units have a component that meets the requirements for prime farmland when irrigated. The percentage after the name of the map unit indicates the portion of the component in the unit. On some soils included in the list, management practices may have been used to overcome a hazard or limitation, such as salinity, flooding, wetness, or droughtiness.

- 611 The Haybourne part of Haybourne-Zorravista-Fulstone association—45 percent
- 615 The Haybourne part of Haybourne-Dun Glen association—55 percent
- 621 The Haybourne part of Leviathan-Springmeyer-Haybourne association—15 percent
- 1601 The Dithod part of Dithod-Fluvaquents association—65 percent

# Accessibility Statement

---

This document is not accessible by screen-reader software. The Natural Resources Conservation Service (NRCS) is committed to making its information accessible to all of its customers and employees. If you are experiencing accessibility issues and need assistance, please contact our Helpdesk by phone at (800) 457-3642 or by e-mail at [ServiceDesk-FTC@ftc.usda.gov](mailto:ServiceDesk-FTC@ftc.usda.gov). For assistance with publications that include maps, graphs, or similar forms of information, you may also wish to contact our State or local office. You can locate the correct office and phone number at <http://offices.sc.egov.usda.gov/locator/app>.

## Nondiscrimination Statement

### Nondiscrimination Policy

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, whether all or part of an individual's income is derived from any public assistance program, or protected genetic information. The Department prohibits discrimination in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases apply to all programs and/or employment activities.)

### To File an Employment Complaint

If you wish to file an employment complaint, you must contact your agency's EEO Counselor (<http://directives.sc.egov.usda.gov/33081.wba>) within 45 days of the date of the alleged discriminatory act, event, or personnel action. Additional information can be found online at [http://www.ascr.usda.gov/complaint\\_filing\\_file.html](http://www.ascr.usda.gov/complaint_filing_file.html).

### To File a Program Complaint

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found online at [http://www.ascr.usda.gov/complaint\\_filing\\_cust.html](http://www.ascr.usda.gov/complaint_filing_cust.html) or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter by mail to U.S. Department of Agriculture; Director, Office of Adjudication; 1400 Independence Avenue, S.W.; Washington, D.C. 20250-9419; by fax to (202) 690-7442; or by email to [program.intake@usda.gov](mailto:program.intake@usda.gov).

### Persons with Disabilities

If you are deaf, are hard of hearing, or have speech disabilities and you wish to file either an EEO or program complaint, please contact USDA through the Federal Relay Service at (800) 877-8339 or (800) 845-6136 (in Spanish).

If you have other disabilities and wish to file a program complaint, please see the contact information above. If you require alternative means of communication for

---

program information (e.g., Braille, large print, audiotape, etc.), please contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

**Supplemental Nutrition Assistance Program**

For additional information dealing with Supplemental Nutrition Assistance Program (SNAP) issues, call either the USDA SNAP Hotline Number at (800) 221-5689, which is also in Spanish, or the State Information/Hotline Numbers (<http://directives.sc.egov.usda.gov/33085.wba>).

**All Other Inquiries**

For information not pertaining to civil rights, please refer to the listing of the USDA Agencies and Offices (<http://directives.sc.egov.usda.gov/33086.wba>).
