

Watershed Rehabilitation Status March 2015

Fiscal Year 2014 Funding

In 2014, project sponsors from 35 states submitted funding requests for rehabilitation of 790 dams totaling more than \$868.8 million. This level of funding request demonstrates the need for dam rehabilitation assistance throughout the country. As in past years, the funding requests far exceeded available funding. This funding is only for rehabilitation of aging dams constructed with assistance of the USDA Watershed Programs.

Congress appropriated \$12 million in discretionary funding for watershed rehabilitation in FY 2014. The 2014 Farm Bill provided an additional \$250 million of Commodity Credit Corporation (CCC) funds for the Watershed Rehabilitation program. This significant increase recognized the critical role of these watershed structures in flood management, water supply, erosion control, agricultural productivity, recreation and wildlife habitat. This funding helps to repair aging infrastructure, create jobs and commerce, and protects homes and families.

Funding provided in 2014 will result in 128 dams being rehabilitated in 26 states. Funds will be used for planning, design and construction. In addition, \$10.3 million dollars were utilized to complete assessments of 491 dams. The dams were selected for funding based on recent assessments that evaluated the condition of the dams and the potential risks to life and property if dam failure occurred.

* Funded with CCC funds authorized in the 2014 Farm Bill

There are multiple dams in some lines. These dams are in the same watershed, same county and have the same status:
Example: Brush Creek 9; 14; 15.
