Northeast Pasture Consortium

Supporting farmers and their communities

Who we are

The *Northeast Pasture Consortium* is dedicated to promoting and supporting grass-based livestock farming. The Consortium is a group of farmers, *Land Grant University* (LGU) researchers, Extension specialists, *Agricultural Research Service* (ARS) and *Natural Resources Conservation Service* (NRCS) personnel, and agribusiness professionals devoted to promoting pasture-based research, education, and technical assistance to help grassland and pasture-based farmers remain environmentally sustainable and economically viable throughout the Northeastern US.

What we do

Our goal is to support farmers and their agricultural communities, and to keep farms active, financially viable, and green. We define work and research priorities and needs toward this goal. Through the Consortium, we gather and share information on topics that move grazing forward, keeping it sustainable, and improving its profitability and viability.

We have worked to increase on-farm technical assistance for grazing management, advance educational opportunities for farmers and agricultural professionals, and direct research dollars toward topics that address the most critical issues for farm sustainability. Topics that we have promoted have ranged from raw milk to climate change, from forage and soil and water quality to mixed rations and farm economics.

How you can help

We invite you to join the conversation. Help identify the needs of grass-based agriculture, and work with us towards supporting efforts in those areas. With your assistance, we can keep grass-based livestock farming moving forward in this changing world.

Email or call us through our contacts listed on the back. To read more about work we have done, visit our website, www.GrazingGuide.net. We look forward to hearing from you!
