

ACEP

Agricultural Conservation Easement Program

Overview

The Agricultural Conservation Easement Program (ACEP) provides financial and technical assistance to help conserve agricultural lands and wetlands and their related benefits. The ACEP is a 2014 Farm Bill program that consolidates three former programs – the Wetlands Reserve Program, Grassland Reserve Program, and Farm and Ranch Lands Protection Program.

Under the agricultural land easements component, NRCS helps Indian tribes, state and local governments and non-governmental organizations protect working agricultural lands and limit non-agricultural uses of the land.

Under the wetland reserve easements component, NRCS helps to restore, protect and enhance enrolled wetlands.

Benefits

Agricultural land easements protect the long-term viability of the nation's food supply by preventing conversion of productive working lands to non-agricultural uses. Land protected by agricultural land easements provides additional public benefits, including enhanced environmental quality, historic preservation, wildlife habitat and protection of open space.

Wetland reserve easements provide habitat for fish and wildlife, including threatened and endangered species, improve water quality by filtering sediments and chemicals, reduce flooding, recharge groundwater, protect biological diversity and provide opportunities for educational, scientific and limited recreational activities.

Agricultural Land Easements

NRCS provides financial assistance to eligible partners for purchasing agricultural land easements that protect the agricultural use and conservation values of eligible land. In the case of working farms, the program helps farmers and ranchers keep their land in agriculture. The program also protects grazing uses and related conservation values by conserving grassland, including rangeland, pastureland and shrubland. Eligible partners include Indian tribes, state and local governments and non-governmental organizations that have farmland or grassland protection programs.

Under the agricultural land easements component, NRCS may contribute up to 50 percent of the fair market value of the agricultural land easement. Where NRCS determines that grasslands of special environmental significance will be protected, NRCS may contribute up to 75 percent of the fair market value of the agricultural land easement.

USDA's Natural Resources Conservation Service offers voluntary Farm Bill conservation programs that benefit agricultural producers and the environment.

How to Apply

Agricultural land easements – eligible partners may submit proposals to NRCS to acquire conservation easements on eligible land.

Wetland reserve easements – landowners may apply at any time at a local USDA Service Center.

More Information

For more information visit your local USDA Service Center or the NRCS Farm Bill website at www.nrcs.usda.gov/farmbill.

Wetland Reserve Easements

NRCS also provides technical and financial assistance directly to private landowners and Indian tribes to restore, protect, and enhance wetlands through the purchase of a wetland reserve easement. For acreage owned by an Indian tribe, there is an additional enrollment option of a 30-year contract.

Through the wetland reserve enrollment options, NRCS may enroll eligible land through:

- *Permanent Easements* are conservation easements in perpetuity. NRCS pays 100 percent of the easement value for the purchase of the easement, and 75 to 100 percent of the restoration costs.
- *30-Year Easements* expire after 30 years. Under 30-year easements, NRCS pays 50 to 75 percent of the easement value for the purchase of the easement, and 50 to 75 percent of the restoration costs.
- *30-Year Contracts* are only available to enroll acreage owned by Indian tribes. Program payment rates are commensurate with 30-year easements.

For wetland reserve easements, NRCS pays all costs associated with recording the easement in the local land records office, including recording fees, charges for abstracts, survey and appraisal fees, and title insurance.

Eligibility

Land eligible for agricultural land easements includes cropland, rangeland, grassland, pastureland and nonindustrial private forest land. NRCS will prioritize applications that protect agricultural uses and related conservation values of the land and those that maximize the protection of contiguous acres devoted to agricultural use.

Land eligible for wetland reserve easements includes farmed or converted wetlands that can be successfully and cost-effectively restored. NRCS will consider an easement's potential for protecting and enhancing habitat for migratory birds and other wildlife during the ranking process.

To enroll land through agricultural land easements, NRCS enters into cooperative agreements with eligible partners. Each easement is required to have an agricultural land easement plan that promotes the long-term viability of the land.

To enroll land through wetland reserve easements, NRCS enters into purchase agreements with eligible private landowners or Indian tribes that include the right for NRCS to develop and implement a wetland reserve restoration easement plan. This plan restores, protects, and enhances the wetland's functions and values.
